Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Introduction

Our conference Photons plus Ultrasound: Imaging and Sensing remained the largest conference within the Photonics West BiOS Symposium as shown in the following figure. It continues to attract leading researchers from both the optics and ultrasonics communities to the field of optoacoustic/photoacoustic/thermoacoustic imaging, sensing, and monitoring.

The Photons plus Ultrasound conference has established itself as the main forum for presenting the latest scientific advances in the field. Our conference inspired other societies, such as the Optical Society of America, Institute of Electrical and Electronic Engineers, and Society of Molecular Imaging to organize sessions on the technologies.

As in the past, the organizing committee recognized the leading researchers in the field by presenting the Best Paper Award and the Best Poster Award, sponsored by Seno Medical Instruments (San Antonio, Texas).

The Best Paper Award went to

- "Photoacoustic imaging of oxygen release from hemoglobin in single red blood cells in vivo" by Lidai Wang, Konstantin I. Maslov, and Lihong V. Wang. [8223-65, Presentation Only],

The Organization Committee also conferred two honorable mentions:

1. "Imaging breast lesions using the Twente photoacoustic mammoscope: ongoing clinical experience" by Michele Heijblom, Daniele Piras, Wenfeng Xia, Johan C. G. van Hespén, Frank M. van den Engh, Joost M. Klaase, Ton G. van Leeuwen, Wiendelt Steenbergen, and Srirang Manohar. Paper 82230C [8223-11].
2. "Multi-contrast photoacoustic microscopy" by Song Hu, Rebecca Sohn, Zhi-Hong Lu, Brian T. Soetinko, Qiaonan Zhong, Junjie Yao, Konstantin I. Maslov, Jeffrey M. Arbeit, and Lihong V. Wang. Paper 822310 [8223-34].

The Best Poster Award went to

- "Dichroism optical-resolution photoacoustic microscopy" by Song Hu, Konstantin Maslov, Ping Yan, Jin-Moo Lee, and Lihong V. Wang. Poster 82233T [8223-134].

We would like to congratulate the winners and thank all the contributors to this conference and the organizing committee for making our conference a great success! This volume of SPIE proceedings reflects the continuously increasing number of clinically relevant presentations and the high quality of basic research being conducted by our growing community.
