Publication of record for individual papers is online in the SPIE Digital Library.

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print. Papers are published as they are submitted and meet publication criteria. A unique citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID Number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages.

Contents

v	<i>Authors</i>
vii	<i>Conference Committee</i>
ix	<i>Introduction</i>

PERCEPTION AND HUMAN ROBOT INTERACTION

9468 02	Multi-modal interaction for UAS control [9468-1]
9468 03	A novel method for full position and angular orientation measurement of moving objects [9468-2]
9468 05	Natural interaction for unmanned systems [9468-4]
9468 06	Fusion of lidar and radar for detection of partially obscured objects [9468-5]

ROBOTICS CTA

9468 08	Motion compensation for structured light sensors [9468-7]
9468 09	Active dictionary learning for image representation [9468-8]
9468 0A	RCTA capstone assessment [9468-9]
9468 0B	Semi-autonomous exploration of multi-floor buildings with a legged robot [9468-10]
9468 0C	Toward agile control of a flexible-spine model for quadruped bounding [9468-11]

SELF-ORGANIZING, COLLABORATIVE UNMANNED ISR TEAMS II: JOINT SESSION WITH CONFERENCES 9479 AND 9468

9468 0D	UAV field demonstration of social media enabled tactical data link [9468-12]
9468 0E	Fuel cell powered small unmanned aerial systems (UASs) for extended endurance flights [9468-13]
9468 0F	Tactical 3D model generation using structure-from-motion on video from unmanned systems [9468-14]
9468 0G	Aircraft path planning for optimal imaging using dynamic cost functions [9468-15]
9468 0H	Cloud-based distributed control of unmanned systems [9468-16]

SPECIAL TOPICS

- 9468 OJ **Research for a multi-modal mobility and manipulation propulsion core** [9468-18]
- 9468 OK **Automatic behavior sensing for a bomb-detecting dog** [9468-19]
- 9468 OL **Trust-based learning and behaviors for convoy obstacle avoidance** [9468-20]
- 9468 OM **Cybersecurity for aerospace autonomous systems** [9468-21]
- 9468 ON **Design and experimental validation of a simple controller for a multi-segment magnetic crawler robot** [9468-22]

POSTER SESSION

- 9468 OP **Open Space Box: communication to support Big Data in orbit** [9468-24]
- 9468 OR **System and mathematical modeling of quadroter dynamics** [9468-27]
- 9468 OS **Establishing a disruptive new capability for NASA to fly UAV's into hazardous conditions**
[9468-28]

Authors

Numbers in the index correspond to the last two digits of the six-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Conference Committee

Symposium Chair

Nils R. Sandell Jr., Strategic Technology Office, DARPA
(United States)

Symposium Co-chair

David A. Logan, BAE Systems (United States)

Conference Chairs

Robert E. Karlsen, U.S. Army Tank Automotive Research, Development
and Engineering Center (United States)

Douglas W. Gage, XPM Technologies (United States)

Charles M. Shoemaker, U.S. Army Communications-Electronics
Research Development and Engineering Command
(United States)

Grant R. Gerhart, U.S. Army Tank-Automotive Research, Development,
and Engineering Center-Retired (United States)

Conference Program Committee

Jonathan A. Bornstein, U.S. Army Research Laboratory (United States)

Jared Giesbrecht, Defence Research and Development Canada,
Suffield (Canada)

Frank L. Lewis, The University of Texas at Arlington (United States)

Larry H. Matthies, Jet Propulsion Laboratory (United States)

Camille S. Monnier, Charles River Analytics, Inc. (United States)

Paul L. Muench, U.S. Army Tank Automotive Research, Development
and Engineering Center (United States)

Hoa G. Nguyen, Space and Naval Warfare Systems Center Pacific
(United States)

James L. Overholt, Air Force Research Laboratory (United States)

Mike Perschbacher, RovnoTech (United States)

Anthony Stentz, Carnegie Mellon University (United States)

Gary Witus, Turing Associates, Inc. (United States)

Brian M. Yamauchi, iRobot Corporation (United States)

Session Chairs

- 1 Perception and Human Robot Interaction
Camille S. Monnier, Charles River Analytics, Inc. (United States)
Hoa G. Nguyen, Space and Naval Warfare Systems Center Pacific (United States)
- 2 Robotics CTA
Jonathan A. Bornstein, U.S. Army Research Laboratory (United States)
Dilip G. Patel, General Dynamics Robotic Systems (United States)
- 3 Self-organizing Collaborative Unmanned ISR Teams I: Joint session with Conferences 9479 and 9468
Raja Suresh, General Dynamics Advanced Information Systems (United States)
Robert E. Karlsen, U.S. Army Tank Automotive Research, Development and Engineering Center (United States)
- 4 Self-organizing, Collaborative Unmanned ISR Teams II: Joint session with conferences 9479 and 9468
Raja Suresh, General Dynamics Advanced Information Systems (United States)
Robert E. Karlsen, U.S. Army Tank Automotive Research, Development and Engineering Center (United States)
- 5 Special Topics
Douglas W. Gage, XPM Technologies (United States)
Charles M. Shoemaker, U.S. Army Communications-Electronics Research Development and Engineering Command (United States)
- 6 MAST: Bio-inspired Control: Joint Session with Conferences 9467, 9468, 9479
Christopher M. Kroninger, U.S. Army Research Laboratory (United States)
William D. Nothwang, U.S. Army Research Laboratory (United States)
- 7 MAST: Scale Legged Locomotion: Joint Session with Conferences 9467, 9468, 9479
Christopher M. Kroninger, U.S. Army Research Laboratory (United States)
William D. Nothwang, U.S. Army Research Laboratory (United States)

Introduction

The Unmanned Systems Technology XVII conference consisted of seven sessions that spanned two days and covered a variety of areas within robotics. The conference table of contents shows the various applications of unmanned systems, and the trend is predicted to increase. This year's conference also shows that, while there is still interest in the standard unmanned technologies, there is also great interest in other forms of robotics, such as micro air vehicles, which are becoming very ubiquitous in terms of commercial availability and capability.

The conference began Tuesday afternoon with a session on Perception and Human Robot Interaction, from which we have two papers that detailed research efforts into multimodal input to robotic systems, which in these cases were speech and drawing. On the Perception side, we received a paper on a method for measuring the angular orientation of a projectile using a polarized RF source, as well as a paper researching the fusion of two common robot sensing modalities (lidar and radar) to detect partially obscured objects.

The late afternoon session on Tuesday was devoted to the Army Research Laboratory's (ARL) Robotics Collaborative Technology Alliance (CTA), where papers were presented on a variety of subjects, including a novel method for performing background subtraction from moving structured light sensors, a batch streaming method for K-SVD dictionary learning, a discussion of the RCTA capstone experiment that involved semantic perception and navigation, the exploration of a multi-floor building using the legged robot RHex, and planar modeling of the bounding gait of a quadruped robot with a flexible spine.

Wednesday afternoon began with a session on Self-organizing Collaborative Unmanned ISR Teams that was joint with conference 9479, Open Architecture/Open Business Model Net-Centric Systems and Defense Transformation 2015. The first paper of the session discussed a method to control an unmanned aerial vehicle via commands sent through social media sites and the cellular phone network. Other papers discuss the generation of 3D models using structure-from-motion (SfM) software for object detection and for path planning for radiation survey aircraft, as well as the development of a cloud-based architecture for the command and control of unmanned systems.

Wednesday concluded with the Special Topics session that resulted in a potpourri of papers, including the development of an eight-rotor air vehicle with manipulation capability, a data capture system integrated into the collar of a bomb-sniffing dog, the use of a nearest neighbor trust algorithm to control the vehicles in a convoy, and the development of a crawling robot that uses magnetic wheels to maneuver around metallic surfaces.

The main conference concluded Thursday morning with a pair of joint sessions with Conference 9467, Micro- and Nanotechnology Sensors, Systems, and Applications VII, consisting of work performed under ARL's Micro-Autonomous Systems and Technology (MAST) CTA. The first session focused on control algorithms, and the papers described experimental analysis of optical flow techniques and their use for air-vehicle gust rejection, as well as a method to allow faster driving in unknown environments. The second session involved legged robot research, with papers exploring bio-inspired energy storage and redirection, experimental analysis of methods for steering legged robots, quantifying performance of a biped in terms of robustness versus agility, experiments in terrain locomotion and obstacle negotiation, and modeling efforts for legged locomotion.

The conference's poster session took place on Thursday night with papers on a communication architecture for small satellites, modeling of a quadrotor, and a discussion on building an unmanned air vehicle for gathering information from within storms and other hazardous conditions. The session was well attended and the posters sparked a considerable amount of discussion.

This year's conference once again covered a variety of unmanned systems technologies and demonstrated why robotics is such an interesting and exciting area to work in. We want to thank all those that helped make the conference a success this year, and we hope that you enjoy these proceedings and are able to attend and participate in next year's conference.
