Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print. Papers are published as they are submitted and meet publication criteria. A unique citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID Number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages.

Introduction

The chairs would like to dedicate this volume to the memory of Professors Alois Krost, Bruno Meyer, and Fritz Henneberger. All three were frequent contributors to the Oxide-Based Materials and Devices conference and its predecessor, the Zinc Oxide Based Materials and Devices conference, at Photonics West. Krost, Meyer, and Henneberger will be sorely missed by the community, both personally and for their inestimable contributions to the field.
