The CCC fee code is 0277-786X/13/\$18.00.

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID Number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID Number.

Contents

v	Conference Committee
vii	Introduction

OPENING KEYNOTE SESSION

8729 02	Scanning electron microscopy/energy dispersive spectrometry fixed-beam or overscan x-ray microanalysis of particles can miss the real structure: x-ray spectrum image mapping reveals the true nature (Keynote Paper) [8729-1] D. E. Newbury, N. W. M. Ritchie, National Institute of Standards and Technology (United States)
8729 03	Does your SEM really tell the truth? Part 2 (Keynote Paper) [8729-2] M. T. Postek, A. E. Vladár, K. P. Purushotham, National Institute of Standards and Technology (United States)
8729 04	Electron microscopy and forensic practice (Invited Paper) [8729-3] M. Kotrlý, I. Turková, Institute of Criminalistics Prague (Czech Republic)

ADVANCEMENTS IN SCANNING PROBE MICROSCOPY

8729 05	A large range metrological atomic force microscope and its uncertainty analysis [8729-4] S. Gao, Q. Li, W. Li, M. Lu, Y. Shi, National Institute of Metrology (China)
8729 06	Performance improvement of a large range metrological AFM through parasitic interference feedback artifacts removing by using laser multimode modulation method [8729-5] Q. Li, S. Gao, W. Li, M. Lu, Y. Shi, National Institute of Metrology (China)

STEM WORKSHOP

8729 0B	HTA educational outreach program and change the equation participation [8729-10] R. Gordon, Hitachi High Technologies America, Inc. (United States)
8729 0C	Bringing students to the mountain: developing partnerships to introduce students to cutting-edge research [8729-11] A. L. Gillian-Daniel, Univ. of Wisconsin-Madison (United States); R. J. Gordon, Hitachi High Technologies America, Inc. (United States); B. L. Taylor, J. J. McCarthy, Univ. of Wisconsin-Madison (United States)
8729 0D	Using the Hitachi TM 3000 in a middle school classroom [8729-12] M. E. Wolfinger, Tacoma Park Middle School (United States)

- 8729 OE **Implementing STEM technology in a Title One middle school classroom** [8729-13]
C. Holcomb, Western Heights Middle School (United States)
- 8729 OF **Integrating independent research into science curricula to foster STEM leadership** [8729-14]
C. Queenan, A. Calabro, D. Becker, Bergen County Academies (United States)

ADVANCEMENTS IN SCANNING MICROSCOPIES

- 8729 OH **Advances in photo-thermal infrared imaging microspectroscopy** [8729-16]
R. Furstenberg, C. Kendziora, M. Papantonakis, V. Nguyen, A. McGill, U.S. Naval Research Lab. (United States)
- 8729 OI **Surface optical properties for copper based on surface Kramers-Kronig analysis** [8729-17]
T. Tang, Z. M. Zhang, Univ. of Science and Technology of China (China); K. Tórkési, Institute of Nuclear Research (Hungary); K. Goto, Nagoya Institute of Technology (Japan); Z. J. Ding, Univ. of Science and Technology of China (China)

PARTICLE BEAM INTERACTION MODELING WORKSHOP

- 8729 OJ **Monte Carlo simulation of realistic beam-sample interaction in SEM: application to evaluation of sharpness measurement methods** [8729-18]
Z. Ruan, S. F. Mao, P. Zhang, H. M. Li, Z. J. Ding, Univ. of Science and Technology of China (China)
- 8729 OK **Monte Carlo study of the influence of electron beam focusing to SEM linewidth measurement** [8729-19]
P. Zhang, S. F. Mao, Z. M. Zhang, Z. J. Ding, Univ. of Science and Technology of China (China)
- 8729 OL **Monte Carlo simulation of x-ray photoemission electron microscopic image** [8729-20]
Z. M. Zhang, T. Tang, S. F. Mao, Z. J. Ding, Univ. of Science and Technology of China (China)

Conference Committee

Symposium Chair

Kenneth R. Israel, Major General (USAF Retired) (United States)

Symposium Cochair

David A. Whelan, Boeing Defense, Space, and Security (United States)

Conference Chairs

Michael T. Postek, National Institute of Standards and Technology
(United States)

Dale E. Newbury, National Institute of Standards and Technology
(United States)

S. Frank Platek, U.S. Food and Drug Administration (United States)

Tim K. Maugel, University of Maryland, College Park (United States)

Conference Program Committee

Eva M. Campo, University of Pennsylvania (United States)

Ronald G. Dixon, National Institute of Standards and Technology
(United States)

Lucille A. Giannuzzi, L.A. Giannuzzi & Associates LLC (United States)

Robert Gordon, Hitachi High Technologies America, Inc.
(United States)

Michael J. McVicar, Centre of Forensic Sciences (Canada)

John P. Petralli M.D., U.S. Army Medical Research Institute of Chemical
Defense (United States)

Mary Satterfield, National Institute of Standards and Technology
(United States)

Vladimir A. Ukraintsev, Nanometrology International, Inc.
(United States)

John S. Villarrubia, National Institute of Standards and Technology
(United States)

András E. Vladár, National Institute of Standards and Technology
(United States)

Session Chairs

Scanning Probe-Based Nanopatterning and Dip-Pen
Nanolithography: Joint Session with Conferences 8725 and 8729

Ronald G. Dixon, National Institute of Standards and Technology
(United States)

Debjyoti Banerjee, Texas A&M University (United States)

Opening Keynote Session

S. Frank Platek, U.S. Food and Drug Administration (United States)

Tim K. Maugel, University of Maryland, College Park (United States)

Advancements in Scanning Probe Microscopy

Ronald G. Dixon, National Institute of Standards and Technology
(United States)

AFM Discussion Session

Ronald G. Dixon, National Institute of Standards and Technology
(United States)

Vladimir A. Ukraintsev, Nanometrology International, Inc.
(United States)

Introduction: STEM Workshop

Mary Satterfield, National Institute of Standards and Technology
(United States)

(United States)

András E. Vladár, National Institute of Standards and Technology
(United States)

Introduction

The Scanning Microscopies 2013: Advanced Microscopy Technologies for Defense, Homeland Security, Forensic, Life, Environmental, and Industrial Sciences (Conference 8729) brought microscopists from all aspects of scanning microscopies (from scanned optics and probes to scanned particle beams) together in a single forum to discuss current research and new advancements in the field.

The Scanning Microscopies Conferences have been typically instrument and technique intensive, as opposed to other DSS Conferences which are generally more applied. With that in mind, a joint session with Conference 8725 Micro- and Nanotechnology Sensors, Systems, and Applications V was continued this year entitled Scanning Probe-Based Nanopatterning and Dip-Pen Nanolithography was held in order to "cross-pollinate" between the two Conferences. In addition, a number of general tutorial-like invited presentations such as: "Scanning electron microscopy/energy dispersive spectrometry fixed-beam or overscan x-ray microanalysis of particles can miss the real structure: x-ray spectrum image mapping reveals the true nature" (8729-1) and "Does your SEM really tell the truth? Part 2" (8729-2) discussed some of the basics of measurement and energy dispersive x-ray microanalysis in the scanning microscope. This year, Scanning Microscopies 2013 awarded Dr. Michael T. Postek the 2013 Professor Sir Charles Oatley Memorial Award: "In recognition of his many years of dedication to and work in the field of scanning electron microscopy including research, instruction, publications, and metrology, industrial and nanomanufacturing applications."

The Scanning 2013 conference was quite successful. Sessions encompassed papers covering forensics applications, scanning electron microscopy, helium ion microscopy, scanned probe microscopy, scanned optical microscopy and particle beam microscopy. The workshop introduced at DSS 2012 "Microscopy for STEM Educators" continued in 2013. The session consisted of presentations on the successful implementation of microscopy in the classroom. In a follow-on session, teachers were able to use a Hitachi table-top scanning electron microscope and an Agilent atomic force microscope to examine material they had brought with them.

The microscopy for STEM Educators workshop provided the opportunity for an introduction to analytical techniques traditionally only available in the research laboratory and to see unprecedented images of everyday materials, and expand teachers' understanding of what is possible in the laboratory and classroom. The workshop was broken into a series of presentations and a laboratory session. The presentations discussed the Hitachi High Technologies (HTA) educational outreach program and their participation in Change the Equation. HTA provides table-top scanning electron microscopes to grade

schools and high schools all across the United States. As a global company they also provide instruments to similar programs across the world. A second presentation entitled "Bringing students to the mountain: developing partnerships to introduce students to cutting-edge research," by Anne Lynn Gillian-Daniel, of the University of Wisconsin-Madison discussed how they were able to develop a program with the manufacturers to interest students in nanotechnology research. The fourth presentation discussed the use of a scanning electron microscope and its impact on students within the Montgomery County School System, and Carolyn Holcomb reported on the impact of high tech instrumentation on disadvantaged students in a high school in western Maryland. The final presentation was a stirring example of how a successful high technology program can be developed and supported within a high school environment which can also be utilized for research in collaboration with local industries.

Following the microscopy for STEM Educators workshop, teachers had the opportunity to visit the Exhibit Hall where nearly 500 suppliers of optics, lasers, image processing, spectroscopy, infrared systems, and optoelectronic components were present. Teachers were encouraged to ask questions and take advantage of the handouts.
