Proceedings of SPIE, 0277-786X, v. 7782

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Author(s), "Title of Paper," in *The Nature of Light: Light in Nature III*, edited by Katherine Creath, Joseph A. Shaw, Proceedings of SPIE Vol. 7782 (SPIE, Bellingham, WA, 2010) Article CID Number.

Copying of material in this book for internal or personal use, or for the internal or personal use of specific clients, beyond the fair use provisions granted by the U.S. Copyright Law is authorized by SPIE subject to payment of copying fees. The Transactional Reporting Service base fee for this volume is \$18.00 per article (or portion thereof), which should be paid directly to the Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923. Payment may also be made electronically through CCC Online at copyright.com. Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/10/\$18.00.

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIE
Digital Library

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Contents

v	Conference Committee
vii	Introduction

SESSION 1 LEARNING FROM NATURE

- 7782 02 **Huygens, Macintosh, Dalí, and Medusa: polarization engineering (and more?) (Invited Paper)** [7782-01]
A. Lakhtakia, The Pennsylvania State Univ. (United States)
- 7782 03 **Light confinement in marine centric diatoms: main characteristics and wavelength dependence** [7782-02]
E. De Tommasi, I. Rea, V. Mocella, Institute for Microelectronics and Microsystems (Italy); L. Moretti, Second Univ. of Naples (Italy); M. De Stefano, Univ. of Naples Federico II (Italy); I. Rendina, L. De Stefano, Institute for Microelectronics and Microsystems (Italy)
- 7782 05 **Structural color in beetles of South America** [7782-04]
A. E. Luna, D. C. Skigin, M. E. Inchaussandague, Univ. de Buenos Aires (Argentina) and IFIBA, CONICET (Argentina); A. Roig Alsina, Museo Argentino de Ciencias Naturales (Argentina)

SESSION 2 LIGHT IN ART

- 7782 06 **High-resolution infrared imaging (Invited Paper)** [7782-06]
C. M. Falco, College of Optical Sciences, The Univ. of Arizona (United States)

SESSION 3 LIGHT IN PHYSICAL SYSTEMS

- 7782 07 **Linear and nonlinear control of ballistic trajectory of airy beams** [7782-13]
Y. Hu, San Francisco State Univ. (United States) and Nankai Univ. (China); P. Zhang, S. Huang, San Francisco State Univ. (United States); C. Lou, J. Xu, Nankai Univ. (China); Z. Chen, San Francisco State Univ. (United States) and Nankai Univ. (China)
- 7782 08 **Observing light in nature from an airplane window** [7782-08]
J. A. Shaw, Montana State Univ. (United States)
- 7782 09 **Vortices in generalized Stokes parameters** [7782-09]
R. K. Singh, D. N. Naik, H. Itou, Y. Miyamoto, M. Takeda, The Univ. of Electro-Communications (Japan)
- 7782 0A **Experimental investigation of critical points in optical coherence function** [7782-10]
W. Wang, Heriot-Watt Univ. (United Kingdom); V. Vasil'ev, M. Soskin, Institute of Physics (Ukraine); M. Takeda, The Univ. of Electro-Communications (Japan)

7782 OB **Dynamic quantitative phase images of pond life, insect wings, and in vitro cell cultures**
[7782-11]
K. Creath, Optinering (United States) and College of Optical Sciences, The Univ. of Arizona
(United States)

Conference Committee

Conference Chairs

Katherine Creath, Optineering (United States) and College of Optical Sciences, The University of Arizona (United States)
Joseph A. Shaw, Montana State University (United States)

Program Committee

Mitsuo Takeda, The University of Electro-Communications (Japan)
Jean-Pol Vigneron, Facultés Universitaires Notre-Dame de la Paix (Belgium)
Wei Wang, Heriot-Watt University (United Kingdom)

Session Chairs

- 1 Learning from Nature
Katherine Creath, Optineering (United States) and College of Optical Sciences, The University of Arizona (United States)
- 2 Light in Art
Katherine Creath, Optineering (United States) and College of Optical Sciences, The University of Arizona (United States)
- 3 Light in Physical Systems
Joseph A. Shaw, Montana State University (United States)

Introduction

In the natural world there are many fascinating and beautiful effects involving optics. Most of the time we take these effects for granted. Each day optical scientists and engineers discover more about the natural world when we see how new technologies such as photonic crystals mimic the natural world. Photonic crystal-like structures in peacock feathers give the plumes their color. Similar structures in butterfly wing scales provide their iridescent colors.

Beyond these structures there are effects in the natural world such as the aurora borealis or things as everyday as rainbows and oil slicks. Scattering and color effects brighten up our world, while polarization adds a dimension that sometimes becomes visible to the human eye. When we look more closely we notice that plants glow and self-bioluminescence provides information about the state of health of organisms. We may even wonder why it is that parrots have a visual response much further into the ultraviolet than we do.

As optical scientists and engineers, most of us became fascinated with light at some point in our lives. We observe things in our everyday life that we don't often explore or think about, yet there are researchers who spend their careers looking at these effects in nature. All of us can learn to appreciate the natural optical world better by simply becoming more aware of what to see and how to see it.

This conference is the sixth in a series of conferences on *The Nature of Light* that started in 2005 with *The Nature of Light: What is a Photon?* (SPIE vol. 5866, 2005). Other volumes in the series related to Light in Nature include *The Nature of Light: Light in Nature* (SPIE vol. 6285, 2006), *The Nature of Light: What Are Photons? (II)* (SPIE vol. 6664, 2007), *The Nature of Light: Light in Nature II* (SPIE vol. 7057, 2008), and *The Nature of Light: What are Photons? III* (SPIE vol. 7421, 2009).

This year's conference *The Nature of Light: Light in Nature III* was comprised of eleven presentations with authors from seven different countries providing a variety of research involving light in the natural world. Nine of these presentations are represented with a manuscript in these proceedings. The papers have been split into three sessions. Session One focuses on *Learning from Nature*, while Session Two focuses on *Light in Art*, and Session Three focuses on *Light in Physical Systems*. Each of these papers offers its own perspective and provides some insight into the nature of light.

We enjoy having the opportunity to investigate these questions in a forum uniting optical scientists and engineers from all over the world. Thank you for joining us in our exploration of the question “what is light?”
