Proceedings of SPIE, 0277-786X, v. 8423

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Introduction

This Metamaterials Conference, the seventh in the series, has brought an increased number of contributions, no doubt encouraged by excellent contributions from our keynote speakers. As expected from Photonics Europe, the emphasis was on optical metamaterials. Plasmonics and optical metamaterials occupy similar territory with two of the eleven sessions in this conference devoted to them. Chirality, tunable metamaterials, and advanced fabrication continued as recurring themes. New significant areas were nonlinear effects which filled two sessions: magnetic metamaterials and metamaterials involving nanoparticles.

We returned to Brussels which has the added advantage of proximity to the administrative centre of the EU. Here several of the joint European projects are funded, allowing convenient access to the latest work across the field.

The chairs of the meeting would like to thank all contributors to the conference, the SPIE team, and the programme committee.
