Volume 9242

Proceedings of SPIE 0277-786X, V. 9242

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Remote Sensing of Clouds and the Atmosphere XIX; and Optics in Atmospheric Propagation and Adaptive Systems XVII,
edited by Adolfo Comerón, Evgueni I. Kassianov, Klaus Schäfer, Richard H. Picard, Karin Stein, John D. Gonglewski,
Proc. of SPIE Vol. 9242, 924201 · © 2014 SPIE · CCC code: 0277-786X/14/\$18 · doi: 10.1117/12.2177773

Proc. of SPIE Vol. 9242 924201-1

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID Number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID Number.

Part A Remote Sensing of Clouds and the Atmosphere XIX

RADIATIVE TRANSFER I

9242 02	Cloud pattern prediction from geostationary meteorological satellite images for solar energy forecasting [9242-1]
9242 03	Active remote sensing observations for cirrus clouds profiling at subtropical and polar latitudes [9242-2]
9242 04	Fast rendering of clouds from 3D radiative transfer computations [9242-3]
9242 05	Retrieval of areal-averaged spectral surface albedo from transmission data alone: computationally simple and fast approach [9242-4]
9242 06	Connecting ground based in-situ observations, ground-based remote sensing and satellite data within the Pan Eurasian Experiment (PEEX) program (Invited Paper) [9242-5]
9242 08	Influence of broken cloud fields on reflectance retrievals [9242-7]
9242 09	Multi-platform in-situ and remote sensing techniques to derive Saharan dust properties during AMISOC-TNF 2013 [9242-8]

RADIATIVE TRANSFER II

9242 0C	Estimation of optical properties of aerosols and bidirectional reflectance from PARASOL/POLDER data over land [9242-11]
---------	--

ATMOSPHERIC PROFILING OF AEROSOL, TRACE GASES, AND METEOROLOGICAL PARAMETERS OF RS I

9242 0D	Spectral reference line data relevant to remote sensing applications: a review and outline of the EUMETRISPEC project [9242-12]
---------	--

- 9242 OE **Variability of Mediterranean aerosols properties at three regional background sites in the western Mediterranean Basin** [9242-13]
- 9242 OF **Retrieval of boundary layer height from lidar using extended Kalman filter approach, classic methods, and backtrajectory cluster analysis (Best Student Paper Award)** [9242-15]
- 9242 OI **Retrieving the microphysical characteristics of cirrus clouds from lidar data by depolarization and color ratios** [9242-17]
- 9242 OJ **Monitoring particulate matters in urban areas in Malaysia using remote sensing and ground-based measurements** [9242-18]

ATMOSPHERIC PROFILING OF AEROSOL, TRACE GASES, AND METEOROLOGICAL PARAMETERS OF RS II

- 9242 OK **Release 2 data products from the Ozone Mapping and Profiler Suite (OMPS) Limb Profiler** [9242-19]
- 9242 OL **Validation of AIRS high-resolution stratospheric temperature retrievals** [9242-20]
- 9242 ON **Influence of large and supersize droplets on propagation of lidar radiation in cloud aerosol: numerical statistical simulation** [9242-22]

LIDAR, RADAR AND PASSIVE ATMOSPHERIC MEASUREMENTS I

- 9242 OO **Airborne midwave and longwave infrared hyperspectral imaging of gases** [9242-23]
- 9242 OP **GreenHouse Observations of the Stratosphere and Troposphere (GHOST): a novel shortwave infrared spectrometer developed for the Global Hawk unmanned aerial vehicle** [9242-24]
- 9242 OQ **Acoustic atmospheric tomography using multiple unmanned aerial vehicles** [9242-25]
- 9242 OR **3D acoustic atmospheric tomography** [9242-26]
- 9242 OS **Kerbside DOAS measurements of air pollutants** [9242-27]
- 9242 OT **Measurements of formaldehyde total content in troposphere using DOAS technique in Moscow Region: preliminary results of three year observations** [9242-28]

LIDAR, RADAR AND PASSIVE ATMOSPHERIC MEASUREMENTS II

- 9242 OU **Dimensionless parameters for lidar performance characterization** [9242-29]
- 9242 OV **Estimates of cumulative rainfall over a large area by weather radar** [9242-30]
- 9242 OW **Validation of atmospheric correction algorithm ATCOR** [9242-31]

- 9242 0X **Using lunar observations to validate pointing accuracy and geolocation, detector sensitivity stability and static point response of the CERES instruments** [9242-32]
- 9242 0Y **Comparison of unfiltered radiances measured by CERES instruments aboard the S-NPP and Terra/Aqua satellites** [9242-33]
- 9242 10 **Algorithms comparison for calculating downward longwave radiation by MODIS data under clear and cloudy skies** [9242-36]
- 9242 11 **Estimation of all-sky downward shortwave radiation from MTSAT-1R images and MODIS data** [9242-37]

POSTER SESSION: REMOTE SENSING OF CLOUDS AND THE ATMOSPHERE

- 9242 12 **Natural and anthropogenic particles over East Asia** [9242-38]
- 9242 13 **A neural network approach for monitoring of volcanic SO₂ and cloud height using hyperspectral measurements** [9242-39]
- 9242 14 **Volcanic emissions from AIRS observations: detection methods, case study, and statistical analysis** [9242-40]
- 9242 15 **Identifying volcanic endmembers in hyperspectral images using spectral unmixing** [9242-41]
- 9242 16 **Air pollutant retrieval in East Asia from space and ground: algorithm improvement** [9242-42]
- 9242 17 **Analysis of microphysical processes in fog** [9242-43]
- 9242 19 **Estimation of cloud base height using ground-based stereo photography: method and first results** [9242-47]
- 9242 1G **Three-dimensional fusion of reflectivities from space and ground radar observations** [9242-44]

Part B *Optics in Atmospheric Propagation and Adaptive Systems XVII*

CHARACTERIZATION OF THE ENVIRONMENT

- 9242 1H **Characteristics of turbulence driven atmospheric blur over coastal water** [9242-60]
- 9242 1I **Investigation of optical turbulence in the atmospheric surface layer using scintillometer measurements along a slant path and comparison to ultrasonic anemometer measurements** [9242-61]
- 9242 1J **Exploration of satellite-derived data products for atmospheric turbulence studies** [9242-62]
- 9242 1K **Experimental evaluation of optical crosswind measurement systems** [9242-63]

PROPAGATION THROUGH OPTICAL TURBULENCE

- 9242 1L **Experimental setup for investigation of laser beam propagation along horizontal urban path** [9242-64]
- 9242 1N **Influence of each Zernike aberration on the propagation of laser beams through atmospheric turbulence** [9242-66]
- 9242 1O **Modeling of laser beam propagation through turbulence** [9242-68]

IMAGING THROUGH TURBULENT MEDIA

- 9242 1P **Correction methods for underwater turbulence degraded imaging** [9242-74]
- 9242 1Q **Scintillations in the imaging through turbulence** [9242-75]
- 9242 1R **GPU-based simulation of optical propagation through turbulence for active and passive imaging** [9242-76]
- 9242 1S **Ship plume modelling in EOSTAR** [9242-77]

WAVEFRONT SENSING

- 9242 1T **Characterization of the digital holographic wavefront sensor** [9242-69]
- 9242 1U **Dual-mode wavefront detection sensor based on liquid crystal micro-lens array** [9242-70]
- 9242 1V **Simulation of SNR effect on the detecting precision of Hartman-Shack sensor** [9242-71]

NEW DEVICES FOR ATMOSPHERIC MEASUREMENTS

- 9242 1W **Optically addressed and submillisecond response phase only liquid crystal spatial light modulator** [9242-73]

POSTER SESSION: OPTICS IN ATMOSPHERIC PROPAGATION AND ADAPTIVE SYSTEMS

- 9242 1X **Remaining distortions, conditioned dimension of guide source** [9242-67]

Authors

Numbers in the index correspond to the last two digits of the six-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Introduction to Part A: Remote Sensing of Clouds and the Atmosphere XIX

The desire to improve our understanding of the Earth's climate is at an all-time high and this, along with other critical needs, requires development of advanced remote-sensing instruments and corresponding innovative retrievals. A rich diversity of related topics was covered in the Remote Sensing of Clouds and Atmosphere Conference with 44 presenters from Europe, North and South America, Africa, Asia, and Australia. A large international participation (15 countries were represented) clearly demonstrated a high level of worldwide interest in the current state of remote sensing, its impressive applications, and future directions. Engaging and high-quality presentations from participants during three oral and one poster sessions formed the heart of the conference—which included both talented early career researchers and distinguished senior scientists. In particular, two invited speakers, Prof. Mace (University of Utah, United States) and Prof. Petäjä (University of Helsinki, Finland), covered a remarkably diverse range of topics within the conference charter and stimulated active and fruitful discussions. The meeting was held in Amsterdam, a delightful city with numerous picturesque bridges over the city's canals. Similar to previous SPIE conferences, this conference in Amsterdam offered invaluable “bridges” in terms of science and human connections, and fostered an encouraging environment for sharing ideas and findings with other researchers from around the world. We are indebted to all participants for their valuable contributions and the SPIE Organizing Committee and hosting organizers from the Netherlands for a smoothly managed and well-organized conference. These contributions and hospitality formed a true team effort that resulted in a conference that was both enjoyable and highly successful.
