Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Introduction

Conference on Laser-Assisted Micro- and Nanotechnologies

This portion of the LAT 2010 conference proceedings presents selected papers which cover various topics of fundamentals and applications of laser-materials interaction: laser assisted synthesis of micro- and nanoparticles; high precision surface modification, structuring, shaping and roughness control; laser thin film deposition and processing; surface micro- and nanostructuring; laser stimulated surface thermo- and photochemical phenomena; modification of bulk transparent materials; treatment of materials with ultrashort laser pulses; in-situ laser processing diagnostics and control; mechanisms of laser ablation and pulsed laser deposition; mechanisms and applications of near-field optics.
