Proceedings of SPIE 0277-786X, V. 9202

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Photonics Applications for Aviation, Aerospace, Commercial, and Harsh Environments V,
edited by Alex A. Kazemi, et. al., Proc. of SPIE Vol. 9202, 920201 · © 2014 SPIE
CCC code: 0277-786X/14/\$18 · doi: 10.1117/12.2084702

Proc. of SPIE Vol. 9202 920201-1

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Publication of record for individual papers is online in the SPIE Digital Library.

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID Number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID Number.

Contents

vii	<i>Authors</i>
ix	<i>Conference Committee</i>
xiii	<i>Introduction</i>

SESSION 1	FIBER OPTIC SENSOR SYSTEMS
9202 02	Fiber optic liquid level sensor system for aerospace applications (Invited Paper) [9202-1]
9202 03	Eye readable metal hydride based hydrogen tape sensor for health applications [9202-2]
9202 05	Fiber optic force sensor: application to automotive industry [9202-69]
9202 06	Hydrogen leak detection: a comparison between fiber optic sensors based on different designs (Invited Paper) [9202-4]
9202 07	Integrated optical hydrogen and temperature sensor on silicon-on-insulator platform [9202-5]
SESSION 2	OPTICAL SENSORS AND INTERCONNECTS FOR HARSH ENVIRONMENTS
9202 08	Development of internal components for M38999 type connectors, for use in advanced photonic applications and with specialty optical fibers [9202-7]
9202 09	Application suitability and reliability of harsh environment fiber optic interconnects [9202-8]
9202 0A	Use of the characteristic Raman lines of toluene (C₇ H₈) as a precise frequency reference on the spectral analysis of gasoline-ethanol blends [9202-9]
9202 0B	Novel optical encoder for harsh environments [9202-10]
9202 0C	Improvement of the signal integrity in diffractive optical encoders [9202-71]
SESSION 3	WEARABLE DISPLAYS
9202 0D	The segmentation of the HMD market: optics for smart glasses, smart eyewear, AR and VR headsets (Invited Paper) [9202-11]
9202 0E	Monolithic light guide optics enabling new user experience for see-through AR glasses [9202-12]
9202 0F	Parity-time symmetry diffractives implementing unidirectional diffraction—application to optical combiners [9202-14]

SESSION 4	OPTICS AND PHOTONICS IN AVIATION AND COMMERCIAL INDUSTRIES
9202 0H	Optical and piezoelectric properties of p-type ZnO nanowires on transparent flexible substrate for energy harvesting [9202-16]
9202 0I	Investigation on harsh environmental effects on polymer fiber optic link for aircraft systems [9202-17]
9202 0J	Analysis and comparison of experimental and simulated results for an omnidirectional free space optical receiver architecture [9202-18]
9202 0K	The health risks associated with energy efficient fluorescent, LEDs, and artificial lighting [9202-19]
SESSION 5	SENSORS AND MONITORING SYSTEMS
9202 0L	Light weight, high-speed, and self-powered wireless fiber optic sensor (WiFOS) structural health monitor system for avionics and aerospace environments (Invited Paper) [9202-20]
9202 0N	Distributed fiber optic sensor based on correlation coded Brillouin scattering for long range condition monitoring [9202-22]
9202 0O	High speed all-optical PRBS generation using binary phase shift keyed signal based on QD-SOA [9202-24]
9202 0P	Remote fluorescence lifetime inspection of hermeticity of packaged food containers [9202-25]
SESSION 6	SPECIALTY SENSORS/COMMUNICATION NETWORKING
9202 0Q	Utilizing self-seeding RSOA with Faraday rotator mirror for colorless access network [9202-26]
9202 0R	Demonstration of 2.5 Gbit/sec free space optical communication by using Y-00 cipher: toward secure aviation systems [9202-27]
9202 0S	All optical two-way time transfer in strongly heterogeneous networks [9202-28]
9202 0T	Fiber optic sensor for vibration detection [9202-29]
SESSION 7	MULTI-COMPONENTS MEASUREMENTS
9202 0U	An order of magnitude improvement in optical fiber bandwidth using spatial domain multiplexing/space division multiplexing (SDM) in conjunction with orbital angular momentum (OAM) (Invited Paper) [9202-30]
9202 0W	Universal liquid level sensor employing Fresnel coefficient based discrete fiber optic measurement technique [9202-68]

- 9202 0Z **Ranging light sensing guide with periodic structure** [9202-33]
- 9202 10 **Real-time atmospheric imaging and processing with hybrid adaptive optics and hardware accelerated lucky-region fusion (LRF) algorithm** [9202-34]

SESSION 8 WDM, HYBRID, AND SPACE ARCHITECTURES

- 9202 12 **LPFG sensing network for distributed shape control (Invited Paper)** [9202-35]
- 9202 13 **Analysis of an all optical de-multiplexer architecture utilizing bevel design for spatially multiplexed optical fiber communication systems** [9202-36]
- 9202 14 **Analysis of spatial domain multiplexing/space division multiplexing (SDM) based hybrid architectures operating in tandem with wavelength division multiplexing** [9202-37]
- 9202 15 **Rollable nano-etched diffractive low-concentration PV sheets for small satellites** [9202-38]
- 9202 16 **Harsh environment fiber optic connectors/testing** [9202-39]
- 9202 17 **Multi-spectral pyrometer for gas turbine blade temperature measurement** [9202-40]

SESSION 9 PHOTONICS SYSTEMS AND COMPONENTS

- 9202 18 **Concentric circles based simple optical landing aid for vertical takeoff and landing aircrafts** [9202-67]
- 9202 19 **Micro packaging of hermetic seal mini dual in line laser diode module for aerospace applications (Invited Paper)** [9202-41]
- 9202 1A **Making hexagonal electrodes on Nafion for deformable mirrors applications** [9202-43]
- 9202 1B **Mode splitting and resonant coupling between a slot metasurface and PMMA** [9202-44]
- 9202 1C **Supercontinuum generation in tapered rib waveguide** [9202-45]

SESSION 10 OPTICAL SYSTEMS, SOURCES, AND COMPONENTS FOR HARSH ENVIRONMENT

- 9202 1D **Rugged sensor window materials for harsh environments (Invited Paper)** [9202-47]
- 9202 1E **Circular polarized leaky wave surface** [9202-48]
- 9202 1F **Analysis of LPFG sensor systems for aircraft wing drag optimization** [9202-49]
- 9202 1G **Optimization of a low-concentration photovoltaic system** [9202-50]

SESSION 11 FIBER OPTIC SENSORS/WIRELESS SYSTEMS/SPECTRAL ANALYSIS

- 9202 1I **Optical waveguide modeling of conducting metal oxide enabled evanescent wave absorption spectroscopy sensors** [9202-53]
- 9202 1J **Pressure sensitivity analysis of fiber Bragg grating sensors** [9202-54]
- 9202 1K **Direct B-integral measurement, and SPM compensation in fiber optic CPA systems** [9202-55]

SESSION 12 BRAGG GRATING SENSORS/3D DISPLACEMENT

- 9202 1L **Single video camera method for using scene metrics to measure constrained 3D displacements** [9202-56]
- 9202 1M **Highly distributed multi-point, temperature and pressure compensated, fiber optic oxygen sensors (FOxSense) for aircraft fuel tank environment and safety monitoring** [9202-57]
- 9202 1O **Highly reproducible Bragg grating acousto-ultrasonic contact transducers** [9202-59]
- 9202 1P **Fiber optic connectors for harsh environment of aviation and aerospace applications** [9202-66]
- 9202 1Q **Generation of dynamic Brillouin grating in polarization maintaining fiber** [9202-61]

POSTER SESSION

- 9202 1R **Considerations for application of Laguerre-Gaussian beam wave in optical wireless communication** [9202-51]
- 9202 1U **Dimensional stability of materials based on Portland cement at the early stages** [9202-64]
- 9202 1V **Method for separating video camera motion from scene motion for constrained 3D displacement measurements** [9202-65]

Authors

Numbers in the index correspond to the last two digits of the six-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Introduction

Over the past half century, the field of fiber optics has undergone a quantum leap. We have seen tremendous technological progress in photonics for the aviation, aerospace and transportation industries in harsh environments. Information, intelligence, and data are transferred from one point to another more quickly and precisely than ever thought possible due to these recent advancements. It is envisioned that fiber optics shall become as ubiquitous as copper wire with superior reliability and robustness properties.

Optics and photonics greatly benefitted from the synergy with the telecommunications industry resulting in a number of new technologies including micro-packaging of optics components, aircraft photonics networks, micro and nano-sensors, see-through wearables, head-mounted displays, and phase-shifted fiber Bragg gratings for materials health monitoring.

We are fortunate to be among the pioneers of this exciting and rapidly changing field. The technological achievements are the result of solid engineering, dedication, and innovation. This book contains a series of papers which discuss leading edge technologies and state-of-the-art optics and fiber optic sensor technologies for photonics in aerospace and transportation industries including: advanced technologies for cryogenic liquid level detection of hydrogen for space applications to a new generation of smart fiber optic sensors, a novel implementation of wearable glass, micro satellite systems, micro and nano in optoelectronics and wireless sensor monitoring systems.

Today a significant proportion of the world's communications are carried by fiber optic cables. Fiber optic technology has revolutionized the telecommunication market and is rapidly becoming a major player in information technology and aviation industries.

This year we had the highest number of entries with a total of 56 papers which included numerous papers in the field of optoelectronics. As a result we are very grateful to all of the authors and behalf of the SPIE and myself would like to take this opportunity to thank the 56 papers presented by distinguished authors from around the world and for their valuable contributions, particularly by Dr. Bernard Kress of Google X (United States), Dr. Edgar Mendoza from Redondo Optics, Inc. (United States), Professor Syed Murshid from Florida Institute of Technology (United States), Professor Abraham Ishihara of Carnegie Mellon University (United States), Professor Nicolas Javahiraly of University of Strasbourg (France), Professor Bernard Dam of Technische University Delft (Netherlands), Professor Fumio Futami from Tamagawa University (Japan), Dr. M. Alam for University of Toronto (Canada), Dr. Dan Curticepean (Germany), Professor Chi-Wai Chow of National Chiao Tung University (Taiwan), Dr. B. Srinivasan from Indian Institute of Technology, Dr. Dipankar

Sengupta from Università degli Studi di Padova (Italy), Dr. K. Sarayeddlina of OPTIVENT. S.A. (France), Dr. Josef Vojtech from CESNET (Czech Republic), Dr. Shyam Bayya of U.S. Naval Research Lab. (United States), Dr. Nezhir Mrad from Defense Research and Development (Canada) , Dr. Michael Buric from National Energy Technology Lab. (United States), Dr. Shyam Bayya and Dr. Jony Jiang Liu from U.S. Army Research Lab. for outstanding papers they presented in this book.

I also would like to thank my management at The Boeing Co. and the SPIE personnel for their diligent and support in publication of this book.
