Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID Number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID Number.

Introduction

On behalf of the Engineering Reality of Virtual Reality (ERVR) program committee, welcome to the proceedings of the conference held 3-4 February 2014 in San Francisco, California, United States. ERVR is held annually as a part of IS&T/SPIE Electronic Imaging. It is the premier international imaging symposium and is at the forefront of research and innovation in digital imaging systems, 3D display, image quality, optimization, and more.

This year's conference included a panel moderated by Jaqueline Ford Morie with the panelists Brenda Laurel of UC Santa Cruz and Margaret Dolinsky Indiana University. The discussion and audience input examined the current state of virtual reality, augmented reality, online realities, and alternate realities along with related devices that are making development more accessible.
