SPIE

Volume 8213

Proceedings of SPIE, 1605-7422, v. 8213

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Copying of material in this book for internal or personal use, or for the internal or personal use of specific clients, beyond the fair use provisions granted by the U.S. Copyright Law is authorized by SPIE subject to payment of copying fees. The Transactional Reporting Service base fee for this volume is \$18.00 per article (or portion thereof), which should be paid directly to the Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923. Payment may also be made electronically through CCC Online at copyright.com. Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 1605-7422/12/\$18.00.

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIE
Digital Library

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Contents

xiii	Conference Committee
xv	Introduction

SESSION 1 IMAGING VASCULAR STRUCTURE AND FLOW: OPHTHALMOLOGY

- 8213 04 **In vivo human retinal and choroidal vasculature visualization using differential phase contrast swept source optical coherence tomography at 1060 nm** [8213-03]
R. Motaghiannezam, S. Fraser, California Institute of Technology (United States)
- 8213 06 **Angiogram visualization and total velocity blood flow assessment based on intensity information analysis of OCT data** [8213-05]
D. Ruminski, D. Bukowska, I. Gorczynska, M. Szkulmowski, M. Wojtkowski, Nicolaus Copernicus Univ. (Poland)
- 8213 07 **Visualization of human retinal capillary networks: a comparison of intensity, speckle-variance and phase-variance optical coherence tomography** [8213-06]
D. Y. Kim, Univ. of California, Davis (United States); J. Fingler, California Institute of Technology (United States); J. S. Werner, Univ. of California, Davis (United States); D. M. Schwartz, Univ. of California, San Francisco (United States); S. E. Fraser, California Institute of Technology (United States); R. J. Zawadzki, Univ. of California, Davis (United States)

SESSION 2 NEW CLINICAL AND PRE-CLINICAL APPLICATIONS

- 8213 0B **Prenatal imaging of distal limb abnormalities using OCT in mice** [8213-10]
I. V. Larina, S. H. Syed, M. E. Dickinson, P. Overbeek, Baylor College of Medicine (United States); K. V. Larin, Baylor College of Medicine (United States) and Univ. of Houston (United States)
- 8213 0C **Assessment of collagen changes in ovarian tissue by extracting optical scattering coefficient from OCT images** [8213-11]
Y. Yang, T. Wang, N. Biswal, Univ. of Connecticut (United States); X. Wang, M. Sanders, M. Brewer, Univ. of Connecticut Health Ctr. (United States); Q. Zhu, Univ. of Connecticut (United States)
- 8213 0D **Fourier domain OCT imaging of American cockroach nervous system** [8213-12]
J. Wyszowska, I. Gorczynska, D. Ruminski, K. Karnowski, A. Kowalczyk, M. Stankiewicz, M. Wojtkowski, Nicolaus Copernicus Univ. (Poland)

SESSION 3 OPHTHALMIC NEW TECHNOLOGY

- 8213 OH **Visible light optical coherence tomography for in vivo imaging the spectral contrasts of the retinal nerve fiber layer** [8213-16]
X. Zhang, The Univ. of Southern California (United States); J. Hu, The Univ. of Southern California (United States) and Chongqing Normal Univ. (China); R. W. Knighton, X.-R. Huang, Bascom Palmer Eye Institute (United States); C. A. Puliafito, S. Jiao, The Univ. of Southern California (United States)
- 8213 OL **Adaptive optics: optical coherence tomography system for in-vivo imaging of the mouse retina** [8213-20]
Y. Jian, A. Issaei, Simon Fraser Univ. (Canada); R. J. Zawadzki, Univ. of California, Davis (United States); M. V. Sarunic, Simon Fraser Univ. (Canada)

SESSION 4 NEW LIGHT SOURCES AND SYSTEMS

- 8213 OM **MEMS tunable VCSEL light source for ultrahigh speed 60kHz - 1MHz axial scan rate and long range centimeter class OCT imaging** [8213-21]
B. Potsaid, Thorlabs Inc. (United States) and Massachusetts Institute of Technology (United States); V. Jayaraman, Praevium Research, Inc. (United States); J. G. Fujimoto, Massachusetts Institute of Technology (United States); J. Jiang, Thorlabs Inc. (United States); P. J. S. Heim, Thorlabs Quantum Electronics Inc. (United States); A. E. Cable, Thorlabs Inc. (United States)
- 8213 OO **Coherence length extension of Fourier domain mode locked lasers** [8213-23]
D. C. Adler, LightLab Imaging LLC (United States); W. Wieser, Ludwig-Maximilians-Univ. München (Germany); F. Trepanier, TeraXion Inc. (Canada); J. M. Schmitt, LightLab Imaging LLC (United States); R. A. Huber, Ludwig-Maximilians-Univ. München (Germany)
- 8213 OP **Polarization maintaining buffered Fourier domain mode-locked swept source** [8213-24]
J. Zhang, J. Jing, P. Wang, Z. Chen, Beckman Laser Institute and the Ctr. For Biomedical Engineering (United States)
- 8213 OR **Broadband Fourier domain mode-locked laser for optical coherence tomography at 1060 nm** [8213-26]
S. Marschall, Technical Univ. of Denmark (Denmark); T. Klein, W. Wieser, Ludwig-Maximilians-Univ. München (Germany); T. Torzicky, M. Pircher, Medical Univ. of Vienna (Austria); B. R. Biedermann, Ludwig-Maximilians-Univ. München (Germany); C. Pedersen, Technical Univ. of Denmark (Denmark); C. K. Hitzenberger, Medical Univ. of Vienna (Austria); R. Huber, Ludwig-Maximilians-Univ. München (Germany); P. E. Andersen, Technical Univ. of Denmark (Denmark)
- 8213 OT **Long coherence length and linear sweep without an external optical k-clock in a monolithic semiconductor laser for inexpensive optical coherence tomography** [8213-28]
J. Ensher, P. Boschert, K. Featherston, J. Huber, M. Crawford, M. Minneman, Insight Photonic Solutions (United States); C. Chiccone, D. Derickson, California Polytechnic State Univ. (United States)

SESSION 5 CARDIOVASCULAR NEW TECHNOLOGY

- 8213 0X **In vivo intracardiac OCT imaging through percutaneous access: towards image guided radio-frequency ablation** [8213-32]
H. Wang, W. Kang, Case Western Reserve Univ. (United States); T. Carrigan, Univ. Hospitals Case Medical Ctr. (United States); A. Bishop, N. Rosenthal, M. Arruda, A. M. Rollins, Case Western Reserve Univ. (United States)
- 8213 0Y **Advances in a fully integrated intravascular OCT-ultrasound system for cardiovascular imaging** [8213-33]
J. Jing, J. Li, Univ. of California, Irvine (United States); X. Li, The Univ. of Southern California (United States); J. Yin, J. Zhang, Univ. of California, Irvine (United States); K. Hoang, Beckman Laser Institute and Medical Clinic (United States); P. Patel, Univ. of California, Irvine (United States); Q. Zhou, The Univ. of Southern California (United States); Z. Chen, Beckman Laser Institute and Medical Clinic (United States)

SESSION 6 IMAGING VASCULAR STRUCTURE AND FLOW: NEW TECHNOLOGY

- 8213 15 **Intensity-based modified Doppler variance algorithm dedicated for phase instable optical coherence tomography systems** [8213-40]
G. Liu, W. Jia, D. Chou, W. Qi, B. Choi, Z. Chen, Beckman Laser Institute and Medical Clinic (United States)

SESSION 7 CATHETER/ENDOSCOPIC AND CANCER

- 8213 1C **Image guided 3D OCT for early diagnosis of carcinoma in situ of the bladder** [8213-47]
H. Ren, K. C. Park, R. Pan, K. Shroyer, W. Waltzer, Y. Pan, Stony Brook Univ. Medical Ctr. (United States)

SESSION 8 OCT NEW TECHNOLOGY

- 8213 1E **Multi-MHz FDML OCT: snapshot retinal imaging at 6.7 million axial-scans per second** [8213-49]
T. Klein, W. Wieser, R. André, T. Pfeiffer, C. M. Eigenwillig, R. Huber, Ludwig-Maximilians-Univ. München (Germany)
- 8213 1F **Optical amplification of the signal and sensitivity of the ultrafast spectral domain optical coherence tomography at an A-scan rate of 10MHz in a wavelength region of 1300nm** [8213-50]
D. Choi, H. Hiro-oka, K. Shimizu, Kitasato Univ. (Japan); K. Ohbayashi, Kitasato Univ. School of Medicine (Japan)
- 8213 1G **Dual-depth SSOCT for simultaneous complex resolved anterior segment and conventional retinal imaging** [8213-51]
A.-H. Dhalla, T. Bustamante, D. Nanikivil, H. Hendargo, R. McNabb, A. Kuo, J. A. Izatt, Duke Univ. (United States)

- 8213 1H **Doppler streak mode Fourier domain optical coherence tomography** [8213-52]
R. Wang, J. X. Yun, Clemson Univ. (United States); R. Goodwin, Univ. of South Carolina (United States); R. Markwald, Medical Univ. of South Carolina (United States); R. B. Runyan, The Univ. of Arizona (United States); B. Gao, Clemson Univ. (United States)
- 8213 1J **Depth-ambiguity free or polarization sensitive optical frequency domain imaging using the Pancharatnam-Berry phase** [8213-54]
N. Lippok, S. Coen, R. Leonhardt, P. Nielsen, F. Vanholsbeeck, The Univ. of Auckland (New Zealand)
- 8213 1K **Analysis of the signal fall-off in spectral domain optical coherence tomography systems** [8213-55]
M. Hagen-Eggert, Medical Laser Ctr. Lübeck (Germany) and Univ. of Lübeck (United States); P. Koch, Thorlabs GmbH (Germany); G. Hüttmann, Univ. of Lübeck (Germany)
- 8213 1L **Multiple-depth en face optical coherence tomography using active recirculation loops in the non-stationary state** [8213-56]
J. A. Rogers, A. Bradu, A. Podoleanu, Univ. of Kent (United Kingdom)

SESSION 9 OCT NOVEL APPLICATIONS

- 8213 1M **Simultaneous dark-bright field swept source OCT for ultrasound detection** [8213-57]
C. Blatter, B. Grajciar, B. Hermann, Medical Univ. Vienna (Austria); R. Huber, Ludwig-Maximilians-Univ. München (Germany); W. Drexler, R. A. Leitgeb, Medical Univ. Vienna (Austria)
- 8213 1N **Optimizing magnetomotive contrast of SPIO-labeled platelets for thrombosis imaging in optical coherence tomography** [8213-58]
A. L. Oldenburg, D. Spivak, G. Wu, F. Tsui, T. H. Fischer, The Univ. of North Carolina at Chapel Hill (United States)
- 8213 1P **In vivo measurement of amplifying motion within the organ of Corti under sound stimulation using optical coherence tomography** [8213-60]
N. Choudhury, Michigan Technological Univ. (United States); F. Chen, D. Zha, A. Fridberger, J. Zheng, S. L. Jacques, Oregon Health & Science Univ. (United States); R. K. Wang, Univ. of Washington (United States); A. L. Nuttall, Oregon Health & Science Univ. (United States)
- 8213 1Q **Measuring the vibrational response of the mouse ear using coherently interleaved optical coherence tomography** [8213-61]
R. Shelton, Texas A&M Univ. (United States); S. Gao, Rice Univ. (United States); J. S. Oghalai, Stanford Univ. (United States); B. E. Applegate, Texas A&M Univ. (United States)
- 8213 1R **Spectral and time domain OCT: a tool for optimal imaging of biological samples** [8213-62]
M. Szkulmowski, I. Gorczyńska, D. Szlag, M. Wojtkowski, Nicolaus Copernicus Univ. (Poland)

SESSION 10 PHASE AND POLARIZATION SENSITIVE OCT

- 8213 1S **Imaging of photothermal tissue expansion via phase sensitive optical coherence tomography** [8213-63]
H. Spahr, L. Rudolph, H. Müller, Univ. of Lübeck (Germany); R. Birngruber, G. Hüttmann, Univ. of Lübeck (Germany) and Medical Laser Ctr. Lübeck (Germany)
- 8213 1V **Absolute measurement of subnanometer scale vibration of cochlear partition of an excised guinea pig cochlea using spectral-domain phase-sensitive optical coherence tomography** [8213-66]
H. M. Subhash, Oregon Health & Science Univ. (United States); N. Choudhury, Michigan Technological Univ. (United States); S. L. Jacques, Oregon Health & Science Univ. (United States); R. K. Wang, Oregon Health & Science Univ. (United States) and Univ. of Washington (United States); F. Chen, D. Zha, A. L. Nuttall, Oregon Health & Science Univ. (United States)
- 8213 1W **Automated detection of chorio-scleral interface using polarization-sensitive optical coherence tomography** [8213-67]
L. Duan, M. Yamanari, Y. Yasuno, Univ. of Tsukuba (Japan)

SESSION 11 NOVEL COHERENCE MICROSCOPY

- 8213 1Y **Optical coherence microscopy for deep tissue imaging of the cerebral cortex with intrinsic contrast** [8213-69]
V. J. Srinivasan, H. Radhakrishnan, Massachusetts General Hospital (United States) and Harvard Medical School (United States); J. Y. Jiang, S. Barry, A. E. Cable, Thorlabs Inc. (United States)
- 8213 24 **High resolution holoscopy** [8213-75]
G. L. Franke, Univ. of Lübeck (Germany) and Medical Laser Ctr. Lübeck (United States); D. Hillmann, Medical Laser Ctr. Lübeck (Germany) and Thorlabs GmbH (Germany); T. Claußen, C. Lührs, P. Koch, Thorlabs GmbH (Germany); G. Hüttmann, Univ. of Lübeck (Germany)

SESSION 12 SIGNAL/IMAGE PROCESSING

- 8213 28 **Morphological image analysis for classification of gastrointestinal tissues using optical coherence tomography** [8213-79]
P. B. Garcia-Allende, Imperial College London (United Kingdom) and Helmholtz Zentrum München GmbH (Germany); I. Amygdalos, Imperial College London (United Kingdom); H. Dhanapala, Imperial College Healthcare NHS Trust (United Kingdom); R. D. Goldin, G. B. Hanna, D. S. Elson, Imperial College London (United Kingdom)
- 8213 2B **Graphics processing unit-based ultrahigh speed real-time multidimensional Fourier domain optical coherence tomography** [8213-82]
K. Zhang, GE Global Research (United States); J. U. Kang, The Johns Hopkins Univ. (United States)
- 8213 2C **Digital refocusing in optical coherence tomography** [8213-83]
A. A. Moiseev, G. V. Gelikonov, P. A. Shilyagin, D. A. Terpelov, V. M. Gelikonov, Institute of Applied Physics (Russian Federation)

- 8213 2D **Graphics processing unit-based dispersion encoded full-range frequency domain OCT** [8213-84]
L. Wang, Cardiff Univ. (United Kingdom) and Katholieke Univ. Leuven (Belgium); B. Považay, Medical Univ. of Vienna (Austria); J. A. Guggenheim, Cardiff Univ. (United Kingdom); W. Drexler, B. Hofer, Medical Univ. of Vienna (Austria)

POSTER SESSION

- 8213 2E **Quantitative elastography of skin and skin lesion using phase-sensitive OCT (PhS-OCT) and surface wave method** [8213-85]
C. Li, G. Guan, Univ. of Dundee (United Kingdom) and Univ. of Washington (United States); Z. Huang, Univ. of Dundee (United Kingdom); R. Wang, Univ. of Washington (United States)
- 8213 2F **Discretely swept optical coherence tomography system using super-structure grating distributed Bragg reflector lasers at 1561-1639nm** [8213-86]
D. Choi, R. Yoshimura, H. Hiro-Oka, H. Furukawa, Kitasato Univ. (Japan); A. Goto, Canon Inc. (Japan); N. Satoh, A. Igarashi, M. Nakanishi, K. Shimizu, Kitasato Univ. (Japan); K. Ohbayashi, Kitasato Univ. School of Medicine (Japan)
- 8213 2G **Depth profile absorber concentration reconstruction using photothermal optical coherence tomography** [8213-87]
R. Reif, Univ. of Washington (United States); G. Guan, Univ. of Washington (United States) and Univ. of Dundee (United Kingdom); R. K. Wang, Univ. of Washington (United States)
- 8213 2J **Swept-source coherence-gated Shack-Hartmann wavefront sensor** [8213-90]
J. Wang, A. G. Podoleanu, Univ. of Kent (United Kingdom)
- 8213 2K **Automatic three-dimensional registration of intra-vascular optical coherence tomography images for the clinical evaluation of stent implantation over time** [8213-91]
G. J. Ughi, Catholic Univ. Leuven (Belgium); T. Adriaenssens, Univ. Hospitals Leuven (Belgium); M. Larsson, Catholic Univ. Leuven (Belgium) and Royal Institute of Technology (Sweden); C. Dubois, P. Sinnaeve, Catholic Univ. Leuven (Belgium) and Univ. Hospitals Leuven (Belgium); M. Coosemans, Univ. Hospitals Leuven (Belgium); W. Desmet, Catholic Univ. Leuven (Belgium) and Univ. Hospitals Leuven (Belgium); J. D'hooghe, Catholic Univ. Leuven (Belgium)
- 8213 2M **Resolution improvement in dual-band OCT by filling the spectral gap** [8213-93]
P. Cimalla, M. Gaertner, J. Walther, E. Koch, Dresden Univ. of Technology (Germany)
- 8213 2O **High-speed spectroscopic OCT around 1550 nm based on dual-band swept laser source** [8213-95]
R. Zhu, J. Xu, C. Zhang, E. Y. Lam, K. K. Y. Wong, The Univ. of Hong Kong (Hong Kong, China)
- 8213 2R **Microfluidics analysis of blood using joint spectral and time domain optical coherence tomography** [8213-98]
D. Bukowska, M. Szkulmowski, I. Gorczynska, A. Kowalczyk, M. Wojtkowski, Nicolaus Copernicus Univ. (Poland)
- 8213 2S **Polarization-sensitive optical coherence tomography measurements with different phase modulation amplitude when using continuous polarization modulation** [8213-99]
Z. Lu, D. K. Kasaragod, S. J. Matcher, The Univ. of Sheffield (United Kingdom)

- 8213 2T **Lateral resolution improvement in oversampled optical coherence tomography images assuming weighted oversampled multi-scatterer contributions** [8213-100]
E. Bousi, C. Pitris, Univ. of Cyprus (Cyprus)
- 8213 2V **Correction of phase-error for phase-resolved k-clocked optical frequency domain imaging** [8213-102]
J. Mo, J. Li, J. F. de Boer, Vrije Univ. Amsterdam (Netherlands)
- 8213 2W **High-speed polarization sensitive optical coherence tomography for retinal diagnostics** [8213-103]
B. Yin, B. Wang, The Univ. of Texas at Austin (United States); K. Vemishetty, J. Nagle, National Instruments Corp. (United States); S. Liu, T. Wang, H. G. Rylander III, T. E. Milner, The Univ. of Texas at Austin (United States)
- 8213 2Z **Speckle reduction in swept source optical coherence tomography images with slow-axis averaging** [8213-106]
O. Tan, Y. Li, Y. Wang, Casey Eye Institute, Oregon Health and Science Univ. (United States); M. F. Kraus, Massachusetts Institute of Technology (United States) and Univ. Erlangen-Nuremberg (Germany); J. J. Liu, Massachusetts Institute of Technology (United States); B. Potsaid, Massachusetts Institute of Technology (United States) and Thorlabs Inc. (United States); B. Baumann, Massachusetts Institute of Technology (United States) and New England Eye Ctr. (United States); J. G. Fujimoto, Massachusetts Institute of Technology (United States); D. Huang, Casey Eye Institute, Oregon Health and Science Univ. (United States)
- 8213 30 **Quantitative comparison of wavelength dependence on penetration depth and imaging contrast for ultrahigh-resolution optical coherence tomography using supercontinuum sources at five wavelength regions** [8213-107]
S. Ishida, N. Nishizawa, Nagoya Univ. (Japan)
- 8213 31 **Megahertz processing rate for Fourier domain optical coherence tomography using a graphics processing unit** [8213-108]
Y. Watanabe, D. Kamiyama, Yamagata Univ. (Japan)
- 8213 32 **Quantitative comparison of hardware architectures for high-speed processing in optical coherence tomography** [8213-109]
B. E. Applegate, J. Park, E. Carbajal, Texas A&M Univ. (United States); D. Schmidt, K. Vemishetty, National Instruments Corp. (United States)
- 8213 33 **Improvement of coherence length in a 200-kHz swept light source equipped with a KTN deflector** [8213-110]
S. Yagi, NTT Photonics Labs. (Japan); K. Naganuma, NTT Advanced Technology Corp. (Japan); T. Imai, Y. Shibata, J. Miyazu, M. Ueno, Y. Okabe, NTT Photonics Labs. (Japan); Y. Sasaki, K. Fujiura, NTT Advanced Technology Corp. (Japan); M. Sasaura, K. Kato, NTT Photonics Labs. (Japan); M. Ohmi, M. Haruna, Osaka Univ. (Japan)
- 8213 36 **Self-assembled quantum dot-based swept laser source for optical coherence tomography applications** [8213-113]
N. Peyvast, D. T. D. Childs, N. Krstajic, Z. Lu, S. J. Matcher, The Univ. of Sheffield (United Kingdom); D. Livshits, A. Shkolnik, I. Krestnikov, Innolume GmbH (Germany); R. A. Hogg, The Univ. of Sheffield (United Kingdom)

- 8213 37 **Enhancement of the signal-to-noise ratio at depths in Fourier domain optical coherence tomography** [8213-114]
A. Bradu, Univ. of Kent (United Kingdom); P. Bouchal, Brno Univ. of Technology (Czech Republic); A. G. Podoleanu, Univ. of Kent (United Kingdom)
- 8213 38 **Quantitative analysis of cardiomyocyte dynamics with optical coherence phase microscopy** [8213-115]
R. Ansari, R. Aherrahrou, Z. Aherrahrou, J. Erdmann, G. Hüttmann, A. Schweikard, Univ. of Lübeck (Germany)
- 8213 39 **Detailed software design of an ultra-parallel ultra-high speed SD-OCT for real-time 4D display at 12 volume/second** [8213-116]
H. Hiro-Oka, D. Choi, K. Shimizu, Kitasato Univ. (Japan); K. Ohbayashi, Kitasato Univ. School of Medicine (Japan)
- 8213 3A **High-power sweeping semiconductor light sources at 840 nm with up to 100 nm tuning range** [8213-117]
V. R. Shidlovskii, Superlum Ireland (Ireland); S. N. Ilchenko, A. A. Lobintsov, M. V. Shramenko, S. D. Yakubovich, Superlum Diodes Ltd. (Russian Federation)
- 8213 3C **Complex conjugate term manipulation in optical frequency-domain imaging using the time-frequency distribution** [8213-119]
N. Lippok, S. Coen, P. Nielsen, F. Vanholsbeeck, The Univ. of Auckland (New Zealand)
- 8213 3E **Dynamic analysis of mental sweating and the peripheral vessels for the activity of the autonomic nervous system by optical coherence tomography** [8213-121]
M. Ohmi, D. Takada, Y. Wada, M. Haruna, Graduate School of Medicine, Osaka Univ. (Japan)
- 8213 3G **Optical coherence tomography-based angle-resolved backscattering studies on bovine tendon and cartilage** [8213-123]
D. K. Kasaragod, Z. Lu, S. J. Matcher, The Univ. of Sheffield (United Kingdom)
- 8213 3H **Linear in-wavenumber optical spectrum registration in SD-OCT** [8213-124]
G. V. Gelikonov, V. M. Gelikonov, P. A. Shilyagin, Institute of Applied Physics (Russian Federation) and BioMedTech LLC (Russian Federation)
- 8213 3I **Polymer microlens fiber probe for common path optical coherence tomography** [8213-125]
H. Xiao, Y. Zhang, E. Pienkowski, T. Wei, X. Lan, Missouri Univ. of Science and Technology (United States)
- 8213 3L **Single-shot full complex spectrum spectrometer-based OCT with a single-line photodiode array** [8213-128]
G. V. Gelikonov, V. M. Gelikonov, A. A. Moiseev, P. A. Shilyagin, Institute of Applied Physics (Russian Federation)

- 8213 3M **Ex vivo optical coherence tomography imaging of larynx tissues using a forward-viewing resonant fiber-optic scanning endoscope** [8213-129]
R. Cernat, Univ. of Kent (United Kingdom); Y. Y. Zhang, The Johns Hopkins Univ. (United States); A. Bradu, Univ. of Kent (United Kingdom); T. Tatla, P. J. Tadrous, Northwick Park Hospital (United Kingdom); X. D. Li, The Johns Hopkins Univ. (United States); A. G. Podoleanu, Univ. of Kent (United Kingdom)
- 8213 3N **Parametric study of femtosecond inscription of microstructures for OCT artefact fabrication** [8213-130]
J. Rasakanthan, G. C. B. Lee, Aston Univ. (United Kingdom); P. D. Woolliams, National Physical Lab. (United Kingdom); K. Sugden, Aston Univ. (United Kingdom)
- 8213 3O **Linewidth of swept laser source** [8213-131]
H. Omran, S. Sakhawy, M. Shalaby, Ain Shams Univ. (Egypt); D. Khalil, Ain Shams Univ. (Egypt) and Si-Ware Systems (Egypt)

Author Index

Conference Committee

Symposium Chairs

James G. Fujimoto, Massachusetts Institute of Technology
(United States)
R. Rox Anderson, Wellman Center for Photomedicine, Massachusetts
General Hospital, Harvard School of Medicine (United States)

Program Track Chairs

Tuan Vo-Dinh, Duke University (United States)
Anita Mahadevan-Jansen, Vanderbilt University (United States)

Conference Chairs

Joseph A. Izatt, Duke University (United States)
James G. Fujimoto, Massachusetts Institute of Technology
(United States)
Valery V. Tuchin, N.G. Chernyshevsky Saratov State University
(Russian Federation)

Program Committee

Peter E. Andersen, Technical University of Denmark (Denmark)
Stephen A. Boppart, University of Illinois at Urbana-Champaign
(United States)
Zhongping Chen, Beckman Laser Institute and Medical Clinic
(United States)
Johannes F. de Boer, Vrije University Amsterdam (Netherlands)
Wolfgang Drexler, Medizinische Universität Wien (Austria)
Christoph K. Hitzenberger, Medizinische Universität Wien (Austria)
Rainer A. Leitgeb, Medizinische Universität Wien (Austria)
Xing D. Li, The Johns Hopkins University (United States)
Adrian Gh. Podoleanu, University of Kent (United Kingdom)
Andrew M. Rollins, Case Western Reserve University (United States)
Natalia M. Shakhova, Institute of Applied Physics (Russian Federation)
Guillermo J. Tearney, Wellman Center for Photomedicine
(United States)
Ruikang Wang, University of Washington (United States)
Maciej D. Wojtkowski, Nicolaus Copernicus University (Poland)
Yoshiaki Yasuno, University of Tsukuba (Japan)

Session Chairs

- 1 Imaging Vascular Structure and Flow: Ophthalmology
 Joseph A. Izatt, Duke University (United States)
- 2 New Clinical and Pre-Clinical Applications
 James G. Fujimoto, Massachusetts Institute of Technology
 (United States)
- 3 Ophthalmic New Technology
 Maciej D. Wojtkowski, Nicolaus Copernicus University (Poland)
- 4 New Light Sources and Systems
 Zhongping Chen, Beckman Laser Institute and Medical Clinic
 (United States)
- 5 Cardiovascular New Technology
 Guillermo J. Tearney, Massachusetts General Hospital (United States)
- 6 Imaging Vascular Structure and Flow: New Technology
 Ruikang Wang, University of Washington (United States)
- 7 Catheter/Endoscopic and Cancer
 Natalia M. Shakhova, Institute of Applied Physics (Russian Federation)
- 8 OCT New Technology
 Stephen A. Boppart, University of Illinois at Urbana-Champaign
 (United States)
- 9 OCT Novel Applications
 Wolfgang Drexler, Medizinische Universität Wien (Austria)
- 10 Phase and Polarization Sensitive OCT
 Christoph K. Hitzenberger, Medizinische Universität Wien (Austria)
- 11 Novel Coherence Microscopy
 Rainer Leitgeb, Medizinische Universität Wien (Austria)
- 12 Signal/Image Processing
 Valery V. Tuchin, N.G. Chernyshevsky Saratov State University
 (Russian Federation)

Introduction

These proceedings are from the Optical Coherence Tomography and Coherence Domain Optical Methods in Biomedicine XVI, held January 23-25, 2012 at the SPIE Photonics West Symposia in San Francisco, California. This year's conference featured 131 oral and poster presentations from leading national and international research groups.

The conference was organized into several sessions including: Imaging Vascular Structure and Flow: Ophthalmology; New Clinical and Pre-Clinical Applications; Ophthalmic New Technology; New Light Sources and Systems; Cardiovascular New Technology; Imaging Vascular Structure and Flow: New Technology; Catheter/Endoscopic and Cancer; OCT New Technology; OCT Novel Applications; Phase and Polarization Sensitive OCT; Novel Coherence Microscopy; Signal/Image Processing, and a poster session with 47 presentations. As usual, a predominant fraction of the papers focused on optical coherence tomography–basic research, instrumentation and applications.

This year, there were significant advances in clinical and biological applications (six sessions: Imaging Vascular Structure and Flow: Ophthalmology; New Clinical and Pre-Clinical Applications; Ophthalmic New Technology; Cardiovascular New Technology; Imaging Vascular Structure and Flow: New Technology; Catheter/Endoscopic and Cancer, with 40 oral and 15 poster presentations) with discussion of OCT technologies for non-invasive optical imaging of true capillary blood flow within microcirculatory tissue beds, high-resolution 3D vasculature imaging by adaptive optics OCT angiography, *in vivo* human retinal and choroidal vasculature visualization and measurement of choroidal blood flow, 3D measurement of blood flow based on intensity information analysis of OCT data, multiple blood flow imaging modes by ultrahigh speed dual-beam DOCT, angle-insensitive total axial flow measurement using transversal scanning DOCT, simultaneous *in vivo* structural and functional assessment of the microcirculation using correlation mapping OCT, real-time 3D dynamic imaging of airways reactivity, volumetric imaging of pulmonary pathology, assessment of collagen changes in ovarian tissue, imaging of American cockroach nervous system, ultrahigh speed and adaptive *in vivo* imaging of retina and retinal nerve fiber layer, measurement of embryonic cardiac dynamics, simultaneous high-resolution morphological and biochemical optical imaging of atherosclerosis and classification of atherosclerotic plaques, *in vivo* intracardiac imaging through percutaneous access, cardiovascular imaging using a fully integrated intravascular OCT-ultrasound system, 3D volumetric quantification of fibrous caps using intravascular OCT, simultaneous endoscopic OCT and fluorescence imaging using all-fiber optically based catheter system, preclinical study on breast cancer and cellular resolution imaging using a full-field OCT endoscopic probe, marking-guided biopsy in patients referred for screening or surveillance of Barrett's esophagus, early diagnosis of carcinoma *in situ* of the bladder, and etc.

Eight oral presentations in the session on New Light Sources and Systems reported advanced technologies and systems, such as MEMS tunable VCSEL light source for ultrahigh speed 100kHz - 1MHz axial scan rate and long range centimeter class OCT imaging, dispersion compensated megahertz FDML laser, coherence length extension of Fourier-domain mode locked lasers, polarization maintaining buffered Fourier domain mode-locked swept source, spacing-swept multi-wavelength source for deeper OCT imaging, broadband Fourier domain mode-locked 1060 nm-laser, dual-wavelength-swept active mode locking laser, a monolithic semiconductor laser with long coherence length for fast and inexpensive OCT systems was presented as well.

The session on OCT New Technology contained eight oral papers and was devoted to further development of OCT components and whole systems, such as multi-MHz FDML OCT allows for snapshot retinal imaging at 6.7 million axial-scans per second, ultrafast spectral domain system at an A-scan rate of 12.5 MHz at 1300 nm, dual-depth swept source OCT for simultaneous complex conjugate resolved eye anterior segment and retinal imaging and dispersion encoded full-range SSOCT at 1060 nm, streak-mode Fourier domain OCT, depth-ambiguity free PSOCT imaging using the Pancharatnam-Berry phase, multiple-depth en face OCT using active recirculation loops in the non-stationary state, and etc.

A special session on OCT Novel Applications contained six oral presentations with discussion of simultaneous dark-bright field swept SSOCT for ultrasound detection, optimizing magnetomotive contrast of SPIO-labeled platelets for thrombosis imaging, *in vivo* measurement of differential motion within the organ of Corti under sound stimulation and vibrational response of the mouse ear using coherently interleaved OCT, spectral and time domain OCT as a tool for optimal imaging of biological samples, and conformal laser therapy.

This year's Phase and Polarization Sensitive OCT (PSOCT) session with six oral presentations highlighted the following actual problems: polarimetry noise analysis and compensation, imaging of photothermal tissue expansion, design of ultrahigh speed swept source / Fourier domain PSOCT system, the possibility of automated measurement of choroidal thickness and chorio-scleral interface, as well as absolute measurement of subnanometer scale vibration of cochlear partition of an excised guinea pig cochlea.

The Novel Coherence Microscopy session presented eight oral papers on optical coherence microscopy (OCM) for deep tissue imaging of the cerebral cortex with intrinsic contrast, structural and functional imaging of the pathology of Alzheimer's disease in a mouse model using extended-focus OCM, sub-cellular resolution imaging of coronary arteries and respiratory mucosa using μ OCT, interferometric synthetic aperture microscopy with virtual adaptive optics aberration correction, combined two-photon microscopy and OCT for *in vivo* tissue imaging, quantifying sub-diffractional tissue mass density correlation function by spectroscopic OCT, high resolution holography, and study of development and dynamics of 3D mammary epithelial-stromal co-cultures using OCT.

The last session on Signal/Image Processing also contained eight oral presentations and discussed the following problems: anterior segment and retinal 3D-OCT motion correction using orthogonal scan patterns, morphological image analysis for classification of gastrointestinal tissues using OCT, joint OCT spectral and time domain processing applied to elastography, digital refocusing in OCT, hybrid FPGA and GPU acceleration of OCT angiography computation, and graphics processing unit-based ultra-high-speed real-time and dispersion encoded full-range FDOCT.

The poster session contained 47 papers on the major above mentioned topics.

Two short courses for engineers, scientists, and clinicians SC312 - *Principles and Applications of Optical Coherence Tomography* by James Fujimoto and SC1054 - *Bio-Interferometry* by David Nolte accompanied the conference.

All submissions were fully peer reviewed. Authors were requested to submit a 3-page summary of their paper. The program committee evaluated the submissions for technical content and assigned a numerical score to each paper. The selection of the papers as oral presentations, posters, or non-acceptance was based upon the program committee score. We have had very positive feedback and a record number of submissions and attendees again this year.

The conference chairs would like to thank the members of the technical program committee for their help in organizing the conference. We sincerely appreciate the support of the SPIE and the conference staff. Finally, we would like to thank all of the conference attendees and manuscript authors for their contributions and participation which helped to make this meeting a success.
