Volume 8154

Proceedings of SPIE, 0277-786X, v. 8154

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

The Transactional Reporting Service base fee for this volume is \$18.00 per article (or portion thereof), which should be paid directly to the Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923. Payment may also be made electronically through CCC Online at copyright.com. Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/11/\$18.00.

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Contents

vii	<i>Conference Committee</i>
ix	<i>Introduction</i>

PLENARY SESSION

8154 02	Exploring the solar system: the view of planetary surfaces with VIS/IR remote sensing methods (Plenary Paper) [8154-101] G. E. Arnold, Deutsches Zentrum für Luft- und Raumfahrt e.V. (Germany)
---------	---

REMOTE SENSING CONCEPTS AND EXPERIMENTS

8154 03	A field-widened spectrometer-interferometer: back from the past to measure ionospheric-thermospheric energetics (Invited Paper) [8154-01] S. J. Wellard, Space Dynamics Lab. (United States); C. J. Mertens, NASA Langley Research Ctr. (United States)
8154 04	Testing of highly accurate blackbodies [8154-02] H. Latvakoski, M. Watson, S. Topham, Utah State Univ. (United States)
8154 05	Advancements in understanding auroral ionosphere-thermosphere coupling from infrared remote sensing (Invited Paper) [8154-03] C. J. Mertens, NASA Langley Research Ctr. (United States); X. Xu, SSAI, Inc. (United States); S. J. Wellard, Utah State Univ. (United States)
8154 06	Spaceborne laser development for future remote sensing applications (Invited Paper) [8154-04] M. A. Stephen, A. W. Yu, M. A. Krainak, J. B. Abshire, D. J. Harding, H. Riris, S. X. Li, J. Chen, K. Numata, S. Wu, J. Camp, NASA Goddard Space Flight Ctr. (United States)
8154 07	Latest developments for low-power infrared laser-based trace gas sensors for sensor networks (Invited Paper) [8154-05] S. So, Sentinel Photonics (United States) and Princeton Univ. (United States); D. Thomazy, Sentinel Photonics (United States); W. Wang, Princeton Univ. (United States); O. Marchat, Princeton Univ. (United States) and ETH Zurich (Switzerland); G. Wysocki, Princeton Univ. (United States)
8154 08	Temperature sensor for scanning thermal microscopy based on photoluminescence of microcrystal (Invited Paper) [8154-06] A. Sayoud, Univ. de Reims Champagne-Ardenne (France) and Univ. Badji Mokhtar (Algeria); N. Trannoy, J.-P. Jouart, P. Grossel, Univ. de Reims Champagne-Ardenne (France); M. Diaf, Univ. Badji Mokhtar (Algeria); Th. Duvaut, Univ. de Reims Champagne-Ardenne (France)

REMOTE SENSING AND CALIBRATION I

- 8154 0B **Precision spectroscopy with frequency combs at 3.4 μm (Invited Paper)** [8154-09]
E. Baumann, F. R. Giorgetta, W. C. Swann, A. M. Zolot, I. Coddington, N. R. Newbury, National Institute of Standards and Technology (United States)

REMOTE SENSING AND CALIBRATION II

- 8154 0D **The calibration of the multi-spectral imager on-board the EarthCARE spacecraft** [8154-11]
A. Pérez Albiñana, R. Gelsthorpe, A. Lefebvre, European Space Agency (Netherlands);
M. Sauer, K.-W. Kruse, R. Münzenmayer, EADS Astrium GmbH (Germany); G. Baister,
M. Chang, Surrey Satellite Technology Ltd. (United Kingdom)
- 8154 0E **Development of tunable polarimetric optical scattering instrument from 4.3-9.7 microns**
[8154-12]
J. C. Vap, S. E. Nauyoks, T. Fitzgerald, M. A. Marciniak, Air Force Institute of Technology
(United States)

FOCAL PLANE AND DETECTOR DEVELOPMENT FROM 1 MICRON TO LWIR

- 8154 0G **Near-infrared semiconductor-nanostructured light detectors (Invited Paper)** [8154-14]
S. Höfling, S. Göpfert, F. Hartmann, C. Schneider, D. Bisping, Julius-Maximilians-Univ.
Würzburg (Germany); D. Press, Stanford Univ. (United States); M. Kamp, L. Worschech,
A. Forchel, Julius-Maximilians-Univ. Würzburg (Germany)
- 8154 0H **Self-recovered InGaAs single photon avalanche detector with patterned Zn-diffused
structure** [8154-15]
J. Cheng, Y.-H. Lo, Univ. of California, San Diego (United States)
- 8154 0I **High performance type II superlattice photo diodes for long wavelength infrared
applications** [8154-16]
Y. Chen, A. Moy, K. Mi, P. Chow, SVT Associates, Inc. (United States)
- 8154 0J **The role of InAs thickness on the material properties of InAs/GaSb superlattices** [8154-17]
H. J. Haugan, G. J. Brown, F. Szmulowicz, Air Force Research Lab. (United States); S. Elhamri,
Univ. of Dayton (United States); B. V. Olson, T. F. Boggess, The Univ. of Iowa (United States);
L. Grazulis, Air Force Research Lab. (United States)
- 8154 0K **Growth and characteristics of type-II InAs/GaSb superlattice-based detectors** [8154-18]
A. Khoshakhlagh, D. Z. Ting, A. Soibel, L. Höglund, J. Nguyen, S. A. Keo, A. Liao,
S. D. Gunapala, Jet Propulsion Lab. (United States)
- 8154 0L **Type II superlattice barrier infrared detector (Invited Paper)** [8154-19]
D. Z. Ting, A. Soibel, J. Nguyen, L. Höglund, A. Khoshakhlagh, S. B. Rafol, S. A. Keo, A. Liao,
J. M. Mumolo, J. K. Liu, S. D. Gunapala, Jet Propulsion Lab. (United States)

INFRARED SPACEBORNE MISSIONS

- 8154 ON **The evolution of the performance of the AVHRR, HIRS and AMSU-A instruments on board MetOp-A after over four years in orbit (Invited Paper)** [8154-22]
D. Battles, Raytheon Technical Services Co. (Germany); R. Lambeck, NASA (United States); A. Pérez Albiñana, European Space Research and Technology Ctr. (Netherlands); M. K. Rama Varma Raja, I. M. Systems Group, Inc. (United States); X. Wu, C. Cao, NOAA/NESDIS (United States); H. Bauch, Vega Space GmbH (Germany); F. Montagner, EUMETSAT (Germany)
- 8154 OP **Contributions to climate research using the AIRS Science Team version-5 products** [8154-24]
J. Susskind, NASA Goddard Space Flight Ctr. (United States); G. Molnar, Morgan State University/GESTAR (United States); L. Iredell, Science Systems and Applications Corp. (United States)

FOCAL PLANE DEVELOPMENT AT RAYTHEON

- 8154 OQ **Digital scanner infrared focal plane technology** [8154-25]
M. A. Ortiz, N. R. Malone, M. Harris, J. Shin, S. Byers, D. Price, J. Vampola, Raytheon Vision Systems (United States)
- 8154 OR **Evolution of large format impurity band conductor focal plane arrays for astronomy applications** [8154-26]
R. Mills, E. Beuville, E. Corrales, Raytheon Vision Systems (United States); A. Hoffman, Acumen Scientific (United States); G. Finger, D. Ives, European Southern Observatory (Germany)
- 8154 OS **Large format high operability low cost infrared focal plane array performance and capabilities** [8154-27]
D. Lindsay, J. W. Bangs, J. Vampola, F. Jaworski, L. Mears, R. Wyles, J. Asbrock, E. Norton, M. Reddy, K. Rybnicek, A. Levy, N. Malone, Raytheon Vision Systems (United States)
- 8154 OT **Staring MWIR, LWIR and 2-color and scanning LWIR polarimetry technology** [8154-28]
N. R. Malone, A. Kennedy, R. Graham, Y. Thai, J. Stark, J. Sienicki, E. Fest, Raytheon Vision Systems (United States)

SPECTROSCOPY IN SOLAR SYSTEM EXPLORATION

- 8154 OW **Venus atmospheric and surface studies from VIRTIS on Venus Express (Invited Paper)** [8154-31]
G. E. Arnold, Deutsches Zentrum für Luft- und Raumfahrt e.V. (Germany); P. Drossart, Lab. d'Études Spatiales et d'Instrumentation en Astrophysique, CNRS, Observatoire de Paris (France); G. Piccioni, Istituto di Astrofisica Spaziale e Fisica Cosmica (Italy); R. Haus, Westfälische Wilhelms-Univ. Münster (Germany)
- 8154 OX **A new perspective on Mercury's surface composition and temperatures: Mercury Radiometer and Thermal Infrared Spectrometer (MERTIS)** [8154-32]
G. E. Arnold, J. Helbert, Institute for Planetary Research (Germany); H. Hiesinger, Westfälische Wilhelms Univ. (Germany); G. Peter, Optical Information Systems (Germany)

- 8154 0Y **Deep space instrument design for thermal infrared imaging with MERTIS** [8154-33]
I. Walter, German Aerospace Ctr. (Germany); T. Zeh, Kayser-Threde GmbH (Germany); J. Helbert, German Aerospace Ctr. (Germany); H. Hiesinger, Westfälische Wilhelms-Univ. Münster (Germany); A. Gebhardt, Fraunhofer Institute for Applied Optics and Precision Engineering (Germany); H. Hirsch, Astro- und Feinwerktechnik Adlershof GmbH (Germany); J. Knollenberg, German Aerospace Ctr. (Germany); E. Kessler, Institute of Photonic Technology e.V. (Germany); M. Rataj, Space Research Ctr. (Poland); J. Habermeier, ECM GmbH (Germany); S. Kaiser, Kayser-Threde GmbH (Germany); G. Peter, German Aerospace Ctr. (Germany)
- 8154 11 **MERTIS: configuration of measurement sequences for a maximized image SNR** [8154-36]
T. Säuberlich, C. Paproth, Optical Information Systems (Germany)
- 8154 12 **MERTIS: identifiability of spectral mineralogical features in dependence of the signal to noise ratio** [8154-37]
C. Paproth, T. Säuberlich, Optical Information Systems (Germany)

POSTER SESSION

- 8154 14 **Optical current sensor by self-compensating the Faraday effect** [8154-39]
H. C. Beltran, J. L. Flores, Univ. de Guadalajara (Mexico); J. A. Ferrari, Instituto de Física (Uruguay); G. García-Torales, J. Cabrera, Univ. de Guadalajara (Mexico)
- 8154 15 **Vectorial shearing interferometer applied in the faint sources detection** [8154-40]
J. Sánchez Preciado, G. García-Torales, J. L. Flores, Univ. de Guadalajara (Mexico)
- 8154 16 **Design of an intelligent flight instrumentation unit using embedded RTOS** [8154-42]
R. Estrada-Marmolejo, G. García-Torales, H. H. Torres-Ortega, J. L. Flores, Univ. de Guadalajara (Mexico)
- 8154 17 **Characterization of narrow-band near-IR diodes arranged in array patterns** [8154-43]
A. Ortega, G. Paez, M. Strojnik, Ctr. de Investigaciones en Óptica, A.C. (Mexico)
- 8154 18 **MetOp/HIRS pre-launch characterization data reanalysis** [8154-44]
T. Chang, I.M. Systems Group (United States); C. Cao, NOAA/NESDIS/STAR (United States)
- 8154 19 **Precise uniform light source based on optically connected integrating spheres for optical instrument calibration** [8154-45]
L. Mikheenko, V. Borovytsky, National Technical Univ. of Ukraine (Ukraine)
- 8154 1A **Updated level-1 processing after two-years operation of TANSO-FTS** [8154-46]
H. Suto, A. Kuze, K. Shiomi, M. Nakajima, Japan Aerospace Exploration Agency (Japan)
- 8154 1B **Characterization and measurements collected from Infrared Grazing Angle Reflectometer** [8154-47]
M. R. Benson, M. A. Marciniak, Air Force Institute of Technology (United States); J. W. Burks, Air Force Research Lab. (United States)
- 8154 1C **Cost effective method to measure strain independent of temperature using a half etched fiber Bragg grating** [8154-48]
M. Kondiparthi, Indian Institute of Science (India)

Gerald T. Fraser, National Institute of Standards and Technology
(United States)

John C. Gille, National Center for Atmospheric Research (United
States)

Sarath D. Gunapala, Jet Propulsion Laboratory (United States)

Dietrich Lemke, Max-Planck-Institut für Astronomie (Germany)

Neil R. Malone, Raytheon Company (United States)

Stanley Wellard, Space Dynamics Laboratory (United States)

Jan L. Williams, e-Systems Management Consultants (United States)

Jürgen Wolf, NASA Ames Research Center (United States)

Session Chairs

- 1 Remote Sensing Concepts and Experiments
Stanley J. Wellard, Space Dynamics Laboratory (United States)
Marija Strojnik, Centro de Investigaciones en Óptica, A.C. (Mexico)
- 2 Remote Sensing and Calibration I
Marija Strojnik, Centro de Investigaciones en Óptica, A.C. (Mexico)
Gonzalo Paez, Centro de Investigaciones en Óptica, A.C. (Mexico)
- 3 Remote Sensing and Calibration II
Marija Strojnik, Centro de Investigaciones en Óptica, A.C. (Mexico)
Gonzalo Paez, Centro de Investigaciones en Óptica, A.C. (Mexico)

- 4 Focal Plane and Detector Development From 1 Micron to LWIR
Gail J. Brown, Air Force Research Laboratory (United States)
Gonzalo Paez, Centro de Investigaciones en Óptica, A.C. (Mexico)
- 5 Infrared Spaceborne Missions
Gonzalo Paez, Centro de Investigaciones en Óptica, A.C. (Mexico)
Neil R. Malone, Raytheon Company (United States)
- 6 Focal Plane Development at Raytheon
Neil R. Malone, Raytheon Company (United States)
Decosta Lindsay, Raytheon Company (United States)
- 7 Spectroscopy in Solar System Exploration
Gabriele E. Arnold, Deutsches Zentrum für Luft- und Raumfahrt e.V.
(Germany)
Gonzalo Paez, Centro de Investigaciones en Óptica, A.C. (Mexico)

Introduction

Once again, the conference on Infrared Remote Sensing and Instrumentation was held in San Diego, California, August 20 to 25, 2011, forming a part of the annual meeting of SPIE, a technical society dedicated to advancing science and engineering through the use of light. This was an especially important meeting for the chairs; with its completion we are approaching the twentieth in the series of these conferences. The next meeting, the twentieth, will be held again in San Diego during the third week of August 2012. San Diego has become established as our favorite place: international visitors from Europe like it for the famed southern California location, and the participants from far East are actually not very distant from it—just a short hop across the Pacific.

On behalf of the authors, participants, readers of the proceedings, and especially on own behalf of the chairs, I wish to express our profoundest appreciation to the chairs of the smoothly run sessions. Dr. Stanley J. Wellard from the Space Dynamics Laboratory put together an informative session on remote sensing concepts and experiments. Despite the session starting bright and early at eight o'clock, many interested participants came with numerous questions.

This was followed by a traditional session on remote sensing and calibration, composed of two parts, conducted by the conference chairs to allow some participants to take Sunday afternoon off with their family. Interestingly, this year we had no participation from the NIST, because the austerity measures in this institution severely restricted the travel budgets. We are happy for our friends at NIST that their management is looking out to preserve funds for employment; however, we are looking forward to their active return to our conference. There can be no calibration session without the wisdom that only the scientists from NIST may contribute effectively. Nevertheless, we had very productive calibration sessions.

No infrared remote sensing may be effective without incorporating modern infrared detectors. Session 4, Focal Plane and Detector Development from 1 Micron to LWIR, was managed effectively by Dr. Gail J. Brown from Air Force Research Laboratory. The second chair, Gonzalo Paez from the Optical Research Center in Mexico, chose to run Session 5 on Infrared Spaceborne Missions.

The sixth session was dedicated to the focal plane development at Raytheon, generating a large number of very interesting questions. Both the session organization and the challenge of dealing with some very difficult questions fell on Mr. Neil R. Malone of Raytheon Company.

The highlight of the conference was Session 7 on the spectroscopy in solar system exploration. Prof. Gabriele Arnold, from the German Center for the Space research, chaired the session on solar system exploration from the European perspective. Dr. Arnold was also a plenary speaker for the remote sensing group of conferences.

Nearly fifty papers were presented in this conference, with the international scientific participation. A great majority of presenters submitted their work for inclusion in the proceedings for future reference. We wish to express our appreciation to the participants, both the authors and the active audience who makes the discussion so lively.

Special thanks are due to the SPIE staff for providing friendly guidance and organizational support to meet all the deadlines. Organizing a technical conference and publishing proceedings involves hard work of a team of dedicated and knowledgeable people whose unobtrusive advice and guidance makes a conference a success. We thank them for quiet assistance.
