Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID Number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID Number.

9193 07	Windows into non-Euclidean spaces [9193-4]

COMPUTATIONAL METHODS: ALGORITHMS AND ANALYSIS

9193 0A	Formal analysis of electromagnetic optics [9193-7]
9193 0B	Digital image processing for wide-angle highly spatially-variant imagers [9193-8]
9193 0C	Research on the feature extraction and pattern recognition of the distributed optical fiber sensing signal [9193-9]
9193 0D	The analysis and design of multiple phase plane for wavefront coding system [9193-41]

COMPUTATIONAL METHODS: SIMULATION

9193 0E	Stereo matching image processing by synthesized color and the characteristic area by the synthesized color [9193-10]
9193 0F	A combined simulation approach using ray-tracing and finite-difference time-domain for optical systems containing refractive and diffractive optical elements [9193-11]
9193 0G	Open-source fiber laser and amplifier design toolbox using custom FDTD simulation engine [9193-12]

- 9193 OH **LED source modeling and rayset generation from luminance maps (Invited Paper)** [9193-13]
- 9193 OI **Structural-Thermal-Optical-Performance (STOP) model development and analysis of a field-widened Michelson interferometer** [9193-14]
- 9193 OJ **The refractive lens heat absorption from light source caused thermal aberration analysis** [9193-15]

ADAPTIVE OPTICS

- 9193 OK **Focus tunable mirrors made by ionic polymer-metal composite** [9193-16]
- 9193 OL **Stability of the micromachined membrane deformable mirror as a freeform optical element** [9193-17]
- 9193 OM **Compact touchless fingerprint reader based on digital variable-focus liquid lens** [9193-18]
- 9193 ON **Reliability of ionic polymer metallic composite for opto-mechanical applications** [9193-19]
- 9193 OO **An adaptive achromatic doublet design by double variable focus lenses** [9193-20]

OPTICS AND SOUND

- 9193 OP **Chords and harmonies in mixed optical and acoustical stimuli (Invited Paper)** [9193-21]

INSTRUMENTATION

- 9193 OQ **Near-field imaging techniques for surface inspection** [9193-22]
- 9193 OR **Improved methods for adjusting the UV content of measurement instrument illumination for papermaking industry** [9193-23]
- 9193 OT **Zepto-mole detection in microfluidics by novel nonlinear multi-photon laser wave-mixing spectroscopy for biomedical and environmental applications** [9193-25]

CAMERAS AND CAMERA/PROJECTOR SYSTEMS

- 9193 OU **Design and characterization of a copolymer radial gradient index zoom lens** [9193-26]
- 9193 OV **Plenoptic camera image simulation for reconstruction algorithm verification** [9193-27]
- 9193 OW **Ultra-slim wafer-level camera with 720p resolution using micro-optics** [9193-28]
- 9193 OX **A hyperchromatic lens for recording time-resolved phenomena** [9193-29]
- 9193 OY **Freeform mirror for illumination system of color-sequential LCOS pico projector** [9193-30]

- 9193 0Z **Image exposure suppressed optical system by spatial light modulator [9193-31]**

LASER SYSTEMS

- 9193 10 **Unidirectional emission from whispering gallery modes via transformation optics [9193-32]**
- 9193 11 **Reduced group delay dispersion in quantum dot passively mode-locked lasers operating at elevated temperature [9193-33]**
- 9193 12 **Reaction bonded silicon carbide material characteristics as related to its use in high power laser systems [9193-34]**
- 9193 13 **The new design of final optics assembly on SG-III prototype facility [9193-35]**

OPTICAL NETWORKS

- 9193 15 **Impact of green technologies in optical networks case study: green wireless optical broadband access network [9193-37]**
- 9193 16 **Design of visible light communication system for maintaining uniform data rate [9193-38]**

POSTER SESSION

- 9193 18 **WDM-PON network simulation with different implementation of optical amplifier in the line [9193-40]**
- 9193 1A **High-speed phosphor-LED wireless communication system utilizing no blue filter [9193-44]**
- 9193 1C **Modeling large deflection of circular membranes for applications in active optical elements [9193-46]**
- 9193 1E **Transformation optics with windows [9193-48]**
- 9193 1G **A pair of diopter-adjustable eyeglasses for presbyopia correction [9193-50]**
- 9193 1H **Development of wideband spectral dispersers for exoplanetary science: comparative study of material, design, and fabrication [9193-51]**
- 9193 1I **Quality improvement of transmission images for transparent displays with micro-lens array [9193-52]**
- 9193 1J **Simulation of Integrated Optical Network (IPON) properties [9193-53]**
- 9193 1K **Lorentz-transformation and Galileo-transformation windows [9193-54]**
- 9193 1M **Speckle reduction in projection display by controlling the spatial coherence of laser source [9193-56]**

Authors

Numbers in the index correspond to the last two digits of the six-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Arthur J. Davis, Reflexite Energy Solutions (United States)
- 9 Optical Networks
Joseph R. Mulley, Melles Griot (United States)

Introduction

This year in San Diego, California, we held the seventeenth conference of Novel Optical Systems Design and Optimization. The conference was very well attended and featured oral presentation topic tracks in: Phase Space and Telecentric Optics, Computational Methods: Algorithms and Analysis, Computational Methods: Simulation, Adaptive Optics, Optics and Sound, Instrumentation, Cameras and Camera/Projector Systems, Laser Systems, and Optical Networks. In addition, there was a poster session, a joint Optical Engineering Plenary Session, and Technical Group Events.

The conference started with a session of Phase Space Optics delving into an alternative way to think about rays and wavefronts. Two sessions were devoted to Computational Methods describing new techniques to design and use optical systems. The session on Adaptive Optics looked at ways to reform optical surfaces in dynamic applications. A session of optical Instrumentation covered optical systems for inspection and imaging. Camera and Projector Systems were described in a separate session with designs for zoom lenses, micro optics, and time resolved recording. The session Laser Systems provided talks on laser design, amplification and manufacturing. The final session on Optical Networks discussed methods of efficiently connecting users to data networks.

Three invited papers were presented during the conference;

- Mohamad Asghari of the Univ. of California showed how a technique called the Anamorphic Stretch Transform can help alleviate data growth due to storing images in big data.
- Peter Goldstein of Philips Color Kinetics presented his work LED source modeling and the sampling of Luminance images to generate ray data.
- Cornelius Hahlweg from bbw Hochschule discussed the effects of sound and light stimuli on human behavior. This talk concluded our focus on optics and music.

The Novel Optical Systems Design and Optimization committee continued to explore some new technology niches this year and this seems to have been a successful and positive endeavor. We look forward to continuing this effort next year!

Our thanks go to those who helped make this conference a success, especially the authors, audience, SPIE staff, and program committee. The authors share the credit for making this conference an unqualified success. The audience built upon this success by being active and asking engaging questions. The SPIE staff ensured that everything ran smoothly before, during, and after the meeting. The program committee provided excellent assistance to ensure the quality of the content while also presiding over a number of the sessions. It was composed of Jost Adam,

W. Andrew Cheng, Jyh-Long Chern, Peter I. Goldstein, Cornelius F. Hahlweg, Richard C. Juergens, R. John Koschel, Scott A. Lerner, Paul K. Manhart, Joseph R. Mulley, Jorge Ojeda-Castaneda, Craig Olson, Kevin P. Rolland-Thompson, José Sasián, David L. Shealy, and Haiyin Sun.

Next year we will return for the eighteenth iteration of this conference. The chairs will be G. Groot Gregory and Arthur J. Davis. The planning for Novel Optical Systems Design and Optimization XVIII in 2015 is already underway, so please start planning submissions, questions, and attendance. Focus themes are being decided at this time. If you would like to assist with the 2015 or later conference please contact one of us. We look forward to seeing you in 2015!

G. Groot Gregory
Arthur J. Davis
