Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID Number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID Number.

Introduction

As conference chairs we look forward to read the abstracts submitted and the final papers brought forward each year.

This year was no different; the diversity of papers demonstrates the critical role of laser beam shaping techniques. The papers provide glimpses into what could be the next leap in laser beam shaping; through further understanding and refinement of theory or how applications have been adopted into real life industrial laser tools.

The chairs are grateful to everyone who participated in this year's conference and thank you for sharing your work.

We look forward to celebrating a milestone in the conferences history at Laser Beam Shaping XV in 2014.
