Volume 8175

Proceedings of SPIE, 0277-786X, v. 8175

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Contents

- ix *Conference Committee*
- xi *Introduction*
- xiii *The evolution of airborne chemical and radiological remote sensing for emergency and natural disaster response (Plenary Summary)*
P. E. Lewis, National Geospatial-Intelligence Agency (United States)

SESSION 1 OCEAN COLOUR

- 8175 02 **Sea surface temperature and ocean colour (MODIS/AQUA) space and time variability in Indonesian Sea coral reef systems from 2002 to 2011 (Invited Paper)** [8175-01]
A. R. Polónia, Ctr. for Environmental and Marine Studies, Univ. de Aveiro (Portugal);
M. Figueiredo, Univ. dos Açores (Portugal); D. F. R. Cleary, Ctr. for Environmental and Marine
Studies, Univ. de Aveiro (Portugal); N. J. de Voogd, National Museum of Natural History
(Netherlands); A. Martins, Univ. dos Açores (Portugal)
- 8175 03 **Bathymetry mapping and sea floor classification using multispectral satellite data and standardized physics-based data processing** [8175-02]
S. Ohlendorf, A. Müller, T. Heege, EOMAP GmbH & Co. KG (Germany); S. Cerdeira-Estrada,
CONABIO (Mexico); H. T. Kobryn, Murdoch Univ. (Australia)
- 8175 04 **Development of a remote sensing algorithm for cyanobacterial phycocyanin pigment in the Baltic Sea using neural network approach** [8175-04]
S. Riha, H. Krawczyk, German Aerospace Ctr. (Germany)
- 8175 05 **Uncertainties assessment and satellite validation over 2 years time series of multispectral and hyperspectral measurements in coastal waters at Long Island Sound Coastal Observatory** [8175-05]
S. A. Ahmed, T. Harmel, A. Gilerson, A. Tonizzo, S. Hlaing, The City College of the City Univ. of
New York (United States); A. Weidemann, R. A. Arnone, U.S. Naval Research Lab. (United
States)

SESSION 2 SURFACE AND IN-SITU WATER PROPERTIES

- 8175 06 **Estimating uncertainties in bio-optical products derived from satellite ocean color imagery using an ensemble approach** [8175-07]
R. W. Gould, Jr., S. C. McCarthy, I. Shulman, U.S. Naval Research Lab. (United States);
E. Coelho, Univ. of Southern Mississippi (United States); J. Richman, U.S. Naval Research Lab.
(United States)
- 8175 07 **Estimating errors in satellite retrievals of bio-optical properties due to incorrect aerosol model selection (Invited Paper)** [8175-06]
S. C. McCarthy, R. W. Gould, Jr., J. Richman, C. Kearney, A. Lawson, U.S. Naval Research
Lab. (United States)

- 8175 08 **Some insights of spectral optimization in ocean color inversion** [8175-08]
Z. Lee, Univ. of Massachusetts at Boston (United States); B. Franz, NASA Goddard Space Flight Ctr. (United States); S. Shang, Xiamen Univ. (China); Q. Dong, Mississippi State Univ. (United States); R. Arnone, U.S. Naval Research Lab. (United States)
- 8175 09 **Measuring underwater polarization field from above-water hyperspectral instrumentation for water composition retrieval** [8175-09]
T. Harmel, A. Tonizzo, A. Ibrahim, A. Gilerson, The City College of New York (United States); J. Chowdhary, Columbia Univ. (United States); S. Ahmed, The City College of New York (United States)

SESSION 3 OIL AND AIRBORNE REMOTE SENSING I

- 8175 0A **Remote sensing as input and validation tool for oil spill drift modeling** [8175-10]
B. Baschek, Bundesanstalt für Gewässerkunde (Germany); S. Dick, F. Janssen, Bundesamt für Seeschifffahrt und Hydrographie (Germany); C. Kübert, Bundesanstalt für Gewässerkunde (Germany); S. Maßmann, Bundesamt für Seeschifffahrt und Hydrographie (Germany); M. Pape, M. Roers, Bundesanstalt für Gewässerkunde (Germany)
- 8175 0B **Airborne imaging sensors for environmental monitoring & surveillance in support of oil spills & recovery efforts** [8175-11]
C. R. Bostater, J. Jones, H. Frystacky, Florida Institute of Technology (United States); G. Coppin, F. Leavaux, Florida Institute of Technology (United States) and Royal Belgian Military Academy (Belgium); X. Neyt, Royal Belgian Military Academy (Belgium)
- 8175 0C **SETHI and SYSIPHE: the two new-generation airborne remote sensing systems** [8175-12]
J.-P. Bruyant, P. Dreuillet, P. Chervet, L. Rousset-Rouvière, ONERA (France)
- 8175 0D **Short gravity-capillary waves modulation due to long surface and internal wave: laboratory and field experiment** [8175-13]
I. A. Sergievskaya, S. A. Ermakov, Institute of Applied Physics (Russian Federation)

SESSION 4 OIL AND AIRBORNE REMOTE SENSING II

- 8175 0F **Potential impacts of the Deepwater Horizon oil spill on large pelagic fishes (Invited Paper)** [8175-15]
S. Frias-Torres, Ocean Research & Conservation Association (United States); C. R. Bostater, Jr., Florida Institute of Technology (United States)
- 8175 0G **High spectral resolution imager for solar induced fluorescence observation** [8175-16]
A. Barducci, D. Guzzi, C. Lastri, P. Marcoionni, V. Nardino, I. Pippi, V. Raimondi, P. Sandri, Istituto di Fisica Applicata Nello Carrara (Italy)

SESSION 5 OCEAN AND COASTAL SENSING I

- 8175 0J **A first attempt at testing correlation between MODIS ocean colour data and *in situ* chlorophyll-a measurements within Maltese coastal waters** [8175-21]
A. Deidun, A. Drago, A. Gauci, A. Galea, J. Azzopardi, Univ. of Malta (Malta); F. Mélin, European Commission Joint Research Ctr. (Italy)

- 8175 OK **Estimation of the seasonal sea level variations in the Gulf of Cadiz (SW Iberian Peninsula) from in-situ measurements, satellite altimetry and numerical models** [8175-23]
I. Laiz, J. Gómez-Enrí, B. Tejedor, A. Aboitiz, P. Villares, Univ. de Cádiz (Spain)
- 8175 OL **Full-scale investigations of the action of internal waves and inhomogeneous currents on the wind waves in the White Sea** [8175-24]
V. V. Bakhanov, N. A. Bogatov, A. V. Ermoshkin, Institute of Applied Physics of RAS (Russian Federation); A. Yu. Ivanov, P.P. Shirshov Institute of Oceanology of RAS (Russian Federation); V. N. Lobanov, O. N. Kemarskaja, V. I. Titov, Institute of Applied Physics of RAS (Russian Federation)
- 8175 OM **Sea surface wind measurement over offshore wind farm using TerraSAR-X data** [8175-69]
X.-M. Li, S. Lehner, S. Brusch, Deutsches Zentrum für Luft- und Raumfahrt e.V. (Germany); Y.-Z. Ren, Ctr. for Earth Observation and Digital Earth (China)

SESSION 6 OCEAN AND COASTAL SENSING II

- 8175 OO **Bidirectional reflectance function in coastal waters: modeling and validation** [8175-25]
A. Gilerson, S. Hlaing, T. Harmel, A. Tonizzo, The City College of the City Univ. of New York (United States); R. Arnone, A. Weidemann, U.S. Naval Research Lab. (United States); S. Ahmed, The City College of the City Univ. of New York (United States)
- 8175 OP **Oceanic response around the Yucatan Peninsula to the 2005 hurricanes from remote sensing** [8175-26]
E. J. D'Sa, N. C. Tehrani, V. H. Rivera-Monroy, Louisiana State Univ. (United States)

SESSION 7 SENSOR CALIBRATION, RETRIEVALS, AND ERRORS

- 8175 OQ **Generalized satellite image processing: eight years of ocean colour data for any region on earth** [8175-28]
Q. Vanhellefont, K. Ruddick, Institut Royal des Sciences Naturelles de Belgique (Belgium)
- 8175 OR **Remote sensing and in situ observations of marine slicks associated with inhomogeneous coastal currents** [8175-29]
S. Ermakov, I. Kapustin, I. Sergievskaya, Institute of Applied Physics (Russian Federation)

SESSION 8 MICROWAVE, RADAR AND ALTIMETRY SENSING

- 8175 OU **Preparatory works for the altimeter calibration of the Sentinel-3 mission using the dedicated calibration site in Crete and Gavdos** [8175-31]
S. P. Mertikas, A. Daskalakis, E. Koutroulis, A. Tripolitsiotis, P. Partsinevelos, Technical Univ. of Crete (Greece)
- 8175 OW **Directional ocean wave spectrum estimation based on the joint measurement from synthetic aperture radar and wave spectrometer** [8175-33]
L. Ren, D. Pan, Z. Hao, Z. Mao, X. He, The Second Institute of Oceanography, SOA (China)

- 8175 0X **Multi-frequency and multi-polarization measurements of water surface radar cross section and brightness temperature angular dependences** [8175-34]
A. K. Arakelyan, A. K. Hambaryan, A. A. Arakelyan, M. L. Grigoryan, ECOSERV Remote Observation Ctr. Co. Ltd. (Armenia)

POSTER SESSION

- 8175 0Y **In-orbit radiometric performance variations of geostationary ocean color imager** [8175-03]
S.-J. Lee, Korea Ocean Research & Development Institute (Korea, Republic of); S. Cho, Korea Ocean Research & Development Institute (Korea, Republic of) and Yonsei Univ. (Korea, Republic of); H.-J. Han, E. Oh, J.-H. Ryu, Y.-H. Ahn, Korea Ocean Research & Development Institute (Korea, Republic of)
- 8175 10 **UAV remote sensing hazard assessment in Zhouqu debris flow disaster** [8175-20]
Q. Wen, H. He, National Disaster Reduction Ctr. of China (China); X. Wang, Cold and Arid Regions Environmental and Engineering Research Institute (China) and Graduate Univ. of Chinese Academy of Sciences (China); W. Wu, L. Wang, F. Xu, P. Wang, T. Tang, Y. Lei, National Disaster Reduction Ctr. of China (China)
- 8175 11 **Is the katabatic wind the forcing factor of Terra Nova Bay polynya events?** [8175-36]
F. Parmiggiani, Istituto di Scienze dell'Atmosfera e del Clima-CNR (Italy)
- 8175 12 **Analysis of submarine sand wave imaging by SAR in Taiwan shoal** [8175-37]
K. Fan, W. Huang, P. Chen, B. Fu, The Second Institute of Oceanography, SOA (China); X. Yu, Linyi Univ. (China); J. Chang, The Second Institute of Oceanography, SOA (China)
- 8175 13 **Automatic detection of ocean internal wave from SAR image** [8175-38]
K. Fan, W. Huang, P. Chen, The Second Institute of Oceanography, SOA (China); X. Yu, Linyi Univ. (China); B. Fu, J. Chang, The Second Institute of Oceanography, SOA (China); T. Pang, Fourth Exploration Institute of Geology and Mineral Resources (China)
- 8175 16 **Development of clarity model for Caspian Sea using MERIS data** [8175-43]
H. Taheri Shahraini, Tarbiat Modares Univ. (Iran, Islamic Republic of); H. Sharifi, Shahrood Univ. of Technology (Iran, Islamic Republic of); M. Sanaeifar, Islamic Azad Univ. (Iran, Islamic Republic of)
- 8175 17 **Ocean processes revealing by seasonal dynamics of surface chlorophyll concentration by satellite data** [8175-44]
A. Shevyrnogov, Institute of Biophysics (Russian Federation) and Siberian Federal Univ. (Russian Federation); G. Vysotskaya, Institute of Biophysics (Russian Federation) and Institute of Computational Modeling (Russian Federation)
- 8175 18 **Is it possible to add total SWH to the Globwave SAR dataset** [8175-45]
J. Yang, Q. Xiao, Y. Pan, G. Xu, H. Zhang, The Second Institute of Oceanography, SOA (China)
- 8175 19 **Phytoplankton bloom and sea surface cooling induced by Category 5 Typhoon Megi in the South China Sea: direct multi-satellite observations** [8175-47]
X. Chen, D. Pan, X. He, The Second Institute of Oceanography, SOA (China) and Zhejiang Univ. (China); Y. Bai, D. Wang, The Second Institute of Oceanography, SOA (China)

- 8175 1A **Relationship between the colored dissolved organic matter and dissolved organic carbon and the application on remote sensing in East China Sea** [8175-48]
L. Qiong, Wuhan Univ. (China) and The Second Institute of Oceanography, SOA (China); D. Pan, H. Huang, The Second Institute of Oceanography, SOA (China); J. Lu, Zhejiang Marine Surveil and Forecast Ctr. (China); Q. Zhu, The Second Institute of Oceanography, SOA (China)
- 8175 1B **Study on long-term characteristics of suspended sediments in Minjiang Estuary based on MODIS data** [8175-49]
X. Xu, The Third Institute of Oceanography, SOA (China) and The Second Institute of Oceanography, SOA (China) and South China Sea Institute of Oceanology (China) and The Graduate Univ. of Chinese Academy of Science (China); J. Chen, The Third Institute of Oceanography, SOA (China); D. Pan, Z. Mao, X. Chen, The Second Institute of Oceanography, SOA (China)
- 8175 1C **Optical absorption and scattering properties in the East China Sea** [8175-50]
X. Zhang, X. He, X. Chen, Z. Hao, H. Huang, Q. Zhu, The Second Institute of Oceanography, SOA (China)
- 8175 1D **Remote sensing of water basins using optical range - time images of water surface** [8175-51]
V. Titov, V. Bakhanov, E. Zuikova, A. Luchinin, Institute of Applied Physics (Russian Federation)
- 8175 1E **Research on upwelling region wind speed correction method for wind retrieval from SAR imagery along the Zhejiang Coast** [8175-53]
J. Chang, Ocean Univ. of China (China) and The Second Institute of Oceanography, SOA (China); W. Huang, X. Lou, K. Fan, A. Shi, The Second Institute of Oceanography, SOA (China)
- 8175 1F **HAB detection based on absorption and backscattering properties of phytoplankton** [8175-55]
H. Lei, Hangzhou Normal Univ. (China) and The Second Institute of Oceanography, SOA (China); D. Pan, Y. Bai, X. Chen, The Second Institute of Oceanography, SOA (China); Y. Zhou, Zhejiang Fishery Technical Extension Ctr. (China); Q. Zhu, The Second Institute of Oceanography, SOA (China)
- 8175 1G **The internal waves' distribution of whole South China Sea extracted from ENVISAT and ERS-2 SAR images** [8175-56]
J. Wang, Ocean Univ. of China (China) and Second Institute of Oceanography, SOA (China); W. Huang, J. Yang, H. Zhang, The Second Institute of Oceanography, SOA (China)
- 8175 1H **In-orbit image performance simulation for GOCI from integrated ray tracing computation** [8175-57]
E. Oh, Korea Ocean Research & Development Institute (Korea, Republic of); S.-W. Kim, Yonsei Univ. (Korea, Republic of); Y. Jeong, I&A Tech, Inc. (Korea, Republic of); S. Jeong, LG Innotek (Korea, Republic of); D. Ryu, Yonsei Univ. (Korea, Republic of); S. Cho, J.-H. Ryu, Y.-H. Ahn, Korea Ocean Research & Development Institute (Korea, Republic of)

- 8175 1I **An extracting process of the retrieval coefficients for three frequency channel microwave radiometer** [8175-59]
G. Zheng, J. Yang, X. Lou, G. Xu, Y. Pan, B. Gong, The Second Institute of Oceanography, SOA (China)
- 8175 1J **Sea ice remote sensing using AMSR-E data: surface roughness and refractive index** [8175-60]
I. Shin, J. Park, A. Suh, S. Hong, Korea Meteorological Administration (Korea, Republic of)
- 8175 1K **The use of MERIS fluorescence bands for red tides monitoring in the East China Sea** [8175-61]
B. Tao, Z. Mao, D. Wang, The Second Institute of Oceanography, SOA (China); J. Lu, Marine Monitoring and Forecasting Ctr. of Zhejiang Province (China); H. Huang, The Second Institute of Oceanography, SOA (China)
- 8175 1L **The impact of Asian dust events on the chlorophyll a in the Yellow Sea: a preliminary analysis based on remote sensing** [8175-62]

Introduction

The conference chairs and session chairs thank the participants and authors who attended the Remote Sensing of the Ocean & Sea Ice and Large Water Regions 2011 conference in Prague, Czech Republic. The Prague conference center was a superb venue for the conference that was well attended, particularly on the first day.

The selected authors and their reviewed papers for presentation at the conference and accepted for publication in this volume continue to make significant contributions to the open scientific literature in remote sensing and well as surface and subsurface sensing of the oceans, coastal waters and large water regions.

Several technical sub-committee members also presided over the sessions at the conference and we appreciate their time in assisting with the conduct of the conference. Of particular note are the excellent papers regarding *in-situ* ocean optics, water surface imaging and simulation, airborne sensing of oil spills and related mapping.

A kind thank you is given to the efforts of the staff at SPIE and the SPIE Proceedings Coordinator for following the proceedings throughout the publication process. The conference and resulting publication could not have been held without the SPIE staff assistance within the European and US offices. Thanks again for your patience and support in the coordination of the conference for all of the participants and authors of this volume.

Plenary Summary

The Evolution of Airborne Chemical and Radiological Remote Sensing For Emergency and Natural Disaster Response

Summary of the September 19, 2011 SPIE Remote Sensing Plenary Session Presentation by

Paul E. Lewis

National Geospatial-Intelligence Agency, United States of America

First responders, joint operations centers, and recovery and remediation personnel consider timely and affordable airborne chemical, radiological, imagery analysis, and related mapping products essential in the formulation of a complete understanding of an incident and its potential impact on adjacent communities, and for recovery and remediation. Airborne remote sensing provides the flexibility to produce incident specific products and conduct over-flights at the frequencies needed to provide timely and relevant information for recovery and remediation operations, optimization of resources during an event, and for the safety of emergency response personnel.

The utility of airborne chemical remote sensing became apparent to the EPA during a chemical plant explosion, which occurred in Sioux City, Iowa in December of 1994. The facility produced ammonium nitrate fertilizer, and also produced its own ammonia for use in the process. In late December an explosion occurred rupturing the main storage tank and spilling three million gallons of ammonia. This resulted in lethal vapor levels in and around the plant and created a plume of ammonia vapors estimated to be 35 miles long. Approximately 3,500 people were evacuated over a 50 square mile area. The EPA sent in vehicles with ground sampling crews dressed in Level A hazmat suits with 30 minute air packs to monitor the site. Due to heavy snow coverage on the ground and saturated soil conditions underneath the snow, all of the EPA vehicles became stuck. Ground sampling crews had to be rescued before air supplies ran out. Consequently, no monitoring of vapor levels was accomplished.

The lessons learned from responding to the chemical explosion in Sioux City, Iowa in 1994 prompted the EPA to begin evaluating the application of airborne remote sensing infrared and gamma ray spectroscopy for emergency responses involving chemical and radiological incidents. Concurrently, with the evaluation process to determine the performance and feasibility of implementing infrared and gamma ray spectroscopy in an airborne platform came the evolution of a set of core requirements for an airborne operational capability: Standoff chemical and gamma ray detection and identification with low false alarm rates; High resolution ortho-rectified day-night imagery; Airborne data collection under cloud ceilings; Rapid dispatch-wheels up in under one hour after activation; Automated data processing –real or near-real-time chemical data analysis; Direct integration of data and information to local incident commanders-local and federal joint operations centers; Data telemetry to and from the aircraft.

According to the EPA, in the United States there are approximately 123 facilities where a release of chemicals could threaten more than one million people. There are approximately 750 additional facilities where a chemical release could threaten more than a hundred thousand people.

In 2001, the EPA implemented the United States only civilian operational airborne chemical detection and identification capability called the Airborne Spectral Photometric Environmental Collection Technology (ASPECT) Program. Subsequently in 2003, the EPA and NGA agreed to collaborate in a cooperative research and development program focused on evolving the capabilities of the ASPECT Program to produce near-real-time state of the art chemical, radiological and imagery mapping emergency response products.

Plenary Summary

Airborne Spectral Photometric Environmental Collection Technology (ASPECT) Program
The United States Only Airborne
24/7 Operational CIVIL Emergency Response Chemical, Radiological, & Imaging Mapping Capability

The ASPECT model of operation combines an airborne operational remote sensing suite with a research and development support team to insure that analysis and products are validated and verified scientifically and are reviewed and checked before release. The research and development support team collaboration between the EPA and NGA to evolve the capabilities of the ASPECT Program has resulted in the following significant accomplishments: Near-real-time automated onboard chemical detection and identification of 78 chemical compounds with low false alarm rates; Near-real-time information on plume direction and concentrations; Automated software producing day/night ortho-rectified imagery rapid response maps; Automated software producing gamma ray survey information maps onboard the aircraft; Data and information telemetry to and from the aircraft facilitating turn-around times and seamless integration of vital situational awareness information from the aircraft to first responders or joint operation centers in 5 to 15 minutes.

Since 2001 the ASPECT Program has provided essential information during 115 emergency, disaster, and homeland security related incidents ranging from chemical plant explosions and train derailments to fires, floods, hurricanes, and special events. The ASPECT Program played key roles in providing essential information to first responders and joint operations centers in response to the following historical events: The Shuttle Columbia break up during re-entry over Texas in February of 2003; Hurricane Katrina in August of 2005; The Deepwater Horizon Oil Spill disaster in the Gulf of Mexico from April-August 2010.

Over the past decade in over 115 responses, the ASPECT program has demonstrated the utility of having timely, cost-effective operational airborne chemical and radiological remote sensing information integrated seamlessly into the local, state and federal emergency response and disaster recovery and remediation communities. What is needed next is the implementation of multiple aircraft strategically located throughout the United States so that ASPECT capabilities can be on the scene of a disaster or event in less than three hours.
