Volume 8052

Proceedings of SPIE, 0277-786X, v. 8052

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Author(s), "Title of Paper," in *Acquisition, Tracking, Pointing, and Laser Systems Technologies XXV*, edited by William E. Thompson, Paul F. McManamon, Proceedings of SPIE Vol. 8052 (SPIE, Bellingham, WA, 2011) Article CID Number.

Copying of material in this book for internal or personal use, or for the internal or personal use of specific clients, beyond the fair use provisions granted by the U.S. Copyright Law is authorized by SPIE subject to payment of copying fees. The Transactional Reporting Service base fee for this volume is \$18.00 per article (or portion thereof), which should be paid directly to the Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923. Payment may also be made electronically through CCC Online at copyright.com. Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/11/\$18.00.

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Contents

v	Conference Committee
vii	Introduction

SESSION 1 REQUIREMENTS AND SYSTEM-LEVEL APPLICATIONS

8052 02	Requirements on active (laser) tracking and imaging from a technology perspective (Invited Paper) [8052-01] J. Riker, Air Force Research Lab. (United States)
8052 05	Conformal apertures: concepts and requirements (Invited Paper) [8052-04] E. A. Watson, Air Force Research Lab. (United States)
8052 06	Influence of aero-optical disturbances on acquisition, tracking, and pointing performance characteristics in laser systems (Invited Paper) [8052-05] M. R. Whiteley, D. J. Goorskey, MZA Associates Corp. (United States)
8052 07	Multi-aperture coherent imaging (Invited Paper) [8052-06] N. J. Miller, J. W. Haus, P. F. McManamon, D. Shemano, Univ. of Dayton (United States)

SESSION 2 IMAGE AND SIGNAL PROCESSING FOR TARGET TRACKING APPLICATIONS

8052 0C	Performance analysis framework for embedded video-tracking systems [8052-12] D. Scott, GE Intelligent Platforms (United Kingdom)
8052 0D	Passive ranging of dynamic rocket plumes using infrared and visible oxygen attenuation [8052-13] R. A. Vincent, M. R. Hawks, Air Force Institute of Technology (United States)
8052 0E	Quantitative analysis of the improvement in high zoom maritime tracking due to real-time image enhancement [8052-14] A. K. Bachoo, J. P. de Villiers, Council for Scientific and Industrial Research (South Africa) and Univ. of Cape Town (South Africa); F. Nicolls, Univ. of Cape Town (South Africa); F. P. J. le Roux, Council for Scientific and Industrial Research (South Africa)
8052 0F	Quantitative analysis of the improvement in omnidirectional maritime surveillance and tracking due to real-time image enhancement [8052-15] J. P. de Villiers, A. K. Bachoo, Council for Scientific and Industrial Research (South Africa) and Univ. of Cape Town (South Africa); F. C. Nicolls, Univ. of Cape Town (South Africa); F. P. J. le Roux, Council for Scientific and Industrial Research (South Africa)

SESSION 3 CONTROL SYSTEMS AND COMPONENTS

- 8052 OH **A reduced-order disturbance observer applied to inertially stabilized line-of-sight control** [8052-17]
J. M. Hilkert, Alpha-Theta Technologies (United States); B. Pautler, The Raytheon Co. (United States)
- 8052 OJ **Dynamic performance of a two-axis gimbaled pedestal in keyhole gimbal-lock conditions** [8052-19]
J. DeBruin, IJK Controls LLC (United States)
- 8052 OK **Predicting and preventing reaction torque coupling in gimbal system mounts** [8052-20]
G. Ristroph, IJK Controls LLC (United States)
- 8052 OL **Linking the gyroscope to the imager's optical axis and the laser in finite element optomechanical models** [8052-21]
A. E. Hatheway, Alson E. Hatheway Inc. (United States)

SESSION 4 RAPID BEAM STEERING

- 8052 ON **MWIR wide-area step and stare imager (Invited Paper)** [8052-23]
H. Masterson, R. Serati, S. Serati, J. Buck, Boulder Nonlinear Systems (United States)
- 8052 OO **Optical characterization of MEMS micro-mirror arrays using digital holographic Shack-Hartmann wavefront sensor: a new technique** [8052-24]
I. Anisimov, S. B. Dooley, Air Force Research Lab. (United States)
- 8052 OP **Beam shape of coherently-combined optical arrays (Invited Paper)** [8052-25]
I. W. Smith, Raytheon Co. (United States)
- 8052 OQ **Embedded FPGA platform for fast steering mirror and optical inertial reference unit applications** [8052-26]
S. Wasson, F. Morgan, D. Eckelkamp-Baker, Applied Technology Associates (United States)
- 8052 OR **A high throughput liquid crystal light shutter for unpolarized light using polymer polarization gratings (Invited Paper)** [8052-27]
R. K. Komanduri, K. F. Lawler, M. J. Escuti, North Carolina State Univ. (United States)
- 8052 OT **Demonstration of large-angle nonmechanical laser beam steering based on LC polymer polarization gratings** [8052-29]
J. Kim, M. N. Miskiewicz, North Carolina State Univ. (United States); S. Serati, Boulder Nonlinear Systems (United States); M. J. Escuti, North Carolina State Univ. (United States)
- 8052 OV **High-precision scanner control system using online learning** [8052-31]
K. Aoki, Y. Yanagita, NEC Corp. (Japan); T. Kurii, NEC TOSHIBA Space Systems (Japan)

Conference Committee

Symposium Chair

William Jeffrey, HRL Laboratories, LLC (United States)

Symposium Cochair

Kevin P. Meiners, Office of the Secretary of Defense (United States)

Conference Chairs

William E. Thompson, New Mexico Institute of Mining and Technology
(United States)

Paul F. McManamon, Exciting Technology, LLC (United States)

Conference Cochair

Ali T. Alouani, Tennessee Technological University (United States)

Program Committee

William D. Blair, Georgia Tech Research Institute (United States)

David Blacknell, Defence Science and Technology Laboratory (United
Kingdom)

Gillian K. Groves, Raytheon Space & Airborne Systems (United States)

Dan C. Herrick, Air Force Research Laboratory (United States)

James M. Hilkert, Alpha-Theta Technologies (United States)

Paul S. Idell, The Boeing Company (United States)

Eric Kaltenbacher, SRI St. Petersburg (United States)

Christopher J. Musial, Boeing-SVS, Inc. (United States)

Kevin Probst, Core Group, Inc. (United States)

Jim F. Riker, Air Force Research Laboratory (United States)

Mike C. Roggemann, Michigan Technological University (United
States)

Juan R. Vasquez, Numerica Corporation (United States)

Matthew R. Whiteley, MZA Associates Corporation (United States)

Session Chairs

- 1 Requirements and System-Level Applications
Paul F. McManamon, Exciting Technology, LLC (United States)
Dan C. Herrick, Air Force Research Laboratory (United States)

- 2 Image and Signal Processing for Target Tracking Applications
Ali T. Alouani, Tennessee Technological University (United States)
- 3 Control Systems and Components
William E. Thompson, New Mexico Institute of Mining and Technology
(United States)
- 4 Rapid Beam Steering
Paul F. McManamon, Exciting Technology, LLC (United States)
Edward A. Watson, Air Force Research Laboratory (United States)

Introduction

The SPIE Acquisition, Tracking, Pointing, and Laser Systems Technologies conference continues a tradition of providing a venue for the presentation of new research and a well-documented annual assessment of on-going, practical acquisition, tracking, and pointing technology. Locating, identifying, locking onto, and maintaining track on dynamic targets is absolutely essential for precision photonic and optical systems to be able to achieve their performance goals. This year a rapid beam steering session was added, providing a look at both traditional and revolutionary beam steering methods. The conference has focused on both theory and practice, and has spanned all aspects of design, analysis, simulation, development, and testing. As a result, the last twenty-five years of Proceedings from this conference provide a comprehensive history of the major technical developments within this field. The conference also includes other optics and beam control technologies, such as adaptive optics and precision line-of-sight stabilization, which are needed for many implementations of laser-based acquisition, tracking, and pointing systems in the field.

The specific advancements included in the 2011 conference reported in these Proceedings include: requirements and systems level applications, image and signal processing for target tracking, control systems and components, and finally the new session, rapid beam steering.

The two and a half decade long-running success of this SPIE conference is clearly dependent on many authors and their sponsoring organizations who freely share their work with others. We extend a sincere appreciation to each of these contributors, as well as our fellow conference organizers who actively encourage their colleagues and professional associates to be a part of this event. We also recognize and appreciate the excellent SPIE staff that makes organizing these conferences such a pleasant experience.

Watch for the Call for Papers for the 2012 conference: Acquisition, Tracking, Pointing, and Laser Systems Technologies XXVI. We expect to continue the present scope of the conference with only minor changes.

William E. Thompson
Paul F. McManamon
