Publication of record for individual papers is online in the SPIE Digital Library.

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print. Papers are published as they are submitted and meet publication criteria. A unique citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID Number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages.

Contents

vii	<i>Authors</i>
ix	<i>Conference Committee</i>
xi	<i>Introduction</i>
xv	<i>2015 Medical Imaging Award Recipients</i>

SESSION 1 KEYNOTE AND TRENDS

9420 03	Segmentation of digitized histological sections for vasculature quantification in the mouse hind limb [9420-2]
9420 04	Structure preserving color deconvolution for immunohistochemistry images [9420-3]

SESSION 2 EMERGING APPLICATIONS

9420 05	Anisotropic tubular filtering for automatic detection of acid-fast bacilli in Ziehl-Neelsen stained sputum smear samples [9420-4]
9420 06	Aging display's effect on interpretation of digital pathology slides [9420-5]
9420 07	An adaptive algorithm for detection of multiple-type, positively stained nuclei in IHC images with minimal prior information: application to OLIG2 staining gliomas [9420-6]
9420 08	Characterizing primary refractory neuroblastoma: prediction of outcome by microscopic image analysis [9420-7]
9420 09	Confocal fluorescence microscopy for detection of cervical preneoplastic lesions [9420-8]
9420 0A	Computer assisted detection and analysis of tall cell variant papillary thyroid carcinoma in histological images [9420-9]

SESSION 3 GASTRO-INTESTINAL/GENITO-URINARY

9420 0B	Automated detection of prostate cancer in digitized whole-slide images of H&E-stained biopsy specimens [9420-10]
9420 0D	Inter-observer variability in the classification of ovarian cancer cell type using microscopy: a pilot study [9420-12]
9420 0E	Integration of co-localized glandular morphometry and protein biomarker expression in immunofluorescent images for prostate cancer prognosis [9420-13]

- 9420 OF **Toward automatic segmentation and quantification of tumor and stroma in whole-slide images of H&E stained rectal carcinomas [9420-14]**

SESSION 4 BREAST

- 9420 OG **Automatic glandular and tubule region segmentation in histological grading of breast cancer [9420-15]**
- 9420 OH **A multi-scale superpixel classification approach to the detection of regions of interest in whole slide histopathology images [9420-16]**
- 9420 OI **High-definition Fourier transform infrared spectroscopic imaging of breast tissue [9420-17]**
- 9420 OJ **Multi-class stain separation using independent component analysis [9420-18]**
- 9420 OK **Minimum slice spacing required to reconstruct 3D shape for serial sections of breast tissue for comparison with medical imaging [9420-19]**
- 9420 OL **Color model comparative analysis for breast cancer diagnosis using H&E stained images [9420-20]**

POSTER SESSION

- 9420 OM **Performance assessment of automated tissue characterization for prostate H&E stained histopathology [9420-21]**
- 9420 ON **Nucleus detection using gradient orientation information and linear least squares regression [9420-22]**
- 9420 OO **Toward consistent cell segmentation: quality assessment of cell segments via appearance and geometry features [9420-23]**
- 9420 OP **Adaptive whole slide tissue segmentation to handle inter-slide tissue variability [9420-24]**
- 9420 OQ **A novel spectral imaging system for use during pancreatic cancer surgery [9420-25]**
- 9420 OR **Detection of high-grade atypia nuclei in breast cancer imaging [9420-26]**
- 9420 OS **A novel texture descriptor for detection of glandular structures in colon histology images [9420-27]**
- 9420 OT **A circumscribing active contour model for delineation of nuclei and membranes of megakaryocytes in bone marrow trephine biopsy images [9420-28]**
- 9420 OU **Success of digitizing the dept. of pathology: is it just to change the technical platform and go with the slide scanners or do we need a paradigm when it comes to informatics and workflow? [9420-29]**

- 9420 0V **Uncertainty in the assessment of immunohistochemical staining with optical and digital microscopy: lessons from a reader study** [9420-30]
- 9420 0W **Improved segmentation of abnormal cervical nuclei using a graph-search based approach** [9420-31]
- 9420 0X **An automated approach to improve efficacy in detecting residual malignant cancer cell for facilitating prognostic assessment of leukemia: an initial study** [9420-32]
- 9420 0Y **An accurate method of extracting fat droplets in liver images for quantitative evaluation (Cum Laude Poster Award)** [9420-33]
- 9420 0Z **Multi-stained whole slide image alignment in digital pathology** [9420-35]
- 9420 10 **Automatic choroid cells segmentation and counting based on approximate convexity and concavity of chain code in fluorescence microscopic image** [9420-36]
- 9420 11 **Detecting cells in time varying intensity images in confocal microscopy for gene expression studies in living cells** [9420-37]

Authors

Numbers in the index correspond to the last two digits of the six-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Martin J. Yaffe, Sunnybrook Research Institute (Canada)
Bülent Yener, Rensselaer Polytechnic Institute (United States)

Session Chairs

- 1 Keynote and Trends
Metin N. Gurcan, The Ohio State University Wexner Medical Center
(United States)
Anant Madabhushi, Case Western Reserve University (United States)
- 2 Emerging Applications
Elizabeth A. Krupinski, The University of Arizona (United States)
- 3 Gastro-Intestinal/Genito-Urinary
John E. Tomaszewski, State University of New York at Buffalo
(United States)
- 4 Breast
Ulysses J. Balis, University of Michigan Health System (United States)

Tuesday/Wednesday Posters

Anne L. Martel, Sunnybrook Research Institute (Canada)

Introduction

In 2013, we introduced a new conference, Digital Pathology, at the SPIE Medical Imaging Symposium in Orlando, Florida. This year continued to see the same sort of attention that made digital pathology one of the prominent conferences at the SPIE Medical Imaging Symposium both in 2013 and in 2014. The quality of the presented talks, posters and the resulting papers (just like last year and the year before) continued to be outstanding. While in 2015 we saw a marginal decrease in the total number of submissions, a rigorous peer-review process ensured that only the top papers were selected for presentation at the meeting.

The third Digital Pathology conference took place on February 24th, 25th and 26th in the Renaissance Orlando at SeaWorld, Orlando, Florida. The meeting began on the evening of the 24th with a workshop entitled *Power of pathology: predicting disease aggressiveness from tissue slides* with expert pathologists Drs. John Tomaszewski (University of Buffalo), Ulysses Balis (University of Michigan), and Hannah Gilmore (Case Western Reserve University). This workshop built on the success of a related workshop entitled *What do pathologists see on a slide: Implications for Digital Pathology* in the 2014 version of the digital pathology meeting, which drew over 50 attendees. However, unlike the 2014 workshop that was intended as a "Pathology 101" for the SPIE Medical imaging audience, the 2015 workshop challenged our expert panel to not just diagnose the presence of the disease on the slide, but to also predict the aggressiveness of the disease and risk. The workshop began with an excellent review of breast cancer pathology and histopathology slide preparation by Dr. Hannah Gilmore. Subsequently each of our expert pathologists each reviewed a pathology slide corresponding to a different patient diagnosed with estrogen receptor positive breast cancer. Following a didactic presentation of pathologic features identified on the image, each pathologist was asked to make a call on what the level of risk might be (low, intermediate or high). The risk predictions made by the pathologists based off the pathologic attributes were then compared against those obtained by a 21 gene expression assay called Oncotype DX. In every case the predictions by the pathologist concurred with that obtained from the Oncotype DX test, revealing the ability of the pathologists to predict disease risk based off analysis of routine H&E pathology slides alone. The workshop ended with a very lively interactive Q&A session between the audience and our expert panel of pathologists.

The meeting formally began on February 25th with a plenary talk given by Dr. Ulysses Balis entitled *Twenty years of image-based search technology in review: bright prospects for image-based search and decision support in whole slide imaging*. Dr. Balis, a pathologist with an interest in computational image analysis, discussed work from his group on developing very powerful image-based search algorithms that could be applied to identifying most similar pathology images within large repositories when compared to a query image. Dr. Balis discussed how the image-based search algorithm (called SiVQ) could be used to predict patient

outcome by comparing a query image with similar images in a database that have a known patient outcome. The keynote talk drew in over 200 attendees from all the various conferences as part of the SPIE Medical imaging symposium and resulted in some very lively discussion following the talk. The rest of the conference was similarly very heavily subscribed.

A total of 36 papers were presented during the course of the meeting in both oral and poster form. The presentations were aggregated into three thematic areas covering Emerging Applications, Gastro-Intestinal/Genito-Urinary and Breast. We would like to acknowledge the excellent work in the following papers:

Conference finalist of the Robert F. Wagner Best Student Paper Award for Digital Pathology

Segmentation of digitized histological sections for vasculature quantification in the mouse hind limb

Paper 9420-2

Student Author: Yiwen Xu, Robarts Research Institute (Canada)

Author(s): Yiwen Xu, The Univ. of Western Ontario (Canada); J. Geoffery Pickering, Zengxuan Nong, Robarts Research Institute (Canada); Aaron D. Ward, The Univ. of Western Ontario (Canada)

Poster Awards

Cum Laude Poster Award

An accurate method of extracting fat droplets in liver images for quantitative evaluation

Paper 9420-33

Author(s): Masahiro Ishikawa, Naoki Kobayashi, Hideki Komagata, Kazuma Shinoda, Saitama Medical Univ. (Japan); Masahiro Yamaguchi, Tokyo Institute of Technology (Japan); Tokiya Abe, Akinori Hashiguchi, Michiie Sakamoto, Keio Univ. (Japan)

Honorable Mention Poster Award

An automated approach to improve efficacy in detecting residual malignant cancer cell for facilitating prognostic assessment of leukemia: an initial study

Paper 9420-32

Author(s): Yuchen Qiu, The Univ. of Oklahoma (USA); Xianglan Lu, The Univ. of Oklahoma Health Sciences Ctr. (USA); Maxine Tan, The Univ. of Oklahoma (USA); Shibo Li, The Univ. of Oklahoma Health Sciences Ctr. (USA); Hong Liu, Bin Zheng, The Univ. of Oklahoma (USA)

The continued success of the new Digital Pathology conference was in no small part to the outstanding efforts of the program committee, who carefully constructed the program, SPIE Conference Chairs Drs. David Manning and Steven Horii, and SPIE staff, who kindly guided us through all the steps of the program organization.

Next year, the Digital Pathology conference at SPIE Medical Imaging will take place in San Diego, California. We look forward to seeing you there for another successful conference.

Anant Madabhushi

2015 Medical Imaging Award Recipients

Robert F. Wagner Best Student Paper Award

Robert F. Wagner was an active scientist in the SPIE Medical Imaging meeting, starting with the first meeting in 1972 and continuing throughout his career. He ensured that the BRH, and subsequently the CDRH, was a sponsor for the early and subsequent Medical Imaging meetings, helping to launch and ensure the historical success of the meeting. The Robert F. Wagner All-Conference Best Student Paper Award (established 2014) is acknowledgment of his many important contributions to the Medical Imaging meeting and his many important advances to the field of medical imaging.

This award is cosponsored by:

The Medical Image Perception Society

SPIE[®]

2015 Recipients:

First Place: **Automatic discrimination of color retinal images using the bag of words approach** (9414-54)

I. Sadek, D. Sidibé, F. Meriaudeau, Univ. of Burgundy (France)

Second Place: **Automated pulmonary lobar ventilation measurements using volume-matched thoracic CT and MRI** (9417-42)

F. Guo, S. Svenningsen, E. Bluemke, M. Rajchl, J. Yuan, A. Fenster, G. Parraga, The Univ. of Western Ontario (Canada)

Conference Awards

2015 Recipients:

Cum Laude Poster Award: **An accurate method of extracting fat droplets in liver images for quantitative evaluation** [9420-33]

M. Ishikawa, N. Kobayashi, H. Komagata, K. Shinoda, Saitama Medical Univ. (Japan); M. Yamaguchi, Tokyo Institute of Technology (Japan); T. Abe, A. Hashiguchi, M. Sakamoto, Keio Univ. (Japan)
