SESSION 4  PHASE CONTRAST IMAGING

9412 0E  Low dose digital x-ray imaging with avalanche amorphous selenium [9412-13]
9412 0F  Multi-energy imagers for a radiotherapy treatment environment [9412-14]
9412 0G  Investigation of the screen optics of thick CsI(Tl) detectors [9412-15]

SESSION 5  ALGORITHMIC DEVELOPMENTS

9412 0H  New signal extraction method in x-ray differential phase contrast imaging with a tilted collinear analyzer grating [9412-16]
9412 0J  Phase-contrast imaging using radiation sources based on laser-plasma wakefield accelerators: state of the art and future development [9412-18]
9412 0K  Laboratory implementation of edge illumination x-ray phase-contrast imaging with energy-resolved detectors [9412-19]
9412 0L  Small animal lung imaging with an in-line x-ray phase contrast benchtop system [9412-20]
9412 0M  Redefining the lower statistical limit in x-ray phase-contrast imaging [9412-21]

WORKSHOP: UNCERTAINTIES IN THE MEDICAL IMAGING CHAIN

9412 0N  Quantifying and reducing uncertainties in cancer therapy [9412-214]

SESSION 6  COMPUTED TOMOGRAPHY I

9412 0O  Image-based material decomposition with a general volume constraint for photon-counting CT [9412-27]
Fluence field modulated CT on a clinical TomoTherapy radiation therapy machine [9412-28]

Dual-energy imaging of bone marrow edema on a dedicated multi-source cone-beam CT system for the extremities [9412-29]

Initial results from a prototype whole-body photon-counting computed tomography system [9412-30]

Fluid dynamic bowtie attenuators [9412-31]

A new CT system architecture for high temporal resolution with applications to improved geometric dose efficiency and sparse sampling [9412-32]

Spectral CT of the extremities with a silicon strip photon counting detector [9412-33]

Pulse detection logic for multibin photon counting detectors: beyond the simple comparator [9412-34]

Evaluation of spectral CT data acquisition methods via non-stochastic variance maps [9412-35]

Low rank approximation (LRA) based noise reduction in spectral-resolved x-ray imaging using photon counting detector [9412-36]

Multivariate Gaussian model based Cramér-Rao lower bound evaluation of the in-depth PCXD [9412-37]

Energy calibration of photon counting detectors using x-ray tube potential as a reference for material decomposition applications [9412-38]

Modelling the channel-wise count response of a photon-counting spectral CT detector to a broad x-ray spectrum [9412-39]

Quantitative imaging as cancer biomarker (Keynote Paper) [9412-40]

Respiratory motion compensation for simultaneous PET/MR based on a 3D-2D registration of strongly undersampled radial MR data: a simulation study [9412-41]

Theoretical and experimental comparison of image signal and noise for dual-energy subtraction angiography and conventional x-ray angiography [9412-42]
### SESSION 9  MEASUREMENTS, PHANTOMS, SIMULATIONS

| 9412 1A | A quantitative metrology for performance characterization of breast tomosynthesis systems based on an anthropomorphic phantom (Best Student Paper Award) [9412-43] |
| 9412 1B | Volumetric limiting spatial resolution analysis of four dimensional digital subtraction angiography (4D-DSA) [9412-44] |
| 9412 1C | New family of generalized metrics for comparative imaging system evaluation [9412-45] |
| 9412 1D | Approximate path seeking for statistical iterative reconstruction [9412-46] |
| 9412 1E | Enhancing 4D PC-MRI in an aortic phantom considering numerical simulations [9412-47] |
| 9412 1F | Experimental implementation of coded aperture coherent scatter spectral imaging of cancerous and healthy breast tissue samples [9412-48] |

### SESSION 10  BREAST IMAGING

| 9412 1G | Monte Carlo evaluation of the relationship between absorbed dose and contrast-to-noise ratio in coherent scatter breast CT [9412-49] |
| 9412 1H | Monte Carlo simulation of breast tomosynthesis: visibility of microcalcifications at different acquisition schemes [9412-50] |
| 9412 1I | Asymmetric scatter kernels for software-based scatter correction of gridless mammography [9412-51] |
| 9412 1J | Anatomical background noise power spectrum in differential phase contrast breast images [9412-52] |
| 9412 1K | Three dimensional dose distribution comparison of simple and complex acquisition trajectories in dedicated breast CT using radiochromic film [9412-53] |

### SESSION 11  RADIATION DOSE AND DOSIMETRY

| 9412 1L | Fluid-filled dynamic bowtie filter: a feasibility study [9412-54] |
| 9412 1M | Imaging task-based optimal kV and mA selection for CT radiation dose reduction: from filtered backprojection (FBP) to statistical model based iterative reconstruction (MBIR) [9412-55] |
| 9412 1N | First results from a prototype dynamic attenuator system [9412-56] |
| 9412 1O | Ultra low radiation dose digital subtraction angiography (DSA) imaging using low rank constraint [9412-57] |
### SESSION 12 PERFORMANCE EVALUATION

| 9412 1P | Evaluation of a video-based head motion tracking system for dedicated brain PET [9412-58] |
| 9412 1Q | Computation of synthetic mammograms with an edge-weighting algorithm [9412-59] |
| 9412 1R | Lesion insertion in projection domain for computed tomography image quality assessment [9412-60] |
| 9412 1S | Examining wide-arc digital breast tomosynthesis: optimization using a visual-search model observer [9412-61] |
| 9412 1T | Performance comparison of breast imaging modalities using a 4AFC human observer study [9412-62] |

### SESSION 13 X-RAY IMAGING

| 9412 1U | X-ray attenuation of adipose breast tissue: in-vitro and in-vivo measurements using spectral imaging [9412-63] |
| 9412 1W | Detector, collimator and real-time reconstructor for a new scanning-beam digital x-ray (SBDX) prototype [9412-65] |
| 9412 1Y | Digital breast tomosynthesis with minimal breast compression [9412-67] |

### SESSION 14 COMPUTED TOMOGRAPHY II

| 9412 20 | Task-driven imaging in cone-beam computed tomography (Best Student Paper Award) [9412-69] |
| 9412 21 | The rotate-plus-shift C-arm trajectory: complete CT data with limited angular rotation [9412-70] |
| 9412 22 | Simultaneous imaging of multiple contrast agents using full-spectrum micro-CT [9412-71] |
| 9412 23 | Spectral deblurring: an algorithm for high-resolution hybrid spectral CT [9412-72] |
| 9412 24 | Performance comparison between static and dynamic cardiac CT on perfusion quantitation and patient classification tasks [9412-73] |

### SESSION 15 TOMOSYNTHESIS

| 9412 25 | Methods to mitigate data truncation artifacts in multi-contrast tomosynthesis image reconstructions [9412-74] |
| 9412 26 | Feasibility study of the diagnosis and monitoring of cystic fibrosis in pediatric patients using stationary digital chest tomosynthesis [9412-75] |
9412 27  Segmentation methods for breast vasculature in dual-energy contrast-enhanced digital breast tomosynthesis [9412-76]

9412 28  Initial clinical evaluation of stationary digital breast tomosynthesis [9412-77]

9412 29  The impact of breast structure on lesion detection in breast tomosynthesis [9412-78]

9412 2A  Circular tomosynthesis for neuro perfusion imaging on an interventional C-arm [9412-79]

POSTER SESSION

9412 2B  NSECT sinogram sampling optimization by normalized mutual information [9412-80]

9412 2C  Feasibility study of dose reduction in digital breast tomosynthesis using non-local denoising algorithms [9412-81]

9412 2D  Virtual clinical trials using inserted pathology in clinical images: investigation of assumptions for local glandularity and noise [9412-82]

9412 2E  Region of interest processing for iterative reconstruction in x-ray computed tomography [9412-83]

9412 2F  Improving low-dose cardiac CT images using 3D sparse representation based processing [9412-84]

9412 2H  Complete optical stack modeling for CMOS-based medical x-ray detectors [9412-87]

9412 2I  Incorporating corrections for the head-holder and compensation filter when calculating skin dose during fluoroscopically guided interventions [9412-88]

9412 2J  An attempt to estimate out-of-plane lung nodule elongation in tomosynthesis images [9412-89]

9412 2K  A wire scanning based method for geometric calibration of high resolution CT system [9412-90]

9412 2L  Reduction of iodinated contrast medium in CT: feasibility study [9412-91]

9412 2N  Physics-based modeling of computed tomography systems [9412-93]

9412 2O  A novel CT-FFR method for the coronary artery based on 4D-CT image analysis and structural and fluid analysis [9412-94]

9412 2P  NVIDIA OptiX ray-tracing engine as a new tool for modelling medical imaging systems [9412-95]

9412 2Q  Feasibility of ray- and pixel-driven projector/back-projector in linear motion tomosynthesis [9412-96]

9412 2S  A rapid parallelization of cone-beam projection and back-projection operator based on texture fetching interpolation [9412-99]
Using digital subtraction in computer simulated images as a tool to aid the visual detection of masked lesions in dense breasts [9412-100]

Part Two

Optimized magnetic resonance diffusion protocol for ex-vivo whole human brain imaging with a clinical scanner [9412-101]

Convolution-based estimation of organ dose in tube current modulated CT [9412-104]

Personalized low dose CT via variable kVp [9412-105]

Dosimetry for spectral molecular imaging of small animals with MARS-CT [9412-106]

Patient specific tube current modulation for CT dose reduction [9412-107]

A real-time skin dose tracking system for biplane neuro-interventional procedures [9412-108]

A Monte Carlo study on the effect of the orbital bone to the radiation dose delivered to the eye lens [9412-109]

Analysis of uncertainties in Monte Carlo simulated organ dose for chest CT [9412-111]

A numerical investigation for the optimal positions and weighting coefficients of point dose measurements in the weighted CTDI [9412-112]

3D dosimetry estimation for selective internal radiation therapy (SIRT) using SPECT/CT images: a phantom study [9412-114]

A comparison of mammographic systems for different breast thicknesses using model observer detectability [9412-115]

Influence of DBT reconstruction algorithm on power law spectrum coefficient [9412-116]

Intrinsic noise power spectrum for the electronic noise in radiography image detectors [9412-117]

Noise performance studies of model-based iterative reconstruction (MBIR) as a function of kV, mA and exposure level: Impact on radiation dose reduction and image quality [9412-118]

Directional MTF measurement using sphere phantoms for a digital breast tomosynthesis system [9412-119]

Comparison of methods for quantitative evaluation of endoscopic distortion [9412-120]

An experimental study of the accuracy in measurement of modulation transfer function using an edge method [9412-121]
| 9412 3C | Physical performance testing of digital breast tomosynthesis [9412-122] |
| 9412 3D | Iterative CT reconstruction with small pixel size: distance-driven forward projector versus Joseph’s [9412-123] |
| 9412 3E | Application of the fractal Perlin noise algorithm for the generation of simulated breast tissue [9412-124] |
| 9412 3F | Investigating materials for breast nodules simulation by using segmentation and similarity analysis of digital images [9412-125] |
| 9412 3G | Acoustic characterization of polyvinyl chloride and self-healing silicone as phantom materials [9412-126] |
| 9412 3H | SPECT reconstruction using DCT-induced tight framelet regularization [9412-127] |
| 9412 3I | Robust iterative image reconstruction for breast CT by use of projection differentiation [9412-128] |
| 9412 3J | Adapted fan-beam volume reconstruction for stationary digital breast tomosynthesis [9412-129] |
| 9412 3K | Adaptive nonlocal means-based regularization for statistical image reconstruction of low-dose x-ray CT [9412-130] |
| 9412 3L | Performance evaluation of a novel high performance pinhole array detector module using NEMA NU-4 image quality phantom for four head SPECT Imaging [9412-131] |
| 9412 3M | A mathematical approach to image reconstruction on dual-energy computed tomography [9412-132] |
| 9412 3N | Statistical model based iterative reconstruction in myocardial CT perfusion: exploitation of the low dimensionality of the spatial-temporal image matrix [9412-133] |
| 9412 3O | Statistical iterative reconstruction for multi-contrast x-ray micro-tomography [9412-134] |
| 9412 3P | Multi-dimensional tensor-based adaptive filter (TBAF) for low dose x-ray CT [9412-136] |
| 9412 3Q | Impact of covariance modeling in dual-energy spectral CT image reconstruction [9412-137] |
| 9412 3R | Direct composite fillings: an optical coherence tomography and microCT investigation [9412-138] |
| 9412 3S | A clinical evaluation of total variation-Stokes image reconstruction strategy for low-dose CT imaging of the chest [9412-139] |
| 9412 3T | CBCT reconstruction via a penalty combining total variation and its higher-degree term [9412-140] |
| 9412 3U | Limited angle C-arm tomosynthesis reconstruction algorithms [9412-142] |
Hessian Schatten-norm regularization for CBCT image reconstruction using fast iterative shrinkage-thresholding algorithm [9412-143]

Absorption imaging performance in a future Talbot-Lau interferometer based breast imaging system [9412-145]

Comparison of CT scatter rejection effectiveness using antiscatter grids and energy-discriminating detectors [9412-146]

Evaluation of the effective focal spot size of x-ray tubes by utilizing the edge response analysis [9412-147]

Model based predictive design of post patient collimation for whole body CT scanners [9412-148]

Measurements and simulations of scatter imaging as a simultaneous adjunct for screening mammography [9412-149]

Prospective gated chest tomosynthesis using CNT x-ray source array [9412-150]

Anti-scatter grid artifact elimination for high resolution x-ray imaging CMOS detectors [9412-151]

A combination of spatial and recursive temporal filtering for noise reduction when using region of interest (ROI) fluoroscopy for patient dose reduction in image guided vascular interventions with significant anatomical motion [9412-152]

Directional information of the simultaneously active x-ray sources and fast CT reconstruction [9412-153]

A study on quality improvement of x-ray imaging of the respiratory-system based on a new image processing technique [9412-154]

Anatomy-based transmission factors for technique optimization in portable chest x-ray [9412-155]

Low dose scatter correction for digital chest tomosynthesis [9412-156]

Signal uniformity of mammography systems and its impact on test results from contrast detail phantoms [9412-157]

Signal and noise analysis of flat-panel sandwich detectors for single-shot dual-energy x-ray imaging [9412-158]

Exposure dose reduction for the high energy spectrum in the photon counting mammography: simulation study based on Japanese breast glandularity and thickness [9412-159]

Construction of realistic liver phantoms from patient images using 3D printer and its application in CT image quality assessment [9412-163]
| 9412 4F | A comparison of material decomposition techniques for dual-energy CT colonography [9412-164] |
| 9412 4G | Conditional-likelihood approach to material decomposition in spectral absorption-based or phase-contrast CT [9412-165] |
| 9412 4I | Model based iterative reconstruction IMR gives possibility to evaluate thinner slice thicknesses than conventional iterative reconstruction iDose4: a phantom study [9412-168] |
| 9412 4J | Evaluation of imaging characteristics in CTDI phantom size on contrast imaging [9412-169] |
| 9412 4K | Scatter correction of vessel dropout behind highly attenuating structures in 4D-DSA [9412-170] |
| 9412 4L | Region-of-interest cone beam computed tomography (ROI CBCT) with a high resolution CMOS detector [9412-171] |
| 9412 4M | Volume-of-interest reconstruction from severely truncated data in dental cone-beam CT [9412-172] |
| 9412 4N | Implementation of interior micro-CT on a carbon nanotube dynamic micro-CT scanner for lower radiation dose [9412-173] |
| 9412 4O | Comparison of cone beam artifacts reduction: two pass algorithm vs TV-based CS algorithm [9412-174] |
| 9412 4P | A new multi-planar reconstruction method using voxel based beamforming for 3D ultrasound imaging [9412-175] |
| 9412 4Q | Non-invasive thermal IR detection of breast tumor development in vivo (Best Poster Award) [9412-176] |
| 9412 4R | Slice profile distortions in single slice continuously moving table MRI [9412-177] |
| 9412 4T | Investigation of optimal acquisition time of myocardial perfusion scintigraphy using cardiac focusing-collimator [9412-180] |
| 9412 4V | Modeling CZT/CdTe x-ray photon-counting detectors [9412-182] |
| 9412 4W | Statistical bias in material decomposition in low photon statistics region [9412-183] |
| 9412 4X | Reducing the formation of image artifacts during spectroscopic micro-CT acquisitions [9412-184] |
| 9412 4Y | Investigation of a one-step spectral CT reconstruction algorithm for direct inversion into basis material images [9412-185] |
| 9412 4Z | A photon counting detector model based on increment matrices to simulate statistically correct detector signals [9412-186] |
| 9412 50 | Photon-counting CT: modeling and compensating of spectral distortion effects [9412-187] |
On filtration for high-energy phase-contrast x-ray imaging [9412-188]

Single-step, quantitative x-ray differential phase contrast imaging using spectral detection in a coded aperture setup [9412-189]

Practicable phase contrast techniques with large spot sources [9412-191]

Statistical estimation of the directional dependency of subject in visibility-contrast imaging with the x-ray Talbot-Lau interferometer [9412-192]

The quantitative evaluation of the correlation between the magnification and the visibility-contrast value [9412-193]

Complex dark-field contrast in grating-based x-ray phase contrast imaging [9412-194]

Improving depth resolution in digital breast tomosynthesis by iterative image reconstruction [9412-195]

Physical characterization of photon-counting tomosynthesis [9412-196]

Metal artifact reduction in tomosynthesis imaging [9412-197]

Distance driven back projection image reconstruction in digital tomosynthesis [9412-198]

Detection of lung nodules in chest digital tomosynthesis (CDT): effects of the different angular dose distribution [9412-199]

Evaluation of effective dose with chest digital tomosynthesis system using Monte Carlo simulation [9412-200]

Optimization of a coded aperture coherent scatter spectral imaging system for medical imaging [9412-201]

Concept and setup for intraoperative imaging of tumorous tissue via Attenuated Total Reflection spectroscopy with Quantum Cascade Lasers [9412-202]

Scatter-free breast imaging using a monochromator coupled to a pixellated spectroscopic detector [9412-203]

Comparison of two CDMAM generations with respect to dose sensitivity [9412-204]

Dose and image quality measurements for contrast-enhanced dual energy mammography systems [9412-205]

Method for inserting noise in digital mammography to simulate reduction in radiation dose [9412-206]

Relationship between radiation dose and reduced x-ray sensitivity surrounding breast region using CR stimulable phosphor plate for mammography [9412-207]

Physics of a novel magnetic resonance and electrical impedance combination for breast cancer diagnosis (Best Poster Award) [9412-208]
Dual-energy (MV/kV) CT with probabilistic attenuation mapping for IGRT applications [9412-210]

Interventional C-arm tomosynthesis for vascular imaging: initial results [9412-211]

Usefulness of an energy-binned photon-counting x-ray detector for dental panoramic radiographs [9412-212]
Authors

Numbers in the index correspond to the last two digits of the six-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Proc. of SPIE Vol. 9412  941201-17
Conference Committee

Symposium Chairs

David J. Manning, Lancaster University (United Kingdom)
Steven C. Horii, The University of Pennsylvania Health System (United States)

Conference Chairs

Christoph Hoeschen, Helmholtz Zentrum München GmbH (Germany)
and Otto-von-Guericke Universität Magdeburg (Germany)
Despina Kontos, The University of Pennsylvania Health System (United States)

Conference Co-chair

Thomas G. Flohr, Siemens AG (Germany)

Conference Program Committee

Andreu Badal, U.S. Food and Drug Administration (United States)
Kirsten Boedeker, Toshiba Medical Research Institute USA (United States)
Hilde Bosmans, Katholieke Universiteit Leuven (Belgium)
Guang-Hong Chen, University of Wisconsin-Madison (United States)
Mini Das, University of Houston (United States)
Mats E. Danielsson, KTH Royal Institute of Technology (Sweden)
Maria Drangova, Robarts Research Institute (Canada)
Rebecca Fahrig, Stanford University School of Medicine (United States)
Taly Gilat-Schmidt, Marquette University (United States)
Stephen J. Glick, University of Massachusetts Medical School (United States)
Michael Grass, Philips Research (Germany)
Marc Kachelrieß, Deutsches Krebsforschungszentrum (Germany)
Karim S. Karim, University of Waterloo (Canada)
Hee-Joung Kim, Yonsei University (Korea, Republic of)
Joseph Y. Lo, Duke University Medical Center (United States)
Robert M. Nishikawa, University of Pittsburgh (United States)
Jinyi Qi, University of California, Davis (United States)
Magdalena Rafecas, Instituto de Física Corpuscular (Spain)
John A. Rowlands, Thunder Bay Regional Research Institute (Canada)
John M. Sabol, GE Healthcare (United States)
Anders Tingberg, Lund University (Sweden)
Session Chairs

1. Physics of Contrast Enhancement
   Christoph Hoeschen, Helmholtz Zentrum München GmbH (Germany)
   and Otto-von-Guericke Universität Magdeburg (Germany)
   John Yorkston, Carestream Health, Inc. (United States)

2. Image Reconstruction
   Kirsten Boedeker, Toshiba Medical Research Institute USA (United States)
   Stephen J. Glick, University of Massachusetts Medical School (United States)

3. Detector Technology
   Karim S. Karim, University of Waterloo (Canada)
   Wei Zhao, Stony Brook Medicine (United States)

4. Phase Contrast Imaging
   John M. Sabol, GE Healthcare (United States)
   Bruce R. Whiting, University of Pittsburgh (United States)

5. Algorithmic Developments
   Hee-Joung Kim, Yonsei University (Korea, Republic of)
   Taly Gilat Schmidt, Marquette University (United States)

6. Computed Tomography I
   Rebecca Fahrig, Stanford School of Medicine (United States)
   Thomas G. Flohr, Siemens AG (Germany)

7. Photon Counting Imaging
   Marc Kachelriess, Deutsches Krebsforschungszentrum (Germany)
   Mats E. Danielsson, KTH Royal Institute of Technology (Sweden)

8. Keynote and Novel Imaging Technologies
   Guang-Hong Chen, University of Wisconsin-Madison (United States)
   Christoph Hoeschen, Helmholtz Zentrum München GmbH (Germany)
   and Otto-von-Guericke Universität Magdeburg (Germany)

9. Measurements, Phantoms, Simulations
   Stephen J. Glick, University of Massachusetts Medical School (United States)
   Robert M. Nishikawa, University of Pittsburgh (United States)
10 Breast Imaging
   Hilde Bosmans, Katholieke Universiteit Leuven (Belgium)
   Hee-Joung Kim, Yonsei University (Korea, Republic of)

11 Radiation Dose and Dosimetry
   Bruce R. Whiting, University of Pittsburgh (United States)
   Wei Zhao, Stony Brook Medicine (United States)

12 Performance Evaluation
   Joseph Y. Lo, Duke University School of Medicine (United States)
   Wei Zhao, Stony Brook Medicine (United States)

13 X-Ray Imaging
   Rebecca Fahrig, Stanford School of Medicine (United States)
   Mini Das, University of Houston (United States)

14 Computed Tomography II
   Marc Kachelriess, Deutsches Krebsforschungszentrum (Germany)
   Thomas G. Flohr, Siemens AG (Germany)

15 Tomosynthesis
   Despina Kontos, The University of Pennsylvania Health System (United States)
   Anders Tingberg, Lund University (Sweden)
2015 Medical Imaging Award Recipients

Robert F. Wagner Best Student Paper Award

Robert F. Wagner was an active scientist in the SPIE Medical Imaging meeting, starting with the first meeting in 1972 and continuing throughout his career. He ensured that the BRH, and subsequently the CDRH, was a sponsor for the early and subsequent Medical Imaging meetings, helping to launch and ensure the historical success of the meeting. The Robert F. Wagner All-Conference Best Student Paper Award (established 2014) is acknowledgment of his many important contributions to the Medical Imaging meeting and his many important advances to the field of medical imaging.

This award is cosponsored by:

The Medical Image Perception Society

SPIE

2015 Recipients:

First Place: Automatic discrimination of color retinal images using the bag of words approach (9414-54)
I. Sadek, D. Sidibé, F. Meriaudeau, Univ. of Burgundy (France)

Second Place: Automated pulmonary lobar ventilation measurements using volume-matched thoracic CT and MRI (9417-42)
F. Guo, S. Svenningsen, E. Bluemke, M. Rajchl, J. Yuan, A. Fenster, G. Parraga, The Univ. of Western Ontario (Canada)
