Proc. of SPIE Vol. 8216 821601-1

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Contents

vii	Conference Committee
ix	Introduction

SESSION 1 FUNCTIONAL DIFFUSE OPTICAL IMAGING

8216 04	Heat sensitive microbubbles for intraoperative assessment of cancer ablation margin [8216-03] J. Huang, J. S. Xu, C. Schmidt, R. X. Xu, The Ohio State Univ. (United States)
8216 06	PH-sensitive fluorescence detection by diffuse fluorescence tomography [8216-05] J. Li, F. Gao, L. Duan, X. Wang, L. Zhang, H. Zhao, Tianjin Univ. (China)
8216 07	Mammogram-based diffuse optical tomography [8216-06] H.-C. Chiang, J.-M. Yu, L.-Y. Chen, National Central Univ. (Taiwan); M.-C. Pan, Tung Nan Univ. (Taiwan); S.-Y. Sun, C.-C. Chou, TaoYuan General Hospital (Taiwan); M.-C. Pan, National Central Univ. (Taiwan)

SESSION 2 MICROSCOPIC IMAGING

8216 08	In vivo quantification of human dermal skin aging using SHG and autofluorescence [8216-07] S. Puschmann, C.-D. Rahn, H. Wenck, S. Gallinat, F. Fischer, Beiersdorf AG (Germany)
8216 09	Multimodal full-field optical coherence tomography on biological tissue: toward all optical digital pathology [8216-08] F. Harms, Ecole Supérieure de Physique et de Chimie Industrielles (France) and LLTECH SAS (France); E. Dalimier, LLTECH SAS (France); P. Vermeulen, A. Fragola, Ecole Supérieure de Physique et de Chimie Industrielles (France); A. C. Boccara, Ecole Supérieure de Physique et de Chimie Industrielles (France) and LLTECH SAS (France)
8216 0A	Combined FLIM and reflectance confocal microscopy for epithelial imaging [8216-09] J. M. Jabbour, S. Cheng, S. Shrestha, B. Malik, J. A. Jo, B. Applegate, K. C. Maitland, Texas A&M Univ. (United States)
8216 0B	Optical characters and texture maps of skin and the aging mechanism by use of multiphoton microscopy and optical coherence tomography [8216-10] S. Wu, H. Li, X. Zhang, Fujian Normal Univ. (China); Y. Huang, Fuzhou General Hospital (China); X. Xu, Fujian Normal Univ. (China)

SESSION 3 IMAGING ALGORITHMS

- 8216 0F **Quantifying the cortical contribution to the NIRS signal using simultaneous NIRS-BOLD measurements** [8216-14]
L. Gagnon, Harvard Medical School (United States) and Harvard-MIT Division of Health Sciences and Technology (United States); M. A. Yücel, Harvard Medical School (United States); M. Dehaes, Children's Hospital Boston (United States) and Harvard Medical School (United States); R. J. Cooper, Harvard Medical School (United States); K. L. Perdue, Dartmouth College (United States); J. Selb, Harvard Medical School (United States); D. A. Boas, Harvard Medical School (United States) and Harvard-MIT Division of Health Sciences and Technology (United States)
- 8216 0J **Fluorescence-enhanced optical tomography and nuclear imaging system for small animals** [8216-18]
I.-C. Tan, Y. Lu, C. Darne, J. C. Rasmussen, B. Zhu, A. Azhdarinia, The Univ. of Texas Health Science Ctr. at Houston (United States); S. Yan, A. M. Smith, Siemens Medical Solutions USA, Inc. (United States); E. M. Sevick-Muraca, The Univ. of Texas Health Science Ctr. at Houston (United States)
- 8216 0K **Time-reversal optical tomography: detecting and locating extended targets in a turbid medium** [8216-19]
B. Wu, W. Cai, The City Univ. of New York (United States); M. Xu, Fairfield Univ. (United States); S. K. Gayen, The City Univ. of New York (United States)
- 8216 0L **Towards single snapshot multispectral skin assessment** [8216-20]
J. Spigulis, D. Jakovels, L. Elste, Univ. of Latvia (Latvia)
- 8216 0M **Coaxial electrospray for multimodal imaging and image-guided therapy** [8216-21]
T. Si, Univ. of Science and Technology of China (China); L. Zhang, The Ohio State Univ. (United States); G. Li, Univ. of Science and Technology of China (China); C. J. Roberts, The Ohio State Univ. (United States); L. Jia, X. Yin, Univ. of Science and Technology of China (China); R. Xu, The Ohio State Univ. (United States)
- 8216 0N **Combined three-dimensional computer vision and epi-illumination fluorescence imaging system** [8216-22]
D. Gorpas, National Technical Univ. of Athens (Greece) and Technological Educational Institute of Messolonghi (Greece); D. Yova, K. Politopoulos, National Technical Univ. of Athens (Greece)

POSTER SESSION

- 8216 0O **Construction of the Jacobian matrix for fluorescence diffuse optical tomography using a perturbation Monte Carlo method** [8216-23]
X. Zhang, Duke Univ. Medical Ctr. (United States)
- 8216 0Q **Hybrid light transport model based bioluminescence tomography reconstruction for early gastric cancer detection** [8216-25]
X. Chen, J. Liang, Xidian Univ. (China); H. Hu, Fourth Military Medical Univ. (China); X. Qu, D. Yang, D. Chen, S. Zhu, J. Tian, Xidian Univ. (China)

- 8216 0R **Bimodal BLT source reconstruction based on adjoint diffusion equations** [8216-26]
Y. Hou, J. Liang, X. Qu, D. Chen, S. Zhu, J. Tian, Xidian Univ. (China)
- 8216 0U **GPU-accelerated Monte-Carlo modeling for fluorescence propagation in turbid medium** [8216-29]
X. Yi, W. Chen, L. Wu, W. Ma, W. Zhang, J. Li, X. Wang, F. Gao, Tianjin Univ. (China)
- 8216 0V **A high-sensitive diffuse fluorescence tomography system with CT-analogous scanning mode** [8216-30]
X. Wang, J. Li, X. Yi, L. Wu, W. Ma, W. Zhang, F. Gao, Tianjin Univ. (China)
- 8216 0W **A CT-analogous method for high-resolution fluorescence molecular tomography** [8216-31]
J. Li, F. Gao, Q. Zhu, F. Li, X. Wang, L. Zhang, H. Zhao, Tianjin Univ. (China)
- 8216 0X **Time-domain diffuse fluorescence tomography using BEM forward solver** [8216-32]
L. Wu, Y. Lu, W. Zhang, X. Yi, W. Ma, J. Li, X. Wang, H. Zhao, F. Gao, Tianjin Univ. (China)
- 8216 0Y **Time-domain diffuse fluorescence tomography of CT-analogous scheme: an experimental validation** [8216-33]
F. Gao, W. Chen, J. Li, W. Zhang, X. Yi, X. Wang, L. Zhang, Z. Zhou, H. Zhao, Tianjin Univ. (China)
- 8216 0Z **A time domain noncontact fluorescence tomography system for breast cancer diagnosis** [8216-34]
H. Guo, W. Meng, T. Wang, J. Li, H. Zhao, F. Gao, Tianjin Univ. (China)
- 8216 10 **Fluorescence guided diffusion optical tomography based on wavelet transform and singular value decomposition** [8216-35]
L. Zhang, W. Zhang, F. Gao, J. Li, H. Zhao, Tianjin Univ. (China)
- 8216 11 **Development of multimodal microscope combined with confocal imaging and two-photon imaging** [8216-36]
W. Chun, D. Do, D.-G. Gweon, KAIST (Korea, Republic of)
- 8216 13 **Examination of a demyelinated fiber by action-potential-encoded second harmonic generation** [8216-38]
X. Chen, Z. Luo, H. Yang, Y. Huang, S. Xie, Fujian Normal Univ. (China)
- 8216 14 **Combined intravascular photoacoustic and ultrasound imaging of atherosclerotic calcification in human artery** [8216-39]
W. Wei, Beckman Laser Institute, Univ. of California, Irvine (United States) and Wuhan Univ. (China); X. Li, Q. Zhou, K. K. Shung, The Univ. of Southern California (United States); Z. Chen, Beckman Laser Institute, Univ. of California, Irvine (United States)

Conference Committee

Symposium Chairs

James G. Fujimoto, Massachusetts Institute of Technology
(United States)

R. Rox Anderson, Wellman Center for Photomedicine, Massachusetts
General Hospital, Harvard School of Medicine (United States)

Program Track Chairs

Taun Vo-Dinh, Duke University (United States)

Anita Mahadevan-Jansen, Vanderbilt University (United States)

Conference Chairs

Fred S. Azar, Philips Medical Systems (United States)

Xavier Intes, Rensselaer Polytechnic Institute (United States)

Session Chairs

- 1 Functional Diffuse Optical Imaging
Fred S. Azar, Philips Medical Systems (United States)
Xavier Intes, Rensselaer Polytechnic Institute (United States)
- 2 Microscopic Imaging
Fred S. Azar, Philips Medical Systems (United States)
Frederic Leblond, Dartmouth College (United States)
- 3 Imaging Algorithms
Xavier Intes, Rensselaer Polytechnic Institute (United States)
Brian W. Pogue, Thayer School of Engineering at Dartmouth (United States)

Introduction

Data generated by novel imaging technologies such as optical tomography are complex to analyze due to the inherent scattering of light through anatomical systems. Cross validation and direct comparison with established methods in other imaging modalities are especially challenging. There is critical need for new computational techniques to provide rapid, accurate and cost-effective means for quantification and characterization of such data, either independently or integrated with other modalities. These computational methods will enable faster acceptance of novel imaging modalities into viable clinical and/or pre-clinical systems. The applications are diverse and range from imaging at the cellular level to the whole body while incorporating molecular, functional and anatomical information.

The conference objectives are to provide a forum:

- to review and share recent developments in novel multimodal imaging techniques,
- to report development of novel computational methods, and
- to bring together the optical imaging and image analysis communities.

Topics include, but are not limited to:

- multimodal imaging integrating structural, molecular and functional information
- 2D, 3D, 4D, tomographic and / or multi-spectral imaging
- imaging analysis and/or image processing techniques applied to optical imaging (e.g. visualization, segmentation, registration)
- detection and diagnostic analysis techniques which may provide better quantitative and/or diagnostic insight into clinical and pre-clinical imaging (e.g. methods for quantitative measurements, computer-assisted diagnosis)
- imaging analysis and/or image processing techniques used to combine optical imaging with other imaging modalities (e.g. MR, x-ray, PET)
- image analysis, computational methods and reconstruction approaches which may help bring optical imaging into the clinic (visual rendering of complex data set, novel algorithms for assisted optical reconstruction)
- clinical evaluation of these new technologies (Physiological and functional interpretation of image data, visual perception and observer performances, validation of quantitative assessment of optical signatures in-vivo).
