Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Introduction

The fifth edition of the International Conference on Advanced Topics in Optoelectronics, Microelectronics, and Nanotechnologies (ATOM-N 2010), was hosted in Constanta, one of the most important academic, cultural, and industrial centres in Romania, and located in the historical region of Dobrogea. The present conference marks 10 years of ATOM-N's existence, during which time it has consistently gathered the youthful spirit, as well as the experience of the most appreciated scientists in the field of micro, nanotechnology, and optoelectronics, topics that have great scientific applications worldwide.

ATOM-N 2010 took place 26–29 August 2010, and was organized into six main sessions: Plenary Session; Advanced Materials and New Technologies; Diffractive, Micro-Optics, and Optical Signal Processing; Nanoscience/Nanoengineering and Nanotechnologies; Instruments, Sensors, and Microsystems; and the Student Session. This was the first time in the conference's history that a student session was included.

A scientific workshop (project ELAN/POSDRU) took place free of charge for all of the participants on 28 August. The goal of the workshop was to identify and promote research topics in the field of microelectronic technology.

We received over 116 abstracts from all over Europe and USA. Due to the efforts of the scientific and program committee, 102 papers by authors from 10 countries were selected for presentation: 6 invited lectures, 38 oral lectures, and 58 poster papers.

We would like to express our thanks to the organizing committee for their enthusiastic and efficient work, and we extend our warmest thanks to all of the authors who presented their scientific contributions. We hope that all of the participants of this prestigious meeting had both an interesting professional experience as well as moments of relaxation, while discovering the multicultural aspects of the academic city of Constanta.
