Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID Number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID Number.

Contents

vii	<i>Authors</i>
ix	<i>Conference Committee</i>
xi	<i>Introduction</i>

SESSION 1 FUNDAMENTALS AND FACILITY REPORTS I

9209 03	Partial coherence and imperfect optics at a synchrotron radiation source modeled by wavefront propagation (Invited Paper) [9209-2]
9209 04	Simulations applied to focusing optics at European XFEL (Invited Paper) [9209-3]
9209 05	Simulations of x-ray optics for ESRF-upgrade programme [9209-4]

SESSION 2 FUNDAMENTALS AND FACILITY REPORTS II

9209 07	Recent updates in the “Synchrotron Radiation Workshop” code, on-going developments, simulation activities, and plans for the future [9209-6]
---------	---

SESSION 3 METHODS AND CODES I

9209 08	Propagation of coherent light pulses with PHASE (Invited Paper) [9209-7]
9209 09	X-ray optics simulation and beamline design using a hybrid method: diffraction-limited focusing mirrors (Invited Paper) [9209-8]

SESSION 4 METHODS AND CODES II

9209 0A	Powerful scriptable ray tracing package xrt (Invited Paper) [9209-9]
9209 0B	Novel applications of the x-ray tracing software package McXtrace (Invited Paper) [9209-10]
9209 0C	MASH: a framework for the automation of x-ray optical simulations [9209-11]

SESSION 5 INSTRUMENTS AND BEAMLINES

9209 0E	X-ray optical systems: from metrology to Point Spread Function (Invited Paper) [9209-13]
9209 0F	Specification of x-ray mirrors in terms of system performance: a new twist to an old plot (Invited Paper) [9209-14]

- 9209 OG **Soft matter interfaces beamline at NSLS-II: geometrical ray-tracing vs. wavefront propagation simulations** [9209-15]
- 9209 OH **Partially coherent wavefront propagation simulations for inelastic x-ray scattering beamline including crystal optics** [9209-16]
- 9209 OI **Wavefront propagation simulations for a UV/soft x-ray beamline: Electron Spectro-Microscopy beamline at NSLS-II** [9209-17]
- 9209 OJ **Calculation of the instrumental profile function for a powder diffraction beamline used in nanocrystalline material research** [9209-18]

SESSION 6 CRYSTAL OPTICS

- 9209 OL **Perfect crystal propagator for physical optics simulations with Synchrotron Radiation Workshop** [9209-20]
- 9209 OM **Development of spatially resolved high resolution x-ray spectroscopy for fusion and light-source research** [9209-21]
- 9209 OO **Modeling of a compound imaging system with a curved monochromator and polycapillary optics** [9209-23]

SESSION 7 HIGH-RESOLUTION FOCUSING OPTICS AND IMAGING I

- 9209 OP **Computational techniques in propagation-based x-ray phase imaging (Invited Paper)** [9209-24]
- 9209 OQ **The finite-difference simulation of x-rays propagation through a system of lenses** [9209-26]
- 9209 OR **Contrast enhancement of propagation based x-ray phase contrast imaging** [9209-27]

SESSION 8 HIGH-RESOLUTION FOCUSING OPTICS AND IMAGING II

- 9209 OT **3D x-ray reconstruction using lightfield imaging** [9209-29]
- 9209 OU **Developments of x-ray grating imaging and trying of multiple information fusion** [9209-30]

POSTER SESSION

- 9209 OV **Separation of hard x-ray synchrotron radiation from electron beam slices** [9209-31]
- 9209 OX **A proposal for an open source graphical environment for simulating x-ray optics** [9209-33]
- 9209 OY **Simulation of the ultrahigh energy resolution IXS analyzer system at NSLS-II** [9209-34]

- 9209 0Z **An open software framework for advancement of x-ray optics simulation and modeling**
[9209-35]
- 9209 11 **A new SHADOW update: integrating diffraction effects into ray-tracing** [9209-37]
- 9209 13 **Fourier transform image processing techniques for grid-based phase contrast imaging**
[9209-39]

Authors

Numbers in the index correspond to the last two digits of the six-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Introduction

This SPIE 9209 Conference, Advances in Computational Methods for X-Ray Optics III, comes three years after the second edition (SPIE 8141). It is our intention to organize this conference with three-year frequency—leaving time to witness the important developments in the field. 10 of the 28 oral presentations were invited. An interesting poster session opened the conference sessions with five more papers. Sessions were dedicated to Fundamentals and Facility Reports, Methods and Codes, Instruments and Beamlines, Crystal Optics, and High-Resolution Focusing Optics and Imaging. A satellite workshop on “Software for Modeling X-ray Sources, Optics and Scattering” completed and complemented the program of the conference with live demonstrations of software tools.

The numerous presentations demonstrated considerable progress in the field since the last conference: stimulated, to large extent, by the construction and start of operation of the new synchrotron and XFEL sources and the challenging upgrade of the existing ones. This evolution and in particular the continuously growing importance of the wave-optics simulations for the low-emittance synchrotrons and for x-ray FEL, was emphasized by Kwang-Je Kim in his opening talk. Other speakers from most important X-ray sources (Diamond Light Source, European XFEL, ESRF, LCLS, NSLS-II, MAX-IV, APS, Elettra) discussed the news from their facilities with examples of simulations for beamlines. The presentations showed that most new beamline simulations were modeled using well established software codes (SRW, SHADOW, PHASE, McXtrace) and in many cases the calculations used more than one code which stressed the adequacy and limitations of the different codes depending on the phenomena and radiation characteristics to study. Calculations of partially coherent emission and radiation propagation are extensively demanded for the new facilities, and SRW demonstrated its suitability for these simulations and is taken as a reference. Several new developments in SRW extended its range of applications to cover grazing incidence focusing mirrors, variable line spacing gratings and crystals. Merging wave-optics and ray-tracing into hybrid methods is another tendency that has been observed, and it opens the way to new tools that will permit to simulate experiments using simultaneously several codes. New developments for treating and analyzing scattering from mirror imperfections were presented. A crystal optics session covered a number of new developments and applications including high-resolution crystal systems, coherent imaging of photonic crystals, applications for plasma diagnostics, and imaging optics in laboratory sources.

Although most of the talks were related to synchrotron radiation sources (of third and fourth generation), a few presentations were dedicated to other x-ray sources (plasma physics, astrophysics). The last session on High-Resolution Focusing Optics and Imaging included experimental and modeling works for phase contrast imaging using laboratory sources. The Conference triggered a

rich exchange of information among different communities that share optical designs and methodological approaches for dealing with x-rays.

The workshop on "Software for Modeling X-ray Sources, Optics and Scattering" followed the talks and was well attended. The workshop was limited to short demonstrations of software updates, in three blocks related to McXtrace, SHADOW and SRW. E. B. Knudsen discussed last applications of McXtrace and showed a web-based interface. P. Sondauss demonstrated MASH, a web-based environment to simulate beamlines powered by COMSOL and SHADOW. M. Sanchez del Rio briefly discussed the evolution of XOP, upgrading the current version to 2.4, and exploring a new version to be integrated into an Orange-based common tool. L. Rebuffi showed a modern and performant interface to SHADOW under Orange. In the last block dedicated to SRW, O. Chubar briefly presented the latest news, including the on-going development of the "virtual beamline" library targeting to facilitate commissioning of new beamlines and simulation of experiments, then D. Bruhwiler demonstrated the use of a web-IPython-based interface for SRW, and finally L. Samoylova presented the IPython environment built on top of SRW for the simulations at the European XFEL.

We are indebted to our co-chairs Carolyn MacDonald and Kawal Sawhney for their enthusiasm and help in the organization of this conference, and also to the members of the Program Committee for their invaluable assistance.
