Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print. Papers are published as they are submitted and meet publication criteria. A unique citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID Number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages.

Contents

vii	<i>Authors</i>
ix	<i>Conference Committee</i>
xi	<i>Introduction</i>

SESSION 1 KEYNOTE SESSION

9326 02	Practical pathology for thermal tissue applications (Keynote Paper) [9326-1]
9326 03	Coupling of physical characteristics of non-ionizing irradiation to specific mechanisms of cell death: Are we there yet? (Keynote Paper) [9326-2]
9326 04	Utility and translatability of mathematical modeling, cell culture and small and large animal models in magnetic nanoparticle hyperthermia cancer treatment research (Keynote Paper) [9326-3]
9326 05	Developing an open platform for evidence-based microwave ablation treatment planning and validation (Keynote Paper) [9326-4]

SESSION 2 PLASMA MEDICINE/ARGON PLASMA

9326 06	Antimicrobial outcomes in plasma medicine (Invited Paper) [9326-5]
9326 07	The differing behavior of electrosurgical devices made of various electrode materials operating under plasma conditions (Invited Paper) [9326-6]
9326 08	Introduction of argon beam coagulation functionality to robotic procedures using the ABC D-Flex probe: equivalency to an existing laparoscopic instrument [9326-7]
9326 09	Characterization and literature review of bowel perforation injuring using argon beam coagulation [9326-8]

SESSION 3 VESSEL SEALING AND FUSION

9326 0A	Numerical model study of radio frequency vessel sealing thermodynamics (Invited Paper) [9326-9]
9326 0B	The role of glycosaminoglycans in tissue adhesion during energy-based vessel sealing [9326-10]
9326 0C	A novel parameter for predicting arterial fusion and ablation in finite element models [9326-11]

9326 OD **A simplified low power system for effective vessel sealing** [9326-12]

SESSION 4 THERMAL THERAPY

9326 OE **Tissue healing response following hyperthermic vapor ablation in the porcine longissimus muscle** [9326-13]

9326 OF **Development of an endoluminal high-intensity ultrasound applicator for image-guided thermal therapy of pancreatic tumors** [9326-14]

9326 OG **Circumferential targeted renal sympathetic nerve denervation with preservation of the renal arterial wall using intra-luminal ultrasound** [9326-15]

9326 OH **Catheter-based high-intensity ultrasound for epicardial ablation of the left ventricle: device design and *in vivo* feasibility** [9326-16]

9326 OI **Design and analysis of a conformal patch antenna for a wearable breast hyperthermia treatment system** [9326-17]

SESSION 5 NANOMEDICINE

9326 OK **Similarities and differences in ablative and non-ablative iron oxide nanoparticle hyperthermia cancer treatment (Invited Paper)** [9326-21]

9326 OL **Magnetic nanoparticle hyperthermia cancer treatment efficacy dependence on cellular and tissue level particle concentration and particle heating properties** [9326-22]

9326 OM **Alternating magnetic field optimization for IONP hyperthermia cancer treatment** [9326-23]

9326 ON **Macroscopic and microscopic biodistribution of intravenously administered iron oxide nanoparticles** [9326-24]

9326 OP **Effect of radiation energy and intracellular iron dose on iron oxide nanoparticle enhancement of radiation cytotoxicity** [9326-26]

SESSION 6 IMAGING

9326 OQ **SWIFT-MRI imaging and quantitative assessment of IONPs in murine tumors following intra-tumor and systemic delivery** [9326-27]

9326 OR **Evaluation of high intensity focused ultrasound ablation of prostate tumor with hyperpolarized ¹³C imaging biomarkers** [9326-28]

9326 OS **Characterization of nanosecond pulse electrical field shock waves using imaging techniques** [9326-29]

9326 OT **Nonlinear imaging of lipid membrane alterations elicited by nanosecond pulsed electric fields** [9326-30]

SESSION 7 SIMULATIONS AND TREATMENT PLANNING

- 9326 0U **Multiple-antenna microwave ablation: analysis of non-parallel antenna implants** [9326-31]
- 9326 0V **Three-dimension finite-element analyses of multiple electrodes bipolar RF global endometrial ablation** [9326-32]
- 9326 0W **Finite element method (FEM) model of the mechanical stress on phospholipid membranes from shockwaves produced in nanosecond electric pulses (nsEP)** [9326-33]
- 9326 0X **Development of a fast 3D treatment planning platform for clinical interstitial microwave hyperthermia within free-hand obliquely implanted HDR catheters** [9326-34]
- 9326 0Y **A methodology to analyze treatment zone geometry and variability of percutaneous thermal ablation** [9326-35]

SESSION 8 ELECTROPORATION AND NANOPULSE EFFECTS

- 9326 10 **External stimulation by nanosecond pulsed electric fields to enhance cellular uptake of nanoparticles** [9326-37]
- 9326 11 **The role of PIP₂ and the IP₃/DAG pathway in intracellular calcium release and cell survival during nanosecond electric pulse exposures** [9326-38]
- 9326 12 **Cells exposed to nanosecond electrical pulses exhibit biomarkers of mechanical stress** [9326-39]

Authors

Numbers in the index correspond to the last two digits of the six-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Conference Committee

Symposium Chairs

James G. Fujimoto, Massachusetts Institute of Technology
(United States)

R. Rox Anderson, Wellman Center for Photomedicine, Massachusetts
General Hospital (United States) and Harvard School of Medicine
(United States)

Program Track Chair

Steven L. Jacques, Oregon Health & Science University
(United States)

Conference Chair

Thomas P. Ryan, Smith and Nephew (United States)

Conference Program Committee

James E. Coad, West Virginia University (United States)

Chris J. Diederich, University of California, San Francisco
(United States)

P. Jack Hoopes, Geisel School of Medicine, Dartmouth College
(United States)

Paul R. Stauffer, Thomas Jefferson University (United States)

Sharon L. Thomsen, Pathology Consultant to Engineers and Physicists
(United States)

John A. Pearce, The University of Texas at Austin (United States)

Session Chairs

- 1 Keynote Session
Thomas P. Ryan, ArthroCare Corporation (United States)
- 2 Plasma Medicine/ Argon Plasma
John A. Pearce, The University of Texas at Austin (United States)
- 3 Vessel Sealing and Fusion
Kenneth D. Taylor, ConMed Electrosurgery (United States)
- 4 Thermal Therapy
Punit Prakash, Kansas State University (United States)

- 5 Nanomedicine
Chris J. Diederich, University of California, San Francisco
(United States)
- 6 Imaging
P. Jack Hoopes, Geisel School of Medicine, Dartmouth College
(United States)
- 7 Simulations and Treatment Planning
Kenneth R. Stalder, AnthroCare Corporation (United States)
- 8 Electroporation and Nanopulse Effects
Alicia A. Petryk, Dartmouth College (United States)

Introduction

Welcome to the proceedings for the 2015 SPIE Conference: Energy-Based Treatment of Tissue and Assessment. This is the 17th year we have held this conference with SPIE. Our first conference was entitled: Surgical Applications of Energy.

This year, we had a variety of papers covering energy-based devices and techniques in medicine. Over 40 presentations were made this year and the publications associated with those talks make up another great *Proceedings of SPIE*. We had a number of papers covering nanoparticles in the treatment of cancer with fabrication, imaging, modeling, cell effects and biodistribution; as well as the effects of external electrical and magnetic fields to activate and, in some cases, provide heat dosing.

There were a number of ablation devices covering RF, microwave, and ultrasound for thermal therapy; including some very novel microwave and ultrasound devices.

For the second time, there was a session on Plasma Medicine and the effects including: bactericide, tissue healing, and tissue ablation (removal), and reshaping with non-thermal surgical technologies. There were also vessel sealing papers that cover models and the use of a valuable surgical technique enabled by recent technology.

As always, we see the evolution of treatment technologies, aided by image guidance, and driven by evidence-based medicine. Several papers covered the effects of nanosecond electrical pulses including bioeffects and shock waves.

Lastly, it was valuable to have companies present their latest technologies and show how surgeons or interventional radiologists could use these devices for the treatment of patients.

Thomas P. Ryan
