xiii Conference Committee
xvii Introduction

SIMULATION, OPC, AND MASK DATA PREP I

9235 04 Layout compliance for triple patterning lithography: an iterative approach (Invited Paper) [9235-3]
9235 05 Double-patterning optimization in 20nm SRAM design [9235-4]
9235 06 Pattern-based pre-OPC operation to improve model-based OPC runtime [9235-5]
9235 07 Conducting OPC retargeting as guided by principles of classical dynamics [9235-6]

SIMULATION, OPC, AND MASK DATA PREP II

9235 08 Trends in mask data preparation (Invited Paper) [9235-7]
9235 09 Model-based virtual VSB mask writer verification for efficient mask error checking and optimization prior to MDP [9235-8]
9235 0A Mask model calibration for MPC applications utilizing shot dose assignment [9235-9]
9235 0B Automated hotspot analysis with aerial image CD metrology for advanced logic devices [9235-10]
9235 0C OPC-Lite for gridded designs at low k1 [9235-11]

MATERIALS AND PROCESS I

9235 0D Plasma technology for advanced quartz mask etching (Invited Paper) [9235-12]
9235 0E Increasing efficiency and effectiveness of processes related to airborne particles in reticle mask environments [9235-13]
9235 0F Performance of GFIS mask repair system for various mask materials [9235-14]
9235 0G Defects caused by blank masks and repair solution with nanomachining for 20nm node [9235-15]
9235 0I Intra-field CDU map correlation between SEMs and aerial image characterization [9235-17]

EUV MASK I

9235 0J Imaging impact of multilayer tuning in EUV masks, experimental validation [9235-18]
9235 0K A broader view on EUV-masks: adding complementary imaging modes to the SHARP microscope [9235-19]
9235 0L Phase-enhanced defect sensitivity for EUV mask inspection [9235-20]
9235 0M Capability of particle inspection on patterned EUV mask using model EBYE M [9235-21]
9235 0N AIMS EUV first light imaging performance [9235-22]

MATERIALS AND PROCESS II

9235 0O Negative tone development process for ArF immersion extension (Invited Paper) [9235-23]
9235 0P Characterization of a new polarity switching negative tone e-beam resist for 14nm and 10nm logic node mask fabrication and beyond [9235-24]
9235 0Q Increasing reticle inspection efficiency and reducing wafer print-checks at 14nm using automated defect classification and simulation [9235-51]
9235 0R Bringing mask repair to the next level [9235-57]
9235 0S Laser-written binary OMOG photomasks for high-volume non-critical 193-nm photolithographic layers [9235-27]

SIMULATION, OPC, AND MASK DATA PREP III

9235 0T MDP challenges from a software provider's perspective (Invited Paper) [9235-28]
9235 0U Effective corner rounding correction in the data preparation for electron beam lithography [9235-29]
9235 0V Photonic curvilinear data processing [9235-30]
MASK PATTERNING

9235 0W  Mask data processing in the era of multibeam writers (Invited Paper) [9235-31]
9235 0X  EBM-9000: EB mask writer for product mask fabrication of 16nm half-pitch generation and beyond [9235-32]
9235 0Y  Study of heating effect in multi-beam mask writing [9235-33]
9235 0Z  Resist charging effect correction function qualification for photomasks production [9235-34]

EUV MASK II

9235 13  EUV mask black border evolution [9235-38]
9235 14  The feasibility of EUV lithography for printing circuits with 4 nm feature size [9235-39]

EUV MASK III

9235 15  Capability of etched multilayer EUV mask fabrication [9235-40]
9235 16  Repairing native defects on EUV mask blanks [9235-41]
9235 17  Carbon removal from trenches on EUV reticles [9235-42]
9235 18  The study on EUV mask cleaning without Ru surface damage [9235-43]

POSTER SESSION: EUV MASK

9235 1A  Effect of amplitude roughness on EUV mask specifications [9235-45]
9235 1B  Impact of B4C capping layer for EUV mask on the sensitivity of patterned mask inspection using projection electron microscope [9235-46]
9235 1C  Recent results from EUVL patterned mask inspection using projection electron microscope system [9235-47]
9235 1D  Determination of line profiles on nano-structured surfaces using EUV and x-ray scattering [9235-48]
9235 1E  Particle reduction and control in EUV etching process [9235-49]
9235 1F  A new mask exposure and analysis facility [9235-77]
POSTER SESSION: BUSINESS

| 9235 1G | A reusable framework for data-mining mask shop tools [9235-50] |

POSTER SESSION: INSPECTION

| 9235 1H | Phase defect detection signal analysis: dependence of defect size variation [9235-52] |
| 9235 1I | Best-practice evaluation-methods for wafer-fab photomask-requalification inspection tools [9235-53] |
| 9235 1J | Automatic classification of blank substrate defects [9235-54] |
| 9235 1K | Study of high sensitivity DUV inspection for sub-20nm devices with complex OPCs [9235-75] |

POSTER SESSION: MATERIAL AND PROCESS

| 9235 1L | Development and characterization of advanced phase-shift mask blanks for 14nm node and beyond [9235-25] |
| 9235 1M | New grade of 9-inch size mask blanks for 450mm wafer process [9235-55] |
| 9235 1N | The feasibility of the additional process for improving pattern collapse in develop process [9235-56] |

POSTER SESSION: METROLOGY

| 9235 1P | Further beyond: registration and overlay control enhancements for optical masks [9235-58] |
| 9235 1R | A method of utilizing AIMS to quantify lithographic performance of high transmittance mask [9235-60] |
| 9235 1S | On the benefit of high resolution and low aberrations for in-die mask registration metrology [9235-61] |

POSTER SESSION: MASK DATA PREPARATION

<p>| 9235 1T | Using rule-based shot dose assignment in model-based MPC applications [9235-62] |
| 9235 1U | Short feedback loop for OPC model based on wafer level CD [9235-63] |
| 9235 1V | Shot overlap model-based fracturing of curvilinear OPC layouts [9235-64] |
| 9235 1W | Efficient model-based dummy-fill OPC correction flow for deep sub-micron technology nodes [9235-65] |</p>

**POSTER SESSION: PATTERNING**

| 9235 20 | Assessment of carbon layer growth induced by resists outgassing in multi e-beams lithography | [9235-69] |
| 9235 21 | General shot refinement technique on fracturing of curvilinear shape for VSB mask writer | [9235-70] |

**POSTER SESSION: YIELD MANAGEMENT**

| 9235 22 | Impact of reticle writing errors on the on-product overlay performance | [9235-71] |
| 9235 23 | The defect printability study for 28nm mode mask                      | [9235-72] |
| 9235 24 | Characteristics and issues of haze management in a wafer fabrication environment | [9235-73] |
| 9235 25 | Qualification of local advanced cryogenic cleaning technology for 14nm photomask fabrication | [9235-74] |
Authors

Numbers in the index correspond to the last two digits of the six-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Banqiu Wu, Applied Materials, Inc. (United States)

Session Chairs

1. Keynote Session
   Paul W. Ackmann, GLOBALFOUNDRIES Inc. (United States)
   Naoya Hayashi, Dai Nippon Printing Company, Ltd. (Japan)
   Michael T. Postek, National Institute of Standards and Technology (United States)
2 Invitation Session: Joint Session with Photomask and Scanning Microscopies
   Paul W. Ackmann, GLOBALFOUNDRIES Inc. (United States)
   Naoya Hayashi, Dai Nippon Printing Company, Ltd. (Japan)
   Michael T. Postek, National Institute of Standards and Technology (United States)

3 Simulation, OPC, and Mask Data Prep I
   Aki Fujimura, D2S, Inc. (United States)
   Banqiu Wu, Applied Materials, Inc. (United States)

4 Simulation, OPC, and Mask Data Prep II
   Peter D. Buck, Mentor Graphics Corporation (United States)
   Jim N. Wiley, ASML US, Inc. (United States)

5 Materials and Process I
   Mark T. Jee, HOYA Corporation USA (United States)
   Emmanuel Rausa, Plasma-Therm LLC (United States)

6 Metrology: Joint Session with Photomask and Scanning Microscopies
   Michael T. Postek, National Institute of Standards and Technology (United States)
   Thomas Scherübl, Carl Zeiss SMS GmbH (Germany)

7 EUV Mask I
   Pawitter J. Mangat, GLOBALFOUNDRIES Inc. (United States)
   Bryan S. Kasprowicz, Photronics, Inc. (United States)

8 Materials and Process II
   Brian J. Grenon, RAVE LLC (United States)
   Glenn R. Dickey, Shin-Etsu MicroSi, Inc. (United States)

9 Simulation, OPC, and Mask Data Prep III
   Linyong Pang, D2S, Inc. (United States)
   Shy-Jay Lin, Taiwan Semiconductor Manufacturing Company Ltd. (Taiwan)

10 Mask Patterning
    Kenichi Saito, NuFlare Technology, Inc. (Japan)
    Russell B. Cinque, JEOL USA Inc. (United States)

11 PMJ 2014 Panel Discussion Overview
    Naoya Hayashi, Dai Nippon Printing Company, Ltd. (Japan)
    Paul W. Ackmann, GLOBALFOUNDRIES Inc. (United States)
12 EMLC 2014 Best Paper
Thomas B. Faure, IBM Corporation (United States)
Pawitter J. Mangat, GLOBALFOUNDRIES Inc. (United States)

13 EUV Mask II
Thomas B. Faure, IBM Corporation (United States)
Pawitter J. Mangat, GLOBALFOUNDRIES Inc. (United States)

14 EUV Mask III
Uwe Dietze, SUSS MicroTec Inc. (United States)
M. Warren Montgomery, SUNY College of Nanoscale Science and Engineering (United States)
MONTEREY, California, USA — Highlights at the recent SPIE “Photomask Technology 2014”. The event ran 16-18 September at the Monterey Conference Center and Monterey Marriott, and was sponsored by SPIE.

We concluded Photomask 2014 on Thursday September 18th after three very information packed sessions. We started with keynote speaker Martin van den Brink, President and CTO of ASML, who said that extreme ultraviolet (EUV) source technology is reaching performance levels that enable introduction into production lines in select cases at the 10-nanometer node, and that progress is such that it should soon be ready for full-scale introduction at the 7-nanometer node and ended with EUV mask making advances.

Photomask Technology this year included more than 70 presentations on mask making, EUV, mask data preparation, 9-inch glass, emerging mask technologies, mask business, and related topics. Paul Ackmann (GlobalFoundries) was symposium chair, and Naoya Hayashi (Dai Nippon Printing) was symposium co-chair.

Van den Brink’s talk detailed ASML’s steady and substantial progress over the past several months improving the technology for eventual scale-up in semiconductor manufacturing. The challenge, he said, is implementing affordable scaling to create lower cost and improved performance. This can be achieved through holistic lithography immersion driving productivity and yield with multiple patterning, and with EUV technology driving productivity and improving operational cost to enable 2D patterning and simpler processing. He also explained the extendibility of EUV lithography with higher NA tool.

We co-located with the SPIE “Scanning Microscopies” conference run by Michael Postek. This was the first time that the SPIE Scanning Microscopies conference was held in Monterey. This had very good synergy and helped with the overall attendance. The joint sessions provided an interesting insight between metrology and mask making.

Scanning Microscopies brought approximately 50 more presentations to the conference, in areas such as nanomaterials, optical and particle beam, scanned probe, and imaging. Symposium chairs were Michael Postek and Dale Newbury (National Institute of Standards and Technology), Frank Platek (U.S. Food and Drug Administration), and Tim Maugel (University of Maryland, College Park).

Awards were again presented during the Banquet on Wednesday Evening. Jim Wiley, EUV Infrastructure Executive Strategist at ASML, was presented with the 2014 Photomask Lifetime Achievement Award in recognition of contributions to the photomask industry, particularly in the area of photomask defect characterization, printability, and publication. Dan Meisburger of Tec-Start Consulting was awarded...
the 2014 BACUS Prize in recognition of his work and influence in the development of the high-speed electron beam mask inspection system. Linda He Yi of the Nanoelectronics Lab in the Department of Electrical Engineering at Stanford University was awarded the 2014 BACUS Scholarship.

Thursday continued the panel discussion format chaired by Naoya Hayashi. Hayashi-san pulled together a very good panel on data complexity with industry experts. The panel was focused on the expansion of data for advanced nodes. Panel members from the industry and their messages were as follows:

**Mask Complexity: How to solve the issues**

Peter Buck (Mentor Graphics): Embracing Mask Complexity

Bala Thumma (Synopsis): We are not at the breaking point yet!

Laurent Tau (TSMC): Fab concerns in Mask Technology

Shusuke Yoshitake (NuFlare): Mask Writing Throughput Improvement

Shuichiro Ohara (Nippon Control Systems): Challenges in Mask Data Preparation

Dong-Hoon Chung (Samsung): Issues on Inspection and Metrology

Yalin Xiong (KLA-Tencor): Mask Inspection for 10nm and 7nm Nodes

Daniel Chalom (IMS Nanofabrication AG): How to reduce the mask writing time?

**Symposium Chairs**
Paul W. Ackmann
Naoya Hayashi

**BACUS Steering Committee Members**
Frank Abboud
Bryan S. Kasprowicz
Members of the Photomask Technology and Advanced Lithography community around the world were saddened to hear of the death of Oliver Kienzle, CEO and Head of the Strategic Business Unit Semiconductor Metrology Systems at Carl Zeiss SMS GmbH.

We lost Oliver shortly after Photomask Technology 2014. Dr. Kienzle died in Germany on 27 September.

He will be greatly missed.
