The CCC fee code is 1605-7422/15/\$18.00.

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print. Papers are published as they are submitted and meet publication criteria. A unique citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID Number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages.

Contents

v	<i>Authors</i>
vii	<i>Conference Committee</i>
ix	<i>Introduction</i>

MOBILE-PHONE ENABLED COST-EFFECTIVE IMAGING, SENSING AND DIAGNOSTICS TECHNOLOGIES

9314 05	Field quantification of plant chlorophyll content using Google Glass [9314-4]
---------	--

MOBILE-PHONE ENABLED CERVICAL AND ENT IMAGING

9314 0A	Remote quality assurance in cervical cancer screening in low resource settings using a handheld smartphone-based colposcope [9314-9]
9314 0B	Optical design of low cost imaging system for mobile medical applications [9314-10]
9314 0C	Cellphone based mobile colposcope for the evaluation of women with abnormal cervical cancer screening [9314-11]
9314 0D	Near-infrared imaging for management of chronic maxillary sinusitis [9314-12]

OPTICAL COHERENCE TOMOGRAPHY SYSTEMS ON A MOBILE PHONE

9314 0F	Characterization of light distribution and optimization of detector position for multiple reference optical coherence tomography [9314-14]
---------	---

MOBILE MICROSCOPY, SENSING AND DIAGNOSTICS I

9314 0J	A game-based platform for crowd-sourcing biomedical image diagnosis and standardized remote training and education of diagnosticians [9314-19]
---------	---

SPECTROSCOPY AND SPECTRAL IMAGING

9314 0O	Proposal of AAA-battery-size one-shot ATR Fourier spectroscopic imager for on-site analysis: Simultaneous measurement of multi-components with high accuracy [9314-24]
9314 0P	Proposal of snapshot line-imaging Fourier spectroscopy for smartphone [9314-25]
9314 0Q	Palm-size wide-field Fourier spectroscopic imager with uncooled infrared microbolometer arrays for smartphone [9314-26]

- 9314 OR **Inkjet-fabricated surface enhanced Raman spectroscopy (SERS) sensors on paper for biosensing [9314-27]**

MOBILE-PHONE ENABLED FLUORESCENCE IMAGING AND MEASUREMENTS

- 9314 OS **Field portable mobile phone based fluorescence microscopy for detection of *Giardia lamblia* cysts in water samples [9314-28]**
- 9314 OT **Low cost integrating cavity for monitoring of environmental toxins [9314-30]**
- 9314 OU **Smartphone-enabled filterless fluorescence assay utilizing the pyrene excimer [9314-31]**

POSTER SESSION

- 9314 OV **Spoilage of foods monitored by native fluorescence spectroscopy with selective excitation wavelength [9314-33]**

Authors

Numbers in the index correspond to the last two digits of the six-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Conference Committee

Symposium Chairs

James G. Fujimoto, Massachusetts Institute of Technology
(United States)

R. Rox Anderson, Wellman Center for Photomedicine,
Massachusetts General Hospital (United States) and Harvard
School of Medicine (United States)

Program Track Chairs

Tuan Vo-Dinh, Fitzpatrick Institute for Photonics, Duke University
(United States)

Anita Mahadevan-Jansen, Vanderbilt University (United States)

Conference Chairs

David Levitz, MobileOCT (Israel)

Aydogan Ozcan, University of California, Los Angeles (United States)

David Erickson, Cornell University (United States)

Conference Program Committee

Gerard L. Coté, Texas A&M University (United States)

Frances S. Ligler, North Carolina State University (United States)

Anita Mahadevan-Jansen, Vanderbilt University (United States)

Nirmala Ramanujam, Duke University (United States)

Avi Rasooly, National Institutes of Health (United States)

Eric A. Swanson, OCT News (United States)

Sebastian Wachsmann-Hogiu, NSF Center for Biophotonics Science
and Technology (United States)

Ian M. White, University of Maryland, College Park (United States)

Session Chairs

- 1 Mobile-Phone Enabled Cost-Effective Imaging, Sensing and
Diagnostics Technologies
Aydogan Ozcan, University of California, Los Angeles (United States)
- 2 Mobile-Phone Enabled Skin Imaging Technologies
David Erickson, Cornell University (United States)
- 3 Mobile-Phone Enabled Cervical and ENT Imaging
Anita Mahadevan-Jansen, Vanderbilt University (United States)

- 4 Optical Coherence Tomography Systems on a Mobile Phone
 Aydogan Ozcan, University of California, Los Angeles (United States)
- 5 Mobile Microscopy, Sensing and Diagnostics I
 David Erickson, Cornell University (United States)
- 6 Mobile Microscopy, Sensing and Diagnostics II
 David Levitz, MobileOCT (Israel)
- 7 Spectroscopy and Spectral Imaging
 Euan McLeod, University of California, Los Angeles (United States)
- 8 Mobile-Phone Enabled Fluorescence Imaging and Measurements
 David Erickson, Cornell University (United States)

Introduction

This year, we are proud to present the first-ever SPIE Proceedings volume on a new conference on *Optics and Biophotonics in Low-Resource Settings*. This conference is a huge development for SPIE's Photonics West meetings, and in the optics community in general. For several years now, Photonics West has been the leading biomedical optics conference in the world. However, the bulk of the research presented at Photonics West came primarily from leading labs in OECD countries, focusing on pushing the boundaries of science by improving the spatial resolution of optical coherence tomography, developing multi-modal endoscopes for imaging a host of internal tissues, spectroscopy, optogenetics, photodynamic and low-light therapies. Until very recently, R&D in biomedical optics consisted almost exclusively of innovations of such high-end systems.

However, recent developments in technology have changed everything. The revolution in digital electronics has significantly reduced both the price and size of sensors, light sources, and computing units. With the smartphone, mobile imaging systems have been placed in the hands of billions of people. Indeed, the cameras in smartphones have better specs than many of the cameras in high-end medical imaging systems. Prototyping has become faster and easier. Not only can mechanical structures be printed inexpensively in 3D, but now, so can lenses and other optical elements. Innovations in nanotechnology and microfluidics enable rapid optical analysis of liquid specimens collected from any or all bodily fluids. With these trends, many believe that growth in healthcare technologies in the future will be based on innovative low-cost solutions that bring healthcare to the masses, which currently lack access to it.

Approximately 85 percent of the world's population (6 billion people) lives outside OECD nations, where resources and facilities available to deliver medical care are limited. Optical technologies are uniquely positioned to enable emerging economies to improve the delivery of healthcare to their people. Optical methods can non-invasively assess the microstructure, function, and composition of tissues, as well as deliver targeted therapies. The revolution in digital electronics has significantly reduced both the price and size of components (e.g., sensors, light sources, computing units) critical to most optical systems. Integrating such optical components with compact microfluidics and low-cost biomarkers allows for building robust optical systems that are inexpensive and scalable.

Attendance at the conference was very impressive. In every single session, the room was overflowing with people, including many leading investigators from the labs that develop high-end systems. We sincerely hope that this conference gets people thinking on how to use optical technologies to improve healthcare for the billions of people on the bottom of the pyramid.
