Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID Number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID Number.

Lee, Professor of Manufacturing Engineering and Director of Advanced Technology Manufacturing Research Centre, Hong Kong Polytechnic University; Dr. Fengzhou Fang, Professor of Precision Measurement Technology and Instruments at Tianjin University (China); Prof. Shengyi Li, Professor of Mechatronics and Automation at the National University of Defense Technology (China). More than 1,000 people attended the opening ceremony and full-day plenary sessions.

More than 1,000 abstracts were submitted to AOMATT2012, and from these about 500 oral and poster papers were selected. Oral papers were presented in 8 parallel conferences on April 27 and 28. An all-symposium poster session was held in the afternoon of April 28. All of the parallel conference sessions and the poster session were well attended. Authors and attendees had active discussions and exchange of ideas throughout the symposium. Many papers presented cutting-edge research and development work in optical design, manufacturing, and testing. The success of AOMATT2012 continued the tradition of focus and excellence of this biannual international topical symposium in China.

We would like to express our sincere appreciation to COS - The Chinese Optical Society, IOE - Institute of Optics and Electronics, Chinese Academy of Sciences, and SPIE for sponsoring and supporting AOMATT2012. We want to thank all authors and participants for their contributions to the symposium and sharing their research with colleagues around the world. The 7th AOMATT is planned for 2014.

We look forward to seeing everyone at AOMATT2014. Please watch for the Call for Papers and symposium announcements on SPIE and IOE web sites.
