SPIE

Volume 8149

Proceedings of SPIE, 0277-786X, v. 8149

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Copying of material in this book for internal or personal use, or for the internal or personal use of specific clients, beyond the fair use provisions granted by the U.S. Copyright Law is authorized by SPIE subject to payment of copying fees. The Transactional Reporting Service base fee for this volume is \$18.00 per article (or portion thereof), which should be paid directly to the Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923. Payment may also be made electronically through CCC Online at copyright.com. Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/11/\$18.00.

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Contents

- vii *Conference Committee*
- ix *Introduction*
- xi *The little photometer that could: technical challenges and science results from the Kepler Mission (Plenary Paper) [8146-100]*
J. M. Jenkins, NASA Ames Research Ctr. (United States); J. Dunnuck, Ball Aerospace & Technologies Corp. (United States)

PLENARY SESSION

- 8149 02 **Large Binocular Telescope Adaptive Optics System: new achievements and perspectives in adaptive optics** (Plenary Paper) [8149-100]
S. Esposito, A. Riccardi, E. Pinna, A. Puglisi, F. Quirós-Pacheco, C. Arcidiacono, M. Xompero, R. Briguglio, G. Agapito, L. Busoni, L. Fini, J. Argomedo, A. Gherardi, INAF - Osservatorio Astrofisico di Arcetri (Italy); G. Brusa, D. Miller, J. C. Guerra, Large Binocular Telescope Observatory, The Univ. of Arizona (United States); P. Stefanini, P. Salinari, INAF - Osservatorio Astrofisico di Arcetri (Italy)

SESSION 1 SYSTEMS AND OPERATIONS

- 8149 03 **Integration and test of the Gemini Planet Imager** [8149-01]
S. J. Thomas, UCO, Lick Observatory (United States); L. Poyneer, Lawrence Livermore National Lab. (United States); R. De Rosa, Univ. of Exeter (United Kingdom); B. Macintosh, Lawrence Livermore National Lab. (United States); D. Dillon, UCO, Lick Observatory (United States); J. K. Wallace, Jet Propulsion Lab. (United States); D. Palmer, Lawrence Livermore National Lab. (United States); D. Gavel, UCO, Lick Observatory (United States); B. Bauman, Lawrence Livermore National Lab. (United States); L. Saddlemyer, Herzberg Institute of Astrophysics, National Research Council Canada (Canada); S. Goodsell, Gemini Observatory (United States)
- 8149 04 **TMTracer: a modeling tool for the TMT alignment and phasing system** [8149-03]
P. Piatrou, Univ. of California, Irvine (United States)
- 8149 05 **Athermal design of the optical tube assemblies for the ESO VLT Four Laser Guidestar Facility** [8149-04]
R. Henselmans, D. Nijkerk, M. Lemmen, N. Rijnveld, F. Kamphues, TNO (Netherlands)
- 8149 06 **Overview of the control strategies for the TMT alignment and phasing system** [8149-05]
P. Piatrou, G. Chanan, Univ. of California, Irvine (United States)

SESSION 2 WAVEFRONT SENSING

- 8149 07 **Latest GLAO results and advancements in laser tomography implementation at the 6.5m MMT telescope** [8149-07]
E. A. Bendek, M. Hart, The Univ. of Arizona, Steward Observatory (United States); K. B. Powell, MMT Observatory (United States); V. Vaitheeswaran, D. McCarthy, C. Kulesa, The Univ. of Arizona, Steward Observatory (United States)
- 8149 08 **Wavefront control with the Subaru Coronagraphic Extreme Adaptive Optics (SCEAO) system** [8149-08]
O. Guyon, Subaru Telescope, National Astronomical Observatory of Japan (United States) and Steward Observatory, The Univ. of Arizona (United States); F. Martinache, C. Clergeon, R. Russell, Subaru Telescope, National Astronomical Observatory of Japan (United States); T. Groff, Princeton Univ. (United States); V. Garrel, Subaru Telescope, National Astronomical Observatory of Japan (United States)
- 8149 09 **A non-linear curvature wavefront sensor reconstruction speed and the broadband design** [8149-09]
M. Mateen, College of Optical Sciences, The Univ. of Arizona (United States) and Air Force Research Lab. (United States); O. Guyon, Subaru Telescope, National Astronomical Observatory of Japan (United States) and Steward Observatory, The Univ. of Arizona (United States); J. Sasián, College of Optical Sciences, The Univ. of Arizona (United States); V. Garrel, Subaru Telescope, National Astronomical Observatory of Japan (United States); M. Hart, Steward Observatory, The Univ. of Arizona (United States)
- 8149 0A **Image plane phase-shifting wavefront sensor for giant telescope active and adaptive optics** [8149-10]
F. Hénault, CNRS H. Fizeau, Univ. de Nice Sophia Antipolis, Observatoire de la Côte d'Azur (France)

SESSION 3 WAVEFRONT CORRECTORS

- 8149 0B **Estimation of the GMT inter-segment piston error from deformable mirror commands** [8149-20]
M. Hart, Steward Observatory, The Univ. of Arizona (United States); R. Briguglio, E. Pinna, A. Puglisi, F. Quiros, M. Xompero, INAF - Osservatorio Astrofisico di Arcetri (Italy)
- 8149 0C **Demonstration of 17 cm robust carbon fiber deformable mirror for adaptive optics** [8149-12]
S. M. Ammons, Lawrence Livermore National Lab. (United States); M. Hart, Steward Observatory, The Univ. of Arizona (United States); B. Coughenour, College of Optical Sciences, The Univ. of Arizona (United States); R. Romeo, R. Martin, Composite Mirror Applications, Inc. (United States); M. Rademacher, Steward Observatory, The Univ. of Arizona (United States)
- 8149 0D **Bending modes for active optics** [8149-13]
B. Smith, X Double Dot (United States); B. Cuerden, Steward Observatory, The Univ. of Arizona (United States)

POSTER SESSION

- 8149 OE **Na variability and LGS elongation: impact on wavefront error** [8149-14]
K. J. Jones, WBAO (United States)
- 8149 OF **On numerical simulation of high-speed CCD/CMOS-based wavefront sensors in adaptive optics** [8149-15]
M. V. Konnik, J. S. Welsh, The Univ. of Newcastle (Australia)
- 8149 OG **Influence of photosensor noise on accuracy of cost-effective Shack-Hartmann wavefront sensors** [8149-16]
M. V. Konnik, J. S. Welsh, The Univ. of Newcastle (Australia)
- 8149 OH **Research on calibration method of LAMOST fiber robot** [8149-17]
Z. Liu, C. Zhai, H. Hu, J. Wang, J. Chu, Univ. of Science and Technology of China (China)
- 8149 OI **An automated aircraft detection system to prevent illumination from the laser guide star beacons at the MMT and LBT** [8149-18]
K. Newman, M. Hart, The Univ. of Arizona (United States)
- 8149 OJ **Status report on the Large Binocular Telescope's ARGOS ground-layer AO system** [8149-19]
M. Hart, Steward Observatory, The Univ. of Arizona (United States); S. Rabien, Max-Planck-Institut für extraterrestrische Physik (Germany); L. Busoni, INAF - Osservatorio Astrofisico di Arcetri (Italy); L. Barl, Max-Planck-Institut für extraterrestrische Physik (Germany); U. Beckmann, Max-Planck-Institut für Radioastronomie (Germany); M. Bonaglia, INAF - Osservatorio Astrofisico di Arcetri (Italy); Y. Boose, Max-Planck-Institut für extraterrestrische Physik (Germany); J. L. Borelli, T. Bluemchen, Max-Planck-Institut für Astronomie (Germany); L. Carbonaro, INAF - Osservatorio Astrofisico di Arcetri (Italy); C. Connot, Max-Planck-Institut für Radioastronomie (Germany); M. Deysenroth, R. Davies, Max-Planck-Institut für extraterrestrische Physik (Germany); O. Durney, Steward Observatory, The Univ. of Arizona (United States); M. Elberich, Max-Planck-Institut für Radioastronomie (Germany); T. Ertl, Max-Planck-Institut für extraterrestrische Physik (Germany); S. Esposito, INAF - Osservatorio Astrofisico di Arcetri (Italy); W. Gaessler, Max-Planck-Institut für Astronomie (Germany); V. Gasho, Steward Observatory, The Univ. of Arizona (United States); H. Gemperlein, Max-Planck-Institut für extraterrestrische Physik (Germany); P. Hubbard, Steward Observatory, The Univ. of Arizona (United States); S. Kanneganti, Max-Planck-Institut für extraterrestrische Physik (Germany); M. Kulas, Max-Planck-Institut für Astronomie (Germany); K. Newman, J. Noenickx, Steward Observatory, The Univ. of Arizona (United States); G. Orban de Xivry, Max-Planck-Institut für extraterrestrische Physik (Germany); D. Peter, Max-Planck-Institut für Astronomie (Germany); A. Quirrenbach, Landessternwarte Heidelberg (Germany); M. Rademacher, Steward Observatory, The Univ. of Arizona (United States); C. Schwab, Landessternwarte Heidelberg (Germany); J. Storm, Astrophysikalisches Institut Potsdam (Germany); V. Vaitheeswaran, Steward Observatory, The Univ. of Arizona (United States); G. Weigelt, Max-Planck-Institut für Radioastronomie (Germany); J. Ziegler, Max-Planck-Institut für extraterrestrische Physik (Germany)

Introduction

Adaptive optics (AO) for astronomical science is a mature technology. The availability of real-time image correction is now the rule rather than the exception on large general purpose telescopes. Scientific output, as measured by the fraction of journal articles that rely on AO, continues to rise, with scientific objectives that address not only quantitative improvements over previous studies, but challenges that *require* the use of AO. Adaptive optics turns the black hole at the center of the Galaxy into a laboratory in which to test the predictions of general relativity. We are learning about the initial mass function of sub-stellar objects, below the mass required for thermonuclear ignition, and extending toward the realm of planets. Increasingly, AO is assuming the role of a workaday tool in the astronomer's kit.

At the same time, the technology of AO is entering an era of specialization. We see a branching out of concepts that build on the basic foundation of wavefront measurement, reconstruction and correction, tailored to address an ever-broadening range of scientific questions. Techniques are being developed to engineer the corrected point spread function in order to deliver the highest contrast ratio for direct detection and characterization of planets around other stars. Image sharpening, over wider fields of view with ground-layer AO, is emerging as a way to compile statistically useful samples of the internal dynamics of high redshift galaxies and to understand distinct populations of stars within our own. Multi-conjugate AO will soon begin to offer imaging at the diffraction limit of our 8 m telescopes over fields of view 2000 resolution elements across. And systems are now being designed and built for the coming generation of extremely large telescopes of 25 m diameter and more that will extend the frontiers of scientific investigation yet further.

This meeting on Astronomical Adaptive Optics Systems and Applications, although modestly sized, brought together papers on many of these topics. The overall importance of continued efforts to break new ground in AO technology was highlighted by the plenary presentation of Dr. Simone Esposito, who described very encouraging high performance results from the AO system running at the Large Binocular Telescope. We heard too from groups developing the tools and instrumentation to find extrasolar planets, and those working to overcome the practical challenges to achieving the promise of advanced AO methods on the large telescopes of today and tomorrow.

We would like to express our thanks to the program committee for their assistance in putting together a successful meeting with a broad view of the present state of

the art. We are particularly grateful to all the authors and presenters for their informative participation, and we look forward to seeing you all again at the next meeting.

Robert J. Tyson
