SPIE

Volume 8390

Proceedings of SPIE, 0277-786X, v. 8390

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Algorithms and Technologies for Multispectral, Hyperspectral, and Ultraspectral Imagery XVIII,
edited by Sylvia S. Shen, Paul E. Lewis, Proc. of SPIE Vol. 8390, 839001 · © 2012 SPIE
CCC code: 0277-786X/12/\$18 · doi: 10.1117/12.979120

Proc. of SPIE Vol. 8390 839001-1

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

The Transactional Reporting Service base fee for this volume is \$18.00 per article (or portion thereof), which should be paid directly to the Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923. Payment may also be made electronically through CCC Online at copyright.com. Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/12/\$18.00.

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Contents

Part One

xiii	Conference Committee
xvii	Introduction

SESSION 1 DETECTION, IDENTIFICATION, AND QUANTIFICATION I

8390 02	Progress in the theory of continuum fusion (Invited Paper) [8390-01] A. Schaum, U.S. Naval Research Lab. (United States)
8390 03	Confusion and clairvoyance: some remarks on the composite hypothesis testing problem [8390-02] J. Theiler, Los Alamos National Lab. (United States)
8390 04	Hyperspectral anomaly detection based on variable dimension for clutter subspace [8390-03] E. Lo, Susquehanna Univ. (United States)
8390 05	Kernel sparse representation for hyperspectral target detection [8390-04] Y. Chen, The Johns Hopkins Univ. (United States); N. M. Nasrabadi, U.S. Army Research Lab. (United States); T. D. Tran, The Johns Hopkins Univ. (United States)
8390 06	Parameter estimation for support vector anomaly detection in hyperspectral imagery [8390-05] R. Meth, J. Ahn, SET Corp. (United States); A. Banerjee, R. Juang, The Johns Hopkins Univ. Applied Physics Lab. (United States); P. Burlina, The Johns Hopkins Univ. Applied Physics Lab. (United States) and The Johns Hopkins Univ. (United States)

SESSION 2 MULTISENSOR DATA FUSION I

8390 07	Leveraging lidar data to aid in hyperspectral image target detection in the radiance domain [8390-06] E. J. Lentilucci, Rochester Institute of Technology (United States)
8390 09	Blob-level active-passive data fusion for Benthic classification [8390-08] J. Y. Park, H. Kalluri, A. Mathur, V. Ramnath, M. Kim, J. Aitken, Optech International, Inc. (United States); G. Tuell, Georgia Tech Research Institute (United States)

SESSION 3 SPECTRAL METHODOLOGIES AND APPLICATIONS

8390 0B	An automatic detection software for differential reflection spectroscopy [8390-10] S. E. Yuksel, T. Dubroca, R. E. Hummel, P. D. Gader, Univ. of Florida (United States)
---------	--

- 8390 0C **A multi-temporal analysis approach for land cover mapping in support of nuclear incident response** [8390-11]
S. Sah, J. A. N. van Aardt, D. M. McKeown, D. W. Messinger, Rochester Institute of Technology (United States)
- 8390 0D **Detection of anomalous activity in hyperspectral imaging: metrics for evaluating algorithms** [8390-12]
G. Sharon, R. Enbar, S. R. Rotman, D. G. Blumberg, Ben-Gurion Univ. of the Negev (Israel); A. Schlamm, D. Messinger, Rochester Institute of Technology (United States)
- 8390 0E **Mid-wave IFTS measurements of a laboratory-scale laminar flame** [8390-13]
M. R. Rhoby, K. C. Gross, Air Force Institute of Technology (United States)
- 8390 0G **Methods for estimating forest stem volumes by tree species using digital surface model and CIR images taken from light UAS** [8390-15]
H. Salo, V. Tirronen, I. Pölönen, Univ. of Jyväskylä (Finland); S. Tuominen, A. Balazs, Finnish Forest Research Institute (Finland); J. Heikkilä, PIEnengineering Ltd. (Finland); H. Saari, VTT Technical Research Ctr. of Finland (Finland)

SESSION 4 MODELING AND SIMULATION

- 8390 0H **DIRSIG 5: core design and implementation** [8390-16]
A. A. Goodenough, S. D. Brown, Rochester Institute of Technology (United States)
- 8390 0I **Parking lot process model incorporated into DIRSIG scene simulation** [8390-17]
J. Sun, D. Messinger, Rochester Institute of Technology (United States)
- 8390 0J **Geo-accurate model extraction from three-dimensional image-derived point clouds** [8390-18]
D. Nilosek, S. Sun, C. Salvaggio, Rochester Institute of Technology (United States)
- 8390 0K **Evaluation of image collection requirements for 3D reconstruction using photogrammetry techniques on sparse overhead data** [8390-19]
E. Ontiveros, C. Salvaggio, D. Nilosek, N. Raqueño, J. Faulring, Rochester Institute of Technology (United States)

SESSION 5 COMMERCIAL SPECTRAL REMOTE SENSING: WORLDVIEW-2 AND ITS APPLICATIONS I

- 8390 0L **WorldView-2 and the evolution of the DigitalGlobe remote sensing satellite constellation: introductory paper for the special session on WorldView-2 (Invited Paper)** [8390-20]
N. T. Anderson, G. B. Marchisio, DigitalGlobe, Inc. (United States)
- 8390 0M **Improving the automated detection of refugee/IDP dwellings using the multispectral bands of the WorldView-2 satellite** [8390-21]
T. Kemper, L. Gueguen, P. Soille, European Commission Joint Research Ctr. (Italy)
- 8390 0N **Using WorldView-2 Vis-NIR multispectral imagery to support land mapping and feature extraction using normalized difference index ratios** [8390-22]
A. F. Wolf, Ball Aerospace & Technologies Corp. (United States)

- 8390 0O **Mapping urban vegetation cover using WorldView-2 imagery** [8390-23]
F. Cavayas, Y. Ramos, A. Boyer, Univ. de Montréal (Canada)
- 8390 0P **Automating nearshore bathymetry extraction from wave motion in satellite optical imagery** [8390-100]
S. Mancini, R. C. Olsen, Naval Postgraduate School (United States); R. Abileah, jOmegak (United States); K. R. Lee, Naval Postgraduate School (United States)

SESSION 6 ADVANCEMENTS IN SPECTRAL SENSOR TECHNOLOGIES

- 8390 0Q **A LWIR hyperspectral imager using a Sagnac interferometer and cooled HgCdTe detector array** [8390-25]
P. G. Lucey, M. Wood, S. T. Crites, Univ. of Hawai'i at Manoa (United States); J. Akagi, Spectrum Photonics, Inc. (United States)
- 8390 0R **A compact LWIR hyperspectral system employing a microbolometer array and a variable gap Fabry-Perot interferometer employed as a Fourier transform spectrometer** [8390-26]
P. G. Lucey, Univ. of Hawai'i at Manoa (United States); J. L. Hinrichs, J. Akagi, Spectrum Photonics, Inc. (United States)
- 8390 0T **Snapshot hyperspectral fovea vision system (HyperVideo)** [8390-28]
J. Kriesel, G. Scriven, N. Gat, Opto Knowledge Systems, Inc. (United States); S. Nagaraj, P. Willson, V. Swaminathan, U.S. Army Armament Research, Development and Engineering Ctr. (United States)
- 8390 0U **Combination of a dispersive spectral imager and of a static Fourier transform spectral imager: study of concept** [8390-29]
Y. Ferrec, ONERA (France)

SESSION 7 ATMOSPHERIC CORRECTION METHODOLOGIES

- 8390 0V **High-speed atmospheric correction for spectral image processing** [8390-30]
T. Perkins, S. Adler-Golden, Spectral Sciences, Inc. (United States); P. Cappelaere, Vightel Corp. (United States); D. Mandl, NASA Goddard Space Flight Ctr. (United States)
- 8390 0W **Atmospheric compensation for WorldView-2 satellite and in-water component retrieval** [8390-31]
J. A. Concha, A. D. Gerace, Rochester Institute of Technology (United States)
- 8390 0Y **Atmospheric correction of the CASI hyperspectral image using the scattering angle by the direct solar beam** [8390-33]
M. Kim, J. Y. Park, J. Aitken, Optech International, Inc. (United States)
- 8390 1O **Atmospheric correction of short-wave hyperspectral imagery using a fast, full-scattering 1DVar retrieval scheme** [8390-35]
J. C. Thelen, S. Havemann, J. P. Taylor, Met Office (United Kingdom)

SESSION 8 SPECTRAL SIGNATURES, SPECTRAL LIBRARIES, AND APPLICATIONS I

- 8390 11 **Collection and quality control of spectral signatures in the field** [8390-36]
B. Curtiss, A. F. H. Goetz, ASD, Inc. (United States)
- 8390 12 **Spectral library generation for hyperspectral archaeological validation** [8390-37]
K. Canham, W. Middleton, D. Messinger, N. Raqueno, Rochester Institute of Technology (United States)
- 8390 13 **Point source emissions mapping using the Airborne Visible/Infrared Imaging Spectrometer (AVIRIS)** [8390-38]
A. K. Thorpe, D. A. Roberts, Univ. of California, Santa Barbara (United States); P. E. Dennison, Univ. of Utah (United States); E. S. Bradley, C. C. Funk, Univ. of California, Santa Barbara (United States)
- 8390 14 **Spectroscopic remote sensing for material identification, vegetation characterization, and mapping** [8390-39]
R. F. Kokaly, U.S. Geological Survey (United States)

SESSION 9 SPECTRAL DATA ANALYSIS METHODOLOGIES I

- 8390 15 **Data model LUT-based change and anomaly detection for real-time multispectral image characterization** [8390-40]
H. Jaenisch, The Johns Hopkins Univ. (United States) and Licht Strahl Engineering, Inc. (United States); J. Handley, Licht Strahl Engineering, Inc. (United States)
- 8390 16 **Anomalous and matched hyperspectral change detection applications for SHARE data collection** [8390-41]
J. Meola, Air Force Research Lab. (United States); J. A. Herweg, Rochester Institute of Technology (United States) and Air Force Institute of Technology (United States)
- 8390 17 **Developing a portable GPU library for hyperspectral image processing** [8390-42]
G. J. Pérez-Irizarry, F. De La Cruz-Sanchez, B. A. Landrón-Rivera, N. G. Santiago, M. Velez-Reyes, Univ. de Puerto Rico Mayagüez (United States)
- 8390 18 **Development of an efficient automated hyperspectral processing system using embedded computing** [8390-43]
M. S. Brown, E. Glaser, S. Grassinger, A. Slone, M. Salvador, Logos Technologies, Inc. (United States)
- 8390 19 **Integrating spectral preprocessing, spatial subband decomposition, and linear prediction to accomplish lossy ultraspectral image compression** [8390-44]
R. Herrero, V. K. Ingle, Northeastern Univ. (United States)
- 8390 1A **Hyperspectral imaging using compressed sensing** [8390-45]
G. E. Ramirez I., V. Manian, Univ. de Puerto Rico Mayagüez (United States)

- 8390 1B **Computational modeling of skin reflectance spectra for biological parameter estimation through machine learning** [8390-99]
 S. Vyas, The Johns Hopkins Univ. Applied Physics Lab. (United States) and The Johns Hopkins Univ. (United States); H. Van Nguyen, Univ. of Maryland, College Park (United States); P. Burlina, The Johns Hopkins Univ. Applied Physics Lab. (United States) and The Johns Hopkins Univ. (United States); A. Banerjee, The Johns Hopkins Univ. Applied Physics Lab. (United States); L. Garza, The Johns Hopkins Univ. (United States); R. Chellappa, Univ. of Maryland, College Park (United States)

SESSION 10 SPECTRAL SIGNATURES, SPECTRAL LIBRARIES, AND APPLICATIONS II

- 8390 1C **Hyperspectral measurements of natural signatures: pedestrians** [8390-47]
 J. A. Herweg, Rochester Institute of Technology (United States) and Air Force Institute of Technology (United States); J. P. Kerekes, Rochester Institute of Technology (United States); M. T. Eismann, Air Force Research Lab. (United States)
- 8390 1D **Linking goniometer measurements to hyperspectral and multisensor imagery for retrieval of beach properties and coastal characterization** [8390-48]
 C. M. Bachmann, D. Gray, A. Abelev, U.S. Naval Research Lab. (United States); W. Philpot, Cornell Univ. (United States); M. J. Montes, R. Fusina, U.S. Naval Research Lab. (United States); J. Musser, Stephen F. Austin State Univ. (United States); R.-R. Li, M. Vermillion, G. Smith, D. Korwan, C. Snow, U.S. Naval Research Lab. (United States); W. D. Miller, CPI (United States); J. Gardner, M. Sletten, U.S. Naval Research Lab. (United States); G. Georgiev, Sigma Space Corp. (United States); B. Truitt, M. Killmon, The Nature Conservancy (United States); J. Sellars, J. Woolard, C. Parrish, National Oceanic and Atmospheric Administration (United States); A. Schwarzschild, Univ. of Virginia (United States)
- 8390 1F **Spectral-feature-based analysis of reflectance and emission spectral libraries and imaging spectrometer data** [8390-50]
 F. A. Kruse, Naval Postgraduate School (United States)

Part Two

SESSION 11 COMMERCIAL SPECTRAL REMOTE SENSING: WORLDVIEW-2 AND ITS APPLICATIONS II

- 8390 1G **Using WorldView-2 imagery to track flooding in Thailand in a multi-asset sensorweb** [8390-51]
 D. McLaren, J. Doubleday, S. Chien, Jet Propulsion Lab. (United States)
- 8390 1H **Automatic estimation of volcanic ash plume height using WorldView-2 imagery** [8390-52]
 D. McLaren, D. R. Thompson, A. G. Davies, Jet Propulsion Lab. (United States); M. T. Gudmundsson, Univ. of Iceland (Iceland); S. Chien, Jet Propulsion Lab. (United States)
- 8390 1I **Using multi-angle WorldView-2 imagery to determine ocean depth near the island of Oahu, Hawaii** [8390-53]
 K. R. Lee, R. C. Olsen, F. A. Kruse, Naval Postgraduate School (United States)

8390 1J **WorldView-2 bathymetric capabilities** [8390-54]
G. Miecznik, DigitalGlobe, Inc. (United States); D. Grabowska, Univ. of Washington (United States)

8390 1K **Refinement of a method for identifying probable archaeological sites from remotely sensed data** [8390-55]
J. C. Tilton, NASA Goddard Space Flight Ctr. (United States); D. C. Comer, Cultural Site Research and Management (United States); C. E. Priebe, D. Sussman, L. Chen, The Johns Hopkins Univ. (United States)

SESSION 12 SPECTRAL UNMIXING

8390 1L **Using physics-based macroscopic and microscopic mixture models for hyperspectral pixel unmixing** [8390-56]
R. Close, P. Gader, J. Wilson, Univ. of Florida (United States); A. Zare, Univ. of Missouri-Columbia (United States)

8390 1M **Priors in sparse recursive decompositions of hyperspectral images** [8390-57]
N. Gillis, Univ. of Waterloo (Canada); R. J. Plemmons, Wake Forest Univ. (United States); Q. Zhang, Wake Forest Univ. Health Sciences (United States)

8390 1N **Incorporating local information in unsupervised hyperspectral unmixing** [8390-58]
M. A. Goenaga-Jimenez, M. Velez-Reyes, Univ. de Puerto Rico Mayagüez (United States)

8390 1O **Unsupervised unmixing analysis based on multiscale representation** [8390-59]
M. C. Torres-Madronero, M. Velez-Reyes, Univ. de Puerto Rico Mayagüez (United States)

SESSION 13 CLUSTERING AND CLASSIFICATION

8390 1P **A spectral image clustering algorithm based on ant colony optimization** [8390-60]
L. Ashok, Univ. of Rochester (United States); D. W. Messinger, Rochester Institute of Technology (United States)

8390 1Q **Hyperspectral image segmentation using spatial-spectral graphs** [8390-61]
D. B. Gillis, J. H. Bowles, U.S. Naval Research Lab. (United States)

8390 1R **Kernel-based joint spectral and spatial exploitation using Hilbert space embedding for hyperspectral classification** [8390-62]
P. Gurram, H. Kwon, U.S. Army Research Lab. (United States)

8390 1S **Automatically enumerating image data clusters using pixel co-density** [8390-63]
R. A. Mercovich, Rochester Institute of Technology (United States)

SESSION 14 COMMERCIAL SPECTRAL REMOTE SENSING: WORLDVIEW-2 AND ITS APPLICATIONS III

8390 1U **Feature extraction, anomaly, and change detection on WorldView-2 imagery by hierarchical image segmentation: a study** [8390-65]
L. Prasad, J. Theiler, M. Fair, S. Swaminarayan, Los Alamos National Lab. (United States)

- 8390 1V **In-track multi-angle model portability of multispectral land-cover classification using very high spatial resolution data** [8390-66]
N. Longbotham, Univ. of Colorado at Boulder (United States); F. Pacifici, DigitalGlobe, Inc. (United States); W. Emery, Univ. of Colorado at Boulder (United States)
- 8390 1W **An automated approach for constructing road network graph from multispectral images** [8390-67]
W. Sun, D. W. Messinger, Rochester Institute of Technology (United States)
- 8390 1X **Fusing stereo and multispectral data from WorldView-2 for urban modeling** [8390-68]
T. Krauß, B. Sirmacek, H. Arefi, P. Reinartz, Deutsches Zentrum für Luft- und Raumfahrt e.V. (Germany)
- 8390 1Y **Detection of compound structures using a Gaussian mixture model with spectral and spatial constraints** [8390-69]
Ç. Ari, S. Aksoy, Bilkent Univ. (Turkey)

SESSION 15 SPECTRAL DATA ANALYSIS METHODOLOGIES II

- 8390 1Z **Assessing the impact of background spectral graph construction techniques on the topological anomaly detection algorithm** [8390-70]
A. K. Ziemann, D. W. Messinger, J. A. Albano, W. F. Basener, Rochester Institute of Technology (United States)
- 8390 20 **Anomaly and target detection by means of nonparametric density estimation** [8390-71]
G. A. Tidhar, S. R. Rotman, Ben-Gurion Univ. of the Negev (Israel)
- 8390 21 **Nonsingular approximations for a singular covariance matrix** [8390-72]
N. Gorelik, D. Blumberg, S. R. Rotman, Ben-Gurion Univ. of the Negev (Israel); D. Borghys, Royal Military Academy (Belgium)
- 8390 22 **Simultaneous spectral/spatial detection of edges for hyperspectral imagery: the HySPADE algorithm revisited** [8390-73]
R. G. Resmini, George Mason Univ. (United States)
- 8390 23 **Autonomous target dependent waveband selection for tracking in performance-driven hyperspectral sensing** [8390-74]
S. M. Gadaleta, Numerica Corp. (United States); J. Kerekes, Rochester Institute of Technology (United States); K. M. Tarplee, Numerica Corp. (United States)
- 8390 24 **Application specific band selection with multivariate methods of analysis for α -Si:H multispectral photodiodes** [8390-75]
C. Merfort, A. Bablich, Univ. Siegen (Germany); O. Schwaneberg, Hochschule Bonn-Rhein-Sieg Univ. of Applied Sciences (Germany); K. Watty, M. Boehm, Univ. Siegen (Germany)
- 8390 25 **A new compact representation of morphological profiles: report on first massive VHR image processing at the JRC** [8390-76]
M. Pesaresi, G. K. Ouzounis, L. Gueguen, European Commission Joint Research Ctr. (Italy)

SESSION 16 MULTISENSOR DATA FUSION II

- 8390 26 **Remote sensing of shorelines using data fusion of hyperspectral and multispectral imagery acquired from mobile and fixed platforms** [8390-77]
C. R. Bostater, H. Frystacky, Florida Institute of Technology (United States)
- 8390 27 **Integration of heterogeneous data for classification in hyperspectral satellite imagery** [8390-78]
J. Benedetto, W. Czaja, J. Dobrosotskaya, T. Doster, K. Duke, Univ. of Maryland, College Park (United States); D. Gillis, U.S. Naval Research Lab. (United States)
- 8390 28 **SpectTIR hyperspectral airborne Rochester experiment data collection campaign** [8390-79]
J. A. Herweg, Rochester Institute of Technology (United States) and Air Force Institute of Technology (United States); J. P. Kerekes, Rochester Institute of Technology (United States); O. Weatherbee, SpectTIR, LLC (United States); D. Messinger, J. van Aardt, E. Ientilucci, Z. Ninkov, J. Faulring, N. Raqueño, Rochester Institute of Technology (United States); J. Meola, Air Force Research Lab. (United States)
- 8390 29 **NASA IMAGESEER: NASA IMAGES for Science, Education, Experimentation, and Research** [8390-80]
J. Le Moigne, T. G. Grubb, B. C. Milner, NASA Goddard Space Flight Ctr. (United States)

SESSION 17 SPECTRAL SENSOR CHARACTERIZATION AND CALIBRATION

- 8390 2A **Using DIRSIG to identify uniform sites and demonstrate the utility of the side-slither calibration technique for Landsat's new pushbroom instruments** [8390-81]
A. D. Gerace, J. R. Schott, S. D. Brown, M. G. Gartley, Rochester Institute of Technology (United States)
- 8390 2B **On-orbit radiometric calibration of Earth-observing sensors using the Radiometric Calibration Test Site (RadCaTS)** [8390-82]
J. S. Czapla-Myers, N. P. Leisso, N. J. Anderson, S. F. Biggar, College of Optical Sciences, The Univ. of Arizona (United States)
- 8390 2C **Tracking nonuniformity in the thermal infrared sensor through pre-launch measurements and simulated on-orbit data** [8390-83]
M. Montanaro, Sigma Space Corp. (United States) and NASA Goddard Space Flight Ctr. (United States); A. D. Gerace, Rochester Institute of Technology (United States)
- 8390 2D **Evaluation of nighttime imaging limits of visible near-infrared Earth observation platforms** [8390-84]
M. Gartley, A. Gerace, Rochester Institute of Technology (United States)

SESSION 18 DETECTION, IDENTIFICATION, AND QUANTIFICATION II

- 8390 2G **Euclidean commute time distance embedding and its application to spectral anomaly detection** [8390-87]
J. A. Albano, D. W. Messinger, Rochester Institute of Technology (United States)

- 8390 2I **Algorithms for remote quantification of chemical plumes: a comparative study** [8390-89]
S. Niu, Northeastern Univ. (United States); S. E. Golowich, D. G. Manolakis, MIT Lincoln Lab. (United States)
- 8390 2J **Comparative evaluation of hyperspectral anomaly detectors in different types of background** [8390-90]
D. Borghys, Royal Belgian Military Academy (Belgium); I. Kasen, Norwegian Defence Research Establishment (Norway); V. Achard, ONERA (France); C. Perneel, Royal Belgian Military Academy (Belgium)

POSTER SESSION

- 8390 2M **DSP design for real-time hyperspectral target detection based on spatial-spectral information extraction** [8390-93]
W. Yang, Ctr. for Earth Observation and Digital Earth (China) and Graduate Univ. of the Chinese Academy of Sciences (China); B. Zhang, L. Gao, Y. Wu, Ctr. for Earth Observation and Digital Earth (China)
- 8390 2N **A target segmentation algorithm based on multivariate statistics and RX anomaly detection** [8390-94]
Q. Guo, Ctr. for Earth Observation and Digital Earth (China) and Graduate Univ. of the Chinese Academy of Sciences (China); B. Zhang, L. Gao, X. Sun, W. Zhang, Ctr. for Earth Observation and Digital Earth (China)
- 8390 2O **Vehicle detection in WorldView-2 satellite imagery based on Gaussian modeling and contextual learning** [8390-95]
B. Shen, Advanced Micro Devices, Inc. (United States); C.-H. Chen, Univ. of Massachusetts Dartmouth (United States); G. B. Marchisio, DigitalGlobe, Inc. (United States)
- 8390 2P **Data-driven ultrasonic signal analysis using empirical mode decomposition for nondestructive material evaluation** [8390-96]
B. Shen, Advanced Micro Devices, Inc. (United States); C.-H. Chen, Univ. of Massachusetts Dartmouth (United States)
- 8390 2Q **Developing high resolution clutter for wireless network propagation using WorldView-2 imagery** [8390-97]
B. Gwata, ComputaMaps (South Africa)
- 8390 2R **Evaluation of supervised classification by class and classification characteristics** [8390-98]
A. Masse, D. Ducrot, Ctr. d'Etudes Spatiales de la Biosphère, CNRS (France); P. Marthon, Institut de Recherche en Informatique de Toulouse, CNRS (France)

Author Index

Conference Committee

Symposium Chair

Kevin P. Meiners, Office of the Secretary of Defense (United States)

Symposium Cochair

Kenneth R. Israel, Lockheed Martin Corporation (United States)

Conference Chairs

Sylvia S. Shen, The Aerospace Corporation (United States)

Paul E. Lewis, National Geospatial-Intelligence Agency (United States)

Program Committee

Gail P. Anderson, Air Force Research Laboratory (United States)

Hsiao-hua K. Burke, MIT Lincoln Laboratory (United States)

Chein-I Chang, University of Maryland, Baltimore County
(United States)

Eustace L. Dereniak, College of Optical Sciences, The University of
Arizona (United States)

Michael T. Eismann, Air Force Research Laboratory (United States)

Session Chairs

- 1 Detection, Identification, and Quantification I
Sylvia S. Shen, The Aerospace Corporation (United States)

- 2 Multisensor Data Fusion I
Grady H. Tuell, Georgia Tech Research Institute (United States)

- 3 Spectral Methodologies and Applications
Miguel Velez-Reyes, Universidad de Puerto Rico Mayagüez
(United States)
- 4 Modeling and Simulation
David W. Messinger, Rochester Institute of Technology (United States)
- 5 Commercial Spectral Remote Sensing: WorldView-2 and Its
Applications I
Giovanni B. Marchisio, DigitalGlobe Inc. (United States)
- 6 Advancements in Spectral Sensor Technologies
Paul E. Lewis, National Geospatial-Intelligence Agency (United States)
- 7 Atmospheric Correction Methodologies
Gail P. Anderson, Air Force Research Laboratory (United States)
- 8 Spectral Signatures, Spectral Libraries, and Applications I
Fred A. Kruse, Naval Postgraduate School (United States)
- 9 Spectral Data Analysis Methodologies I
Miguel Velez-Reyes, Universidad de Puerto Rico Mayagüez
(United States)
- 10 Spectral Signatures, Spectral Libraries, and Applications II
Fred A. Kruse, Naval Postgraduate School (United States)
- 11 Commercial Spectral Remote Sensing: WorldView-2 and Its
Applications II
Giovanni B. Marchisio, DigitalGlobe, Inc. (United States)
- 12 Spectral Unmixing
Michael T. Eismann, Air Force Research Laboratory (United States)
- 13 Clustering and Classification
Michael T. Eismann, Air Force Research Laboratory (United States)
- 14 Commercial Spectral Remote Sensing: WorldView-2 and Its
Applications III
Giovanni B. Marchisio, DigitalGlobe, Inc. (United States)
- 15 Spectral Data Analysis Methodologies II
David W. Messinger, Rochester Institute of Technology (United States)
- 16 Multisensor Data Fusion II
Grady H. Tuell, Georgia Tech Research Institute (United States)

- 17 Spectral Sensor Characterization and Calibration
Paul E. Lewis, National Geospatial-Intelligence Agency (United States)
- 18 Detection, Identification, and Quantification II
Sylvia S. Shen, The Aerospace Corporation (United States)

Introduction

This Proceedings of SPIE volume constitutes the 18th Annual Conference on Algorithms and Technologies for Multispectral, Hyperspectral, and Ultraspectral Imagery. The continuing objectives of this conference are to demonstrate the utility and to advance the capabilities of algorithms, sensors, and applications for multispectral, hyperspectral, and ultraspectral imagery by providing a forum for comprehensive insight into the field of spectral remote sensing. This conference endeavors to facilitate the exchange of information and new ideas amongst the community of spectral sensor system developers, automated processing system and algorithm developers, atmospheric phenomenology researchers, spectral data analysts, geo-spatial information researchers, and developers of specific commercial, civil, homeland security, environmental, and defense applications using remotely sensed spectral data.

The availability of high quality spectral data replete with sufficient and relevant "ground truth and metadata" information to be useful to the community mentioned above has always been a challenge. Informing this community on the availability of quality spectral data has always been a goal of this conference. During this year's conference, two papers were given depicting high quality data sets of which our conference attendees and readers of this Proceedings volume should be aware.

The first paper:

IMAGESEER: images for science, education, experimentation and research: a NASA database of benchmark images for image processing teaching and research [8390-80]

Jacqueline J. Le Moigne, Thomas G. Grubb, Barbara C. Milner, NASA Goddard Space Flight Center (United States)

IMAGESEER is a new web portal that brings easy access to NASA image data for non-NASA researchers, educators, and students. It provides representative NASA image datasets, available in two easily readable formats, with associated reference benchmark data that enable teaching Image Processing (IP) techniques on NASA data, as well as provide reference benchmark data to validate new IP algorithms.

Compared to other larger NASA data repositories, the IMAGESEER database is deliberately much smaller and focused in scope. Through a graphically-rich web site for browsing and downloading all of the selected datasets, benchmarks, and tutorials, IMAGESEER provides a widely accessible database of NASA-centric, easy to read, image data along with the following information: basic knowledge of the application domains, "truth

data" results (e.g., classification maps for image classification algorithms, transformation parameters for image registration algorithms, features locations for image analysis algorithms) and specific problems to be solved (or challenges), as defined by domain scientists.

The first prototype includes a representative sampling of NASA multispectral and hyperspectral images from several Earth Science instruments, along with a few small tutorials (also referred to as Imagepedia). Image processing techniques are currently represented with cloud detection, image registration, and map cover/classification. For each technique, corresponding data are selected from four different geographic regions, i.e., mountains (Colorado), urban (Los Angeles), water coastal (Chesapeake Bay), and agriculture (Illinois) areas. Satellite images have been collected from several instruments - Landsat-5 and -7 Thematic Mappers, Earth Observing -1 (EO-1) Advanced Land Imager (ALI) and Hyperion, and the Moderate Resolution Imaging Spectroradiometer (MODIS). After geo-registration, these images are available in simple common formats such as GeoTIFF and raw formats, along with associated benchmark data. These benchmarks or validation data include cloud cover masks and assessments, geo-registered scenes and classification maps from the National Land Cover Data (NLCD) database gathered in 1992 and 2001 by the Multi-Resolution Land Characteristics Consortium (MRLC).

Eventually, the database will include additional data from Earth Science, Planetary and Exploration Science, as well as additional challenges such as gap filling/in-painting, planetary-specific challenges such as crater and boulder detection and counting and mineralogy, and exploration-specific challenges such as obstacle avoidance and path planning. IMAGESEER is ideal for helping educators and students learn image processing techniques needed for and with actual NASA data and for helping researchers develop new algorithms or adapt existing algorithms to NASA data and challenges, therefore fostering collaboration between NASA and research organizations.

For more information, visit the IMAGESEER website at <http://imageseer.nasa.gov>

The second paper:

SpectTIR hyperspectral airborne Rochester experiment data collection campaign [8390-79]

Jared Herweg, John P. Kerekes, Rochester Institute of Technology (United States); Oliver Weatherbee, SpecTIR, LLC (United States); David Messinger, Jan van Aardt, Emmett Ientilucci, Zoran Ninkov, Carl Salvaggio, Nina G. Raqueño, Jason Faulring, Rochester Institute of Technology (United States); Joseph Meola, Air Force Research Lab. (United States)

In July of 2010, the Digital Imaging and Remote Sensing (DIRS) Laboratory at The Rochester Institute of Technology (RIT) conducted a coincident multi-modal imagery data collection campaign. With the help of SpectIR LLC, Kucera International, and a host of people, the SpectIR Hyperspectral Airborne Rochester Experiment (SHARE) was executed. SHARE contains data from an airborne hyperspectral imager, a laser detection and ranging (LiDAR) system, and a high resolution multi-spectral imaging system collected over the Rochester, New York area 26–29 July 2010. The data supports nine simultaneous unique experiments, several of which leverage data from multiple modalities. In addition, the SHARE data collection should provide the remote sensing research community with a multi-modal data package resource suitable for additional uni- and multi-modal phenomenology studies. The data collection sites include the Genesee River, a portion of the city of Rochester, which is included as part of the Digital Imaging and Remote Sensing Image Generation (DIRSIG) Mega Scene 1, and the RIT campus itself. As such, open water, wetlands, and urban environments are included in SHARE data set. The data are hosted at <http://dirs.cis.rit.edu/resources> and are meant to be a community sharable resource, freely downloadable, for use in scientific inquiry.

We would like to take this opportunity to offer special thanks to Jacqueline J. Le Moigne et al and Jared Herweg et al for presenting this information at our conference, and to their respective organizations for making this data available to our community of spectral remote sensing researchers.

Sylvia S. Shen
Paul E. Lewis
