Publication of record for individual papers is online in the SPIE Digital Library.

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID Number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID Number.

Contents

vii	Conference Committee
ix	Introduction

SESSION 1 INFRARED ACTIVITIES AT THE JET PROPULSION LABORATORY

8511 02	Infrared instrument support for HypsIRI-TIR [8511-2] W. R. Johnson, S. J. Hook, M. Foote, B. T. Eng, B. Jau, Jet Propulsion Lab. (United States)
8511 03	Inductively coupled plasma etching for delineation of InAs/GaSb pixels [8511-3] J. Nguyen, J. Gill, S. B. Rafol, A. Soibel, A. Khoshakhlagh, D. Ting, S. Keo, A. Fisher, E. Luong, J. Liu, J. Mumolo, S. D. Gunapala, Jet Propulsion Lab. (United States)
8511 04	Barrier infrared detector research at the Jet Propulsion Laboratory (Invited Paper) [8511-4] D. Z. Ting, S. A. Keo, J. K. Liu, J. M. Mumolo, A. Khoshakhlagh, A. Soibel, J. Nguyen, L. Höglund, S. B. Rafol, C. J. Hill, S. D. Gunapala, Jet Propulsion Lab. (United States)
8511 05	Multi-color QWIP FPAs for hyperspectral thermal emission instruments [8511-5] A. Soibel, E. Luong, J. M. Mumolo, J. Liu, S. B. Rafol, S. A. Keo, W. Johnson, D. Wilson, C. J. Hill, D. Z.-Y. Ting, S. D. Gunapala, Jet Propulsion Lab. (United States)
8511 07	Characterization of type II SLS n-CBIRD focal plane array [8511-7] S. B. Rafol, S. D. Gunapala, D. Z. Ting, A. Soibel, A. Khoshakhlagh, J. Nguyen, L. Höglund, J. K. Liu, J. M. Mumolo, S. A. Keo, E. M. Luong, Jet Propulsion Lab. (United States)
8511 08	Fundamental interface studies of GaSb and InAs substrates with atomic layer deposition [8511-8] F. Greer, L. Baker, S. Cook, A. Fisher, S. Keo, A. Soibel, A. Khoshakhlagh, J. Nguyen, D. Ting, S. Gunapala, Jet Propulsion Lab. (United States)

SESSION 2 INFRARED MISSIONS AND INSTRUMENTS

8511 09	Fourier transform spectrometer (FTS) servo characterization and improvement [8511-46] M. Davidson, J. Elwell, J. Swasey, Space Dynamics Lab. (United States)
8511 0A	LINC-NIRVANA for the LBT: setting up the world's largest NIR binoculars for astronomy (Invited Paper) [8511-9] R. Hofferbert, H. Baumeister, T. Bertram, J. Berwein, P. Bizenberger, A. Böhm, M. Böhm, J. Borelli, M. Brangier, F. Briegel, A. Conrad, F. De Bonis, R. Follert, T. Herbst, A. Huber, F. Kittmann, M. Kürster, W. Laun, U. Mall, D. Meschke, L. Mohr, V. Naranjo, A. Pavlov, J.-U. Pott, H.-W. Rix, R.-R. Rohloff, E. Schinnerer, C. Storz, J. Trowitzsch, Z. Yan, X. Zhang, Max-Planck-Institut für Astronomie (Germany); A. Eckart, M. Horrobin, S. Rost, C. Straubmeier, I. Wank, J. Zuther, Univ. zu Köln (Germany); U. Beckmann, C. Connot, M. Heininger, K.-H. Hofmann, T. Kröner, E. Nussbaum, D. Schertl, G. Weigelt, Max-Planck-Institut für Radioastronomie (Germany); M. Bergomi, A. Brunelli, M. Dima, L. Marafatto, J. Farinato, D. Magrin, R. Ragazzoni, V. Viotto, INAF - Osservatorio Astronomico di Padova (Italy);

C. Arcidiacono, G. Bregoli, P. Ciliegi, INAF - Osservatorio Astronomico di Bologna (Italy); G. Cosentino, Univ. degli Studi di Bologna (Italy); E. Diolaiti, I. Foppiani, M. Lombini, L. Schreiber, INAF - Osservatorio Astronomico di Bologna (Italy); F. D'Alessio, G. Li Causi, D. Lorenzetti, F. Vitali, INAF - Osservatorio Astronomico di Roma (Italy); M. Bertero, P. Boccacci, A. La Camera, Univ. degli Studi di Genova (Italy)

8511 0B **Stratospheric Observatory for Infrared Astronomy (SOFIA) (Invited Paper)** [8511-10]
E. E. Becklin, NASA Ames Research Ctr. (United States); R. D. Gehrz, Univ. of Minnesota (United States); T. L. Roellig, NASA Ames Research Ctr. (United States)

8511 0D **If EM waves don't interfere, what causes interferograms?** [8511-45]
S. J. Wellard, Space Dynamics Lab. (United States)

8511 0E **Airborne measurement of atmospheric methane concentration using pulsed lidar** [8511-13]
A. Ramanathan, NASA Goddard Space Flight Ctr. (United States) and Oak Ridge Associated Universities (United States); K. Numata, NASA Goddard Space Flight Ctr. (United States) and Univ. of Maryland, College Park (United States); S. T. Wu, S. X. Li, M. W. Dawsey, J. Mao, S. R. Kawa, H. Riris, NASA Goddard Space Flight Ctr. (United States)

SESSION 3 NOVEL INFRARED TECHNOLOGIES AND IN-FLIGHT CALIBRATION

8511 0F **Interband cascade lasers for sensing operating in continuous wave mode at room temperature (Invited Paper)** [8511-14]
S. Höfling, R. Weih, A. Bauer, M. Kamp, A. Forchel, Univ. Würzburg (Germany)

8511 0G **Characterization of GaAs/AlGaAs resonant tunneling diodes with a GaInNAs absorption layer as 1.3 μm photo sensors** [8511-15]
F. Hartmann, F. Langer, D. Bisping, Univ. Würzburg (Germany); A. Musterer, Univ. of British Columbia (Canada); S. Höfling, M. Kamp, A. Forchel, L. Worschech, Univ. Würzburg (Germany)

8511 0H **Sensitive detectors of terahertz radiation based on $\text{Pb}_{1-x}\text{Sn}_x\text{Te(In)}$** [8511-16]
D. Dolzhenko, M.V. Lomonosov Moscow State Univ. (Russian Federation); A. V. Nicorici, Institute of Applied Physics (Moldova); L. I. Ryabova, D. R. Khokhlov, M.V. Lomonosov Moscow State Univ. (Russian Federation)

8511 0I **In-flight blackbody calibration sources for the GLORIA interferometer** [8511-17]
F. Olschewski, Univ. Wuppertal (Germany); C. Rolf, Research Ctr. Juelich (Germany); P. Steffens, Univ. Wuppertal (Germany); A. Kleinert, C. Piesch, A. Ebersoldt, Karlsruhe Institute of Technology (Germany); C. Monte, B. Gutschwager, J. Hollandt, Physikalisch-Technische Bundesanstalt (Germany); P. Preusse, Research Ctr. Juelich (Germany); F. Friedl-Vallon, Karlsruhe Institute of Technology (Germany); R. Koppmann, Univ. Wuppertal (Germany)

SESSION 4 INSTRUMENTS FOR INFRARED ATMOSPHERIC PROBING

- 8511 OK **Final correction algorithms for HIRDLS version 7 data (Invited Paper)** [8511-19]
J. Gille, Univ. of Colorado at Boulder (United States) and National Ctr. for Atmospheric Research (United States); C. Cavanaugh, C. Halvorson, C. Hartsough, B. Nardi, M. Rivas, R. Khosravi, L. Smith, G. L. Francis, National Ctr. for Atmospheric Research (United States)
- 8511 OL **The engineering model for the multi spectral imager of the EarthCARE spacecraft** [8511-20]
A. Pérez-Albiñana, R. Gelsthorpe, A. Lefebvre, European Space Agency (Netherlands); M. Sauer, K. Kruse, R. Münzenmayer, EADS Astrium GmbH (Germany); G. Baister, M. Chang, J. Everett, A. Barnes, N. Bates, M. Price, M. Skipper, Surrey Satellite Technology Ltd. (United Kingdom); B. T. de Goeij, E. A. Meijer, F. van der Knaap, A. Van't Hof, TNO (Netherlands)
- 8511 OM **Lessons from three-years operation of TANSO-FTS on GOSAT** [8511-21]
H. Suto, A. Kuze, K. Shiomi, M. Nakajima, Japan Aerospace Exploration Agency (Japan)
- 8511 ON **Absolute radiance re-calibration of FIRST** [8511-22]
H. Latvakoski, Space Dynamics Lab. (United States); M. Mlynchak, D. Johnson, R. Cageao, NASA Langley Research Ctr. (United States); J. Swasey, K. Johnson, Space Dynamics Lab. (United States)
- 8511 OP **The evolution of the performance of the AVHRR, HIRS and AMSU-A instruments on board MetOp-A after over five years in orbit** [8511-24]
D. Battles, HE Space Operations, Inc. (United States); R. Lambeck, MEI Technologies, Inc. (United States); A. Pérez-Albiñana, European Space Agency (Netherlands); X. Wu, C. Cao, NOAA-NESDIS (United States); H. Bauch, VEGA Space GmbH (Germany); F. Montagner, EUMETSAT (Germany)
- 8511 OQ **Recent advances in improvement of forecast skill and understanding climate processes using AIRS Version-5 products (Invited Paper)** [8511-25]
J. Susskind, NASA Goddard Space Flight Ctr. (United States); G. Molnar, Morgan State Univ./NASA Goddard Space Flight Ctr. (United States); L. Iredell, R. Rosenberg, SAIC, NASA Goddard Space Flight Ctr. (United States)

SESSION 6 RADIOMETRY AND THERMOGRAPHY II

- 8511 OT **Micro-scale thermal imaging of advanced organic and polymeric materials (Invited Paper)** [8511-28]
J. Morikawa, Tokyo Institute of Technology (Japan)
- 8511 OU **Generation of a GIS-based environment for infrared thermography analysis of buildings** [8511-29]
M. Previtali, S. Erba, E. Rosina, Politecnico di Milano (Italy); V. Redaelli, Univ. degli studi di Milano (Italy); M. Scaioni, Tongji Univ. (China); L. Barazzetti, Politecnico di Milano (Italy)
- 8511 OV **Simultaneous measurement of temperature and emissivity with stereo dual band IR camera configuration** [8511-30]
A. Ianaro, G. Cardone, Univ. di Napoli Federico II (Italy)

SESSION 7 TOWARD LARGER AND MORE ROBUST INFRARED ARRAYS AT RAYTHEON

- 8511 0Y **Lifetime evaluation of CMOS mixed signal devices** [8511-33]
A. Linder, J. Furlong, N. Malone, D. Madajian, Raytheon Co. (United States); A. Kar-Roy, TowerJazz (United States)
- 8511 11 **Advancements in large-format SiPIN hybrid focal plane technology** [8511-37]
B. W. Kean, S. Kilcoyne, N. R. Malone, G. Wilberger, R. Troup, S. Miller, K. C. Brown, J. Vampola, Raytheon Vision Systems (United States)

POSTER SESSION

- 8511 13 **Metrological advantages of the light source based on optically connected integrating spheres** [8511-39]
L. Mikheenko, V. Borovytsky, National Technical Univ. of Ukraine "KPI" (Ukraine)
- 8511 14 **Improvement of the signal-to-noise ratio in the acquisition of photoplethysmographic images** [8511-40]
L. F. Corral Martinez, G. Paez, M. Strojnik, Ctr. de Investigaciones en Óptica, A.C. (Mexico)
- 8511 15 **Methods for edge enhancement in color images based on derivative operations** [8511-42]
J. L. Flores, Univ. of Guadalajara (Mexico); J. A. Ferrari, A. Fernández, J. R. Alonso, G. A. Ayubi, J. Di Martino, Instituto de Física (Uruguay)
- 8511 16 **Vectorial shearing interferometer used in defocus detection** [8511-43]
G. García-Torales, J. Sánchez Preciado, J. L. Flores, Univ. de Guadalajara (Mexico)

Conference Committee

Program Track Chair

Allen H.-L. Huang, University of Wisconsin-Madison (United States)

Conference Chairs

Marija Strojnik, Centro de Investigaciones en Óptica, A.C. (Mexico)

Gonzalo Paez, Centro de Investigaciones en Óptica, A.C. (Mexico)

Conference Program Committee

John Antoniadis, BAE Systems (United States)

Gabriele E. Arnold, Deutsches Zentrum für Luft- und Raumfahrt e.V.
(Germany)

Gail J. Brown, Air Force Research Laboratory (United States)

Catherine J. Cesarsky, European Southern Observatory (Germany)

Jam Farhoomand, TechnoScience Corporation (United States)

Gerald T. Fraser, National Institute of Standards and Technology
(United States)

John C. Gille, National Center for Atmospheric Research (United
States)

Sarath D. Gunapala, Jet Propulsion Laboratory (United States)

Dietrich Lemke, Max-Planck-Institut für Astronomie (Germany)

Neil R. Malone, Raytheon Company (United States)

Stanley J. Wellard, Space Dynamics Laboratory (United States)

Jan L. Williams, e-Systems Management Consultants (United States)

Jürgen Wolf, NASA Ames Research Center (United States)

Session Chairs

Welcome and Opening Remarks

Marija Strojnik, Centro de Investigaciones en Óptica, A.C. (Mexico)

Gonzalo Paez, Centro de Investigaciones en Óptica, A.C. (Mexico)

1 Infrared Activities at the Jet Propulsion Laboratory

Sarath D. Gunapala, Jet Propulsion Laboratory (United States)

2 Infrared Missions and Instruments

Marija Strojnik, Centro de Investigaciones en Óptica, A.C. (Mexico)

Stanley J. Wellard, Space Dynamics Laboratory (United States)

- 3 Novel Infrared Technologies and In-Flight Calibration
Gonzalo Paez, Centro de Investigaciones en Óptica, A.C. (Mexico)
Sergey N. Mekhontsev, National Institute of Standards and Technology (United States)
 - 4 Instruments for Infrared Atmospheric Probing
Gabriele E. Arnold, Deutsches Zentrum für Luft- und Raumfahrt e.V. (Germany)
Marija Strojnik, Centro de Investigaciones en Óptica, A.C. (Mexico)
 - 5 Radiometry and Thermography I
John C. Gille, University of Colorado at Boulder (United States)
Gonzalo Paez, Centro de Investigaciones en Óptica, A.C. (Mexico)
 - 6 Radiometry and Thermography II
John C. Gille, University of Colorado at Boulder (United States)
Gonzalo Páez, Centro de Investigaciones en Óptica, A.C. (Mexico)
 - 7 Toward Larger and More Robust Infrared Arrays at Raytheon
Neil R. Malone, Raytheon Company (United States)
Decosta Lindsay, Raytheon Company (United States)
- Concluding Remarks
Marija Strojnik, Centro de Investigaciones en Óptica, A.C. (Mexico)
Gonzalo Paez, Centro de Investigaciones en Óptica, A.C. (Mexico)

Introduction

Once again, the conference Infrared Remote Sensing and Instrumentation XX was held in San Diego, California, August 13 to 14, 2012, forming a part of the annual meeting of SPIE, a technical society dedicated to the advancement of science and engineering through the use of light. This was an especially important meeting for the loyal participants at this venerable meeting: we completed the twentieth in the series of these conferences making this the second oldest conference at the annual meeting. The next meeting will be held again in San Diego during the second week of August 2013.

On behalf of the authors, participants, readers of the proceedings, and especially on our own behalf, we wish to express our profoundest appreciation to the chairs of the smoothly run sessions. Dr. Sarath Gunapala organized the very first session, dealing with the significant advances that the NASA Jet Propulsion Laboratory is accomplishing on near, far, and multispectral IR detectors in support of space and defense applications.

The second session was our traditional "Infrared missions and instruments" where we learned the status of the established instruments and new concepts being proposed for future space, Earth, astronomical, and atmospheric exploration. Our third session was the key to any successful infrared mission, titled "Infrared technology and in-flight calibration." New missions arise with the birth of new key technologies. Without calibration we cannot trust the data that we receive in remote sensing.

When people used to ask me (MS) what the IR instruments actually do (i.e., what is the subject matter of this conference), I used to stumble. How do you tell in three words about the detection of an invisible planet orbiting a far-away star with infrared technology in a sentence or two? What about explaining to them that we deal with such everyday issues as monitoring the health status of Earth? What they like to hear is that we can predict the weather trends. This is the answer that they appreciate, because so much depends on weather especially in the last few years. The central session of the conference, titled "Instruments for infrared atmospheric probing," included presentations on this fascinating subject area. Every year we also try to have a session on either forest fire detection, propagation and monitoring from mobile platforms, or at least a few key presentations. It appears that with the changing weather patterns, the Earth surface is suffering more deforestation with the fire eruptions on all continents.

The next two sessions, sessions five and six, included the traditional science of radiometry and thermography. They were managed effectively and charmingly

by a team of Dr. John Gille from the University of Colorado, and Dr. Gonzalo Paez from the Optical Research Center in Mexico. They brought the art of collaboration to the level of courtesy that would impress even *Miss Emily Post*!

The seventh session was dedicated to the focal plane development at Raytheon, generating large number of very interesting questions with the promising title, "Toward the larger and more robust infrared arrays at Raytheon." Both the session organization and the challenge of dealing with some very difficult questions befell Mr. Neil R. Malone of Raytheon Company. We were treated to the description of new pixel-addressing technology allowing simultaneous detection of very intense and very weak sources without any bleeding or spillover to the neighboring pixels. The technology for the detection of a planet next to a bright star is closer every day!

Nearly fifty papers were presented in this conference, with truly an international scientific participation. A couple of papers were cancelled with advanced warning so alternate plans were put in action. Majority of presenters found the requisite time to write up their research accomplishments in a technical paper and submitted their work for inclusion in the proceedings for future reference. Their work may be downloaded from the SPIE Digital Library. Recently, their accessibility has been appreciably facilitated for the authors who pay the publication charges in the SPIE Journals.

Within the last few years, in the call-for-papers of the SPIE conferences, there has been inserted a little advisory that all papers are nowadays reviewed by the chairs and members of the technical committee. Many SPIE participants used to make an assumption that this is just *pro-forma*, so that our conferences would "look good." The truth is that each paper has been read carefully by at least one chair, for as long as we have been involved in these activities. And yes, the papers look good! Conference organization, just like being a journal editor, attracts a person who is interested in many subjects, not to say everything, and who reads anything that has words written or printed on it. Both of your chairs devour reading material. SPIE has recently put in practice an excellent review system where the input of the committee members can be taken in account when sending suggestions back to the authors. The papers at our conference have historically been of the highest levels, so the suggestions have to do mostly with formatting: maybe the European author forgot that the European paper size is different from that in the United States, or the format changed automatically because *computers know everything better*. We believe that one more look by an impartial reader at the final quality work that has been submitted by the author makes the paper more attractive, and the conference proceedings book becomes more informative and authoritative.

We pretty much had two questions per presentation. The dexterous moderators succeeded most of the time to suggest that further discussion be taken at the

break time. Sometimes we were caught in the exchange among the members of the audience that sounded most exciting, but as they say in the show business, "the show must go on." The good news is that the authors succeeded in making their presentation relevant to the audience, and the audience was interested in learning as much as they could. A truly win-win situation! We wish to express our appreciation to the participants, both the authors and the active audience who made the discussion so lively.

Special thanks are expressed to the SPIE staff for providing friendly guidance and organizational support to meet all the deadlines. Organizing a technical conference and publishing Proceedings involves hard work of a team of dedicated and knowledgeable people whose discrete advice to the chairs and guidance makes a conference a success. It is important to keep in mind that the SPIE staff handled and coordinated several thousand talks, and still, the whole event went smoothly as clockwork. We thank them for their efficient assistance.

**Marija Strojnik
Gonzalo Paez**
