Volume 7932

Proceedings of SPIE, 0277-786X, v. 7932

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/11/\$18.00.

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Contents

- vii Conference Committee
- ix Introduction
- xi *Lateral spread of MEMS WDM technologies (Plenary Paper) [7930-202]*
H. Toshiyoshi, The Univ. of Tokyo (Japan)
- xxiii *Toy Story: what I have learned from playing with toys about the physics of living cells (Plenary Paper) [7929-203]*
R. H. Austin, Princeton Univ. (United States)

SESSION 1 MEDICAL APPLICATIONS USING HYPERSPECTRAL IMAGING

- 7932 02 **Assessment of renal oxygenation during partial nephrectomy using DLP hyperspectral imaging (Invited Paper) [7932-01]**
S. L. Best, A. Thapa, M. S. Holzer, N. Jackson, S. A. Mir, C. J. Donnelly, The Univ. of Texas Southwestern Medical Ctr. at Dallas (United States); E. Wehner, The Univ. of Texas at Arlington (United States); G. V. Raj, E. Livingston, J. A. Cadetdu, The Univ. of Texas Southwestern Medical Ctr. at Dallas (United States); K. J. Zuzak, The Univ. of Texas at Arlington (United States) and Digital Light Innovations (United States)
- 7932 03 **Visible to NIR DLP hyperspectral imaging system for surgical utility using inherent chromophores and fluorescent probes [7932-02]**
M. L. Mangum, The Univ. of Texas at Arlington (United States); M. Saint-Cyr, The Univ. of Texas Southwestern Medical Ctr. at Dallas (United States); E. F. Wehner, A. Thapa, The Univ. of Texas at Arlington (United States); E. Livingston, The Univ. of Texas Southwestern Medical Ctr. at Dallas (United States); K. J. Zuzak, The Univ. of Texas at Arlington (United States) and Digital Light Innovations (United States)
- 7932 04 **NIR DLP hyperspectral imaging system for medical applications [7932-03]**
E. Wehner, The Univ. of Texas at Arlington (United States); A. Thapa, E. Livingston, The Univ. of Texas Southwestern Medical Ctr. at Dallas (United States); K. Zuzak, The Univ. of Texas at Arlington (United States) and Digital Light Innovations (United States)
- 7932 05 **An examination of spectral diversity of medical scenes for hyperspectral projection [7932-04]**
D. W. Allen, J. P. Rice, National Institute of Standards and Technology (United States); E. Wehner, R. McMahon, The Univ. of Texas at Arlington (United States); E. Livingston, J. White, R. Ufret-Vincenty, The Univ. of Texas Southwestern Medical Ctr. at Dallas (United States); K. J. Zuzak, The Univ. of Texas at Arlington (United States), The Univ. of Texas Southwestern Medical Ctr. at Dallas (United States), and Digital Light Innovations (United States)

- 7932 06 **Hyperspectral retinal imaging with a spectrally tunable light source (Invited Paper)** [7932-05]
R. P. Francis, Raytheon ELCAN Optical Technologies (United States); K. J. Zuzak, The Univ. of Texas at Arlington (United States) and Digital Light Innovations (United States);
R. Ufret-Vincenty, The Univ. of Texas Southwestern Medical Ctr. at Dallas (United States)

SESSION 2 DIRECT IMAGING AND BEAM PROJECTION

- 7932 07 **High speed maskless lithography of printed circuit boards using digital micromirrors (Invited Paper)** [7932-06]
E. J. Hansotte, E. C. Carignan, W. D. Meisburger, Maskless Lithography, Inc. (United States)
- 7932 08 **High-precision beam shaper for coherent and incoherent light using a DLP spatial light modulator** [7932-07]
J. Liang, R. N. Kohn, Jr., M. F. Becker, D. J. Heinzen, The Univ. of Texas at Austin (United States)
- 7932 09 **A new emissive projection display technology and a high contrast DLP projection display on black screen** [7932-08]
T. X. Sun, B. Cheng, Sun Innovations Inc. (United States)
- 7932 0A **Successful evaluation for space applications of the 2048x1080 DMD** [7932-09]
F. Zamkotsian, P. Lanzoni, E. Grassi, R. Barette, C. Fabron, Lab. d'Astrophysique de Marseille, CNRS (France); K. Tangen, Visitech AS (Norway); L. Valenziano, INAF/IASF Bologna (Italy); L. Marchand, L. Duvel, European Space Agency (Netherlands)

SESSION 3 3D MEASUREMENT SYSTEMS USING STRUCTURED LIGHT

- 7932 0B **DLP-based structured light 3D imaging technologies and applications (Invited Paper)** [7932-10]
J. Geng, IEEE Intelligent Transportation Systems Society (United States)
- 7932 0C **Non-contact 3D fingerprint scanner using structured light illumination (Invited Paper)** [7932-11]
M. Troy, Flashscan3D LLC (United States); L. Hassebrook, Univ. of Kentucky (United States); V. Yalla, R. Daley, Flashscan3D LLC (United States)
- 7932 0D **DLP/DSP-based optical 3D sensors for the mass market in industrial metrology and life sciences** [7932-12]
G. Frankowski, R. Hainich, GFMesstechnik GmbH (Germany)
- 7932 0E **3D metrology system using an active triangulation with high dynamic range** [7932-13]
D. Härter, C. Müller, H. Reinecke, Univ. of Freiburg (Germany)
- 7932 0F **3D triangulation system based on out-of-axis aperture configuration for micro-scaled objects shape measurement** [7932-14]
E. Dupont, F. Lamarque, C. Prella, Lab. Roberval, CNRS, Univ. de Technologie Compiègne (France); T. Redarce, Lab. Ampère, CNRS, Institut National des Sciences Appliquées (France)

SESSION 4 MULTI-SPECTRAL METROLOGY AND MICROSCOPY

- 7932 0G **Generation-3 programmable array microscope (PAM) with digital micro-mirror device (DMD)** [7932-15]
P. A. A. De Beule, Max Planck Institute for Biophysical Chemistry (Germany) and International Iberian Nanotechnology Lab. (Portugal); A. H. B. de Vries, D. J. Arndt-Jovin, T. M. Jovin, Max Planck Institute for Biophysical Chemistry (Germany)
- 7932 0H **Two-photon time-resolved confocal microscopy using a digital micromirror device** [7932-16]
M. Schellenberg, E. Peev, M. Kloster, J. Napier, W. Neu, Univ. of Applied Sciences Emden/Leer (Germany)
- 7932 0I **Development of a DMD-based compressive sampling hyperspectral imaging (CS-HSI) system** [7932-17]
Y. Wu, I. O. Mirza, Univ. of Delaware (United States); P. Ye, Univ. of Maryland, College Park (United States); G. R. Arce, D. W. Prather, Univ. of Delaware (United States)
- 7932 0J **Spectral transmittance and reflectance measurements utilizing a DLP based spectral source** [7932-18]
A. Y. Fong, Gooch and Housego (United States)

Patrick I. Oden, Texas Instruments Inc. (United States)

Introduction

We are once again pleased to have chaired a MOEMS/MEMS conference at SPIE Photonics West. For the third year, our conference was an exciting forum for presenting and networking with colleagues in this internationally recognized symposium.

The Digital Micromirror Device (DMD) was conceived at Texas Instruments in 1987, following a decade of work on analog deformable-mirror and cantilever-mirror devices. This particular MOEMS device has been applied most famously to conference room and portable projectors, large-screen high-definition televisions, and digital cinema projection systems, all of which were enabled by DLP® technology.

As evidenced in this well-attended conference at Photonics West 2011, the DMD and associated development platforms are enabling many exciting new systems and applications beyond the traditional display technologies. The goal of this conference was to bring together scientists, technologists, and developers working on applications in these emerging markets. In that regard, it was a rousing success. In these proceedings, you will find 18 very interesting papers covering a wide range of applications. We categorized them into four separate sessions:

Session 1 – Medical Applications Using Hyperspectral Imaging

Session 2 – Direct Imaging and Beam Projection

Session 3 – 3D Measurement Systems Using Structured Light

Session 4 – Multi-Spectral Metrology and Microscopy.

Our five invited authors are considered experts in their fields and we are honored that they participated in our conference. They and the other authors shared their progress on developing new applications using a DMD to process light. Many of the developers are now using DLP® Discovery kits which include a DMD along with supporting components.

We want to thank our program committee for the great work they did developing the conference concept, finding all these wonderful speakers, and organizing the papers into a cohesive structure. Special thanks go to the session chairs for working with their authors, coordinating the conference, and keeping it on schedule. And of course extra special thanks to the authors who did a fantastic job presenting their subjects in an interesting and passionate way. You made the conference a success.

We also want to thank Dr. Thomas Suleski and Dr. Harald Schenk (symposium chair and cochair) for their support and guidance. And of course thanks to the SPIE staff for keeping us on task.

If you were able to attend the conference, we know you enjoyed it and are looking forward to reading more about these interesting DMD applications. For those who did not attend, we hope you enjoy reading the papers as well. Keep those innovations coming; who knows what might be around the next corner.

Michael R. Douglass
