Volume 9525

Proceedings of SPIE 0277-786X, V. 9525

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Optical Measurement Systems for Industrial Inspection IX, edited by Peter Lehmann,
Wolfgang Osten, Armando Albertazzi G. Jr., Proc. of SPIE Vol. 9525, 952501
© 2015 SPIE · CCC code: 0277-786X/15/\$18 · doi: 10.1117/12.2197953

Proc. of SPIE Vol. 9525 952501-1

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print. Papers are published as they are submitted and meet publication criteria. A unique citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID Number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages.

Contents

Part One

xi	<i>Authors</i>
xv	<i>Conference Committee</i>
xix	<i>Introduction</i>

SESSION 1	RESOLUTION-ENHANCED TECHNIQUES
9525 02	Ultra-precision optical metrology using highly controlled fiber-based frequency combs (Invited Paper) [9525-1]
9525 03	Deterministic phase retrieval employing spherical illumination [9525-2]
9525 04	Digital super-resolution microscopy using example-based algorithm [9525-3]
9525 06	3D optical metrology and super-resolution microscopy with structured illumination based on QXGA (2048×1536) resolution [9525-135]
SESSION 2	INTERFEROMETRIC TECHNIQUES
9525 07	Dual spectrally resolved interferometry to improve measurement range [9525-6]
9525 08	Full-field and contact-less topography of nanometric thin films based on multiwavelength interferometry [9525-7]
9525 09	Novel dispersion tolerant interferometry method for accurate measurements of displacement [9525-8]
9525 0B	Spatial-frequency analysis algorithm for in-situ measurement of wavefront [9525-10]
SESSION 3	OCT AND FIBER SENSORS
9525 0F	Robust fiber optic flexure sensor exploiting mode coupling in few-mode fiber [9525-14]
9525 0H	Distributed fiber optic sensor employing phase generate carrier for disturbance detection and location [9525-16]

SESSION 4	DIGITAL HOLOGRAPHY
9525 0I	Resolution enhancement in phase imaging by using modulated illumination (Invited Paper) [9525-169]
9525 0J	Sparsity promoting automatic focusing in digital holography [9525-18]
9525 0K	Holographic position measurements of an optically trapped nanoparticle [9525-19]
9525 0L	Color holograms synthesis framework for three-dimensional scene reconstruction [9525-20]
9525 0M	Off-axis illumination in object-rotation diffraction tomography for enhanced alignment and resolution [9525-21]
SESSION 5	WHITE-LIGHT INTERFEROMETRY
9525 0N	A new class of wide-field objectives for 3D interference microscopy [9525-22]
9525 0O	Interferometric measuring system for cone inspection on shop-floor level [9525-23]
9525 0P	Cross-linking characterization of polymers based on their optical dispersion utilizing a white-light interferometer [9525-24]
9525 0Q	Robust vertical scanning white-light interferometry in close-to-machine applications [9525-25]
9525 0R	Development of a compact low coherence interferometer based on GPGPU for fast microscopic surface measurement on turbine blades [9525-26]
SESSION 6	SPECKLE AND SHEARING INTERFEROMETRY
9525 0T	Robust speckle metrology for stress measurements outside the lab (Invited Paper) [9525-28]
9525 0U	Reduction of phase singularities in speckle-shearing interferometry by incoherent averaging of speckle patterns [9525-29]
9525 0V	Bending stress determination in pipes using a radial in-plane digital speckle pattern interferometer combined with instrumented indentation [9525-30]
9525 0W	Influence of error sources in speckle interferometry using only two speckle patterns [9525-31]
9525 0X	A calibration method of self-referencing interferometry based on maximum likelihood estimation [9525-32]

SESSION 7	CONFOCAL AND WLI TECHNIQUES
9525 0Y	Multiplex acquisition approach for high speed 3D measurements with a chromatic confocal microscope [9525-33]
9525 0Z	Multi-scale roughness measurement of cementitious materials using different optical profilers and window resizing analysis [9525-34]
9525 10	Calibration of z-axis linearity for arbitrary optical topography measuring instruments [9525-163]
9525 11	Surface topography measurement based on color images processing in white light interferometry [9525-36]
SESSION 8	FRINGE PROJECTION AND 3D IMAGING
9525 12	Automatic complete high-precision optical 3D measurement of air cooling-holes of gas turbine vanes for repair [9525-37]
9525 13	Endoscopic fringe projection for in-situ inspection of a sheet-bulk metal forming process [9525-38]
9525 14	Long wave infrared 3D scanner [9525-39]
9525 15	Experimental comparison of laser speckle projection and array projection for high-speed 3D measurements [9525-40]
9525 16	Development of a photogrammetry system for the measurement of rotationally symmetric forgings [9525-41]
SESSION 9	DEFLECTOMETRY
9525 18	Temporal modulated deflectometry for painted surface inspection [9525-43]
SESSION 10	JOINT SESSION I: MEASUREMENT OF OPTICAL COMPONENTS AND SYSTEMS
9525 1B	Never-ending struggles with mid-spatial frequencies (Invited Paper) [9525-47]
9525 1D	Overview of characterization and metrology techniques for microlenses and microlens arrays [9525-49]
SESSION 11	JOINT SESSION II: MEASUREMENT OF OPTICAL COMPONENTS AND SYSTEMS
9525 1F	Traceability in interferometric form metrology (Invited Paper) [9525-51]
9525 1K	Point diffraction interferometry based on the use of two pinholes [9525-56]

SESSION 12 3D SHAPE, DISPLACEMENT, AND DEFORMATION MEASUREMENT

- 9525 1L **Speckle interferometry in the long-wave infrared for combining holography and thermography in a single sensor: applications to nondestructive testing: The FANTOM Project (Invited Paper)** [9525-57]
- 9525 1M **Problems and solutions in measurements of engineering objects by means of digital image correlation** [9525-58]
- 9525 1N **Objective speckle displacement resulting from the deformation of shaped objects** [9525-59]
- 9525 1O **Optical system for the calibration and verification of correct axis positioning in medium-big sized milling boring machines** [9525-60]
- 9525 1P **Modified coherent gradient sensing method for slope measurement of reflective surfaces** [9525-61]

SESSION 13 NONDESTRUCTIVE TESTING AND IN-PROCESS MEASUREMENT

- 9525 1R **Optical detection of mixture ratios and impurities in viscous materials based on fluorescence imaging** [9525-63]
- 9525 1S **Expanded beam spectro-ellipsometry for big area on-line monitoring** [9525-64]
- 9525 1T **Additive manufacturing: a new approach for individualized optical shape metrology** [9525-65]
- 9525 1U **3D shape measurements with a single interferometric sensor for in-situ lathe monitoring** [9525-66]
- 9525 1V **Ultrafast 2K line-scan sensor for industrial inspection applications** [9525-67]
- 9525 1W **Monitoring deformations of industrial objects using optical-electronic autoreflection system** [9525-68]

SESSION 14 VIBRATION MEASUREMENT

- 9525 1X **High-speed digital in-line holography as multipoint vibrometry to analyze vibrations of structures** [9525-69]
- 9525 1Y **Ultracompact vibrometry measurement with nanometric accuracy using optical feedback** [9525-70]
- 9525 1Z **Evaluation of the vibrational behaviour of a rotating disk by optical tip-clearance measurements** [9525-71]
- 9525 20 **Simultaneous laser vibrometry on multiple surfaces with a single beam system using range-resolved interferometry** [9525-72]

- 9525 21 **Multi-point laser coherent detection system and its application on vibration measurement** [9525-73]

SESSION 15 DEFECT DETECTION

- 9525 22 **Realistic simulation of camera images of local surface defects in the context of multi-sensor inspection systems** [9525-74]
- 9525 23 **Discrete modal decomposition for surface appearance modelling and rendering** [9525-75]
- 9525 25 **Using speckle images correlation for real-time inspection of fatigue crack initiation and propagation** [9525-77]
- 9525 26 **Smart optical distance sensor for automatic welding detection** [9525-35]

Part Two

POSTER SESSION

- 9525 28 **Wafer warpage characterization measurement with modified fringe reflection method** [9525-46]
- 9525 2A **Application of high-accuracy laser Doppler velocimeter in self-contained navigation** [9525-79]
- 9525 2B **Design of photonics crystal fiber sensors for bio-medical applications** [9525-80]
- 9525 2C **In-line polariscopic checking of plastic molded-injected lenses: preliminary results** [9525-81]
- 9525 2D **Dimensional field testing of an optical measurement system in a long-span suspension bridge** [9525-82]
- 9525 2E **Principal component analysis based carrier removal approach for Fourier transform profilometry** [9525-83]
- 9525 2F **Transparent layer thickness measurement using low-coherence interference microscopy** [9525-84]
- 9525 2G **Dynamic goniometer for industrial applications** [9525-85]
- 9525 2I **Analysis of adaptive laser scanning optical system with focus-tunable components** [9525-87]
- 9525 2K **Spatial filtering velocimeter for vehicle navigation with extended measurement range** [9525-89]
- 9525 2L **Precision inspection of micro-components flatness by Moiré interferometry** [9525-90]

- 9525 2M **Method of increasing the working distance of optical-electronic autocollimator** [9525-91]
- 9525 2N **The threshold sensitivity of the molecular condensation nuclei detector** [9525-92]
- 9525 2O **Special electronic distance meter calibration for precise engineering surveying industrial applications** [9525-93]
- 9525 2U **Algorithm for recognition and measurement position of pitches on invar scale with submicron accuracy** [9525-99]
- 9525 2V **A Non-scanning Reflection Technique (NRT) for measurements of optical nonlinearities** [9525-100]
- 9525 2W **Electrooptic converter to control linear displacements of the large structures of the buildings and facilities** [9525-101]
- 9525 2X **High-speed and long-time FBG interrogation system using wavelength swept laser** [9525-102]
- 9525 2Y **Electronic speckle pattern interferometry for fracture expansion in nuclear graphite based on PDE image processing methods** [9525-103]
- 9525 2Z **Oil film interferometry technique for skin friction measurement in subsonic and supersonic flows** [9525-104]
- 9525 30 **Design for measurement of the polarization state of light based on division of wave front** [9525-105]
- 9525 32 **Influence of video compression on the measurement error of the television system** [9525-107]
- 9525 33 **Evaluation of interference fringe parameters using sequential Monte Carlo method** [9525-108]
- 9525 34 **Fast inspection of bulk and surface defects of large aperture optics in high power lasers** [9525-109]
- 9525 35 **Enhanced adjustment methods for optical rotary encoders** [9525-110]
- 9525 36 **Investigation on measurement of mid-frequency wavefront error for large optics in high-power laser system** [9525-111]
- 9525 37 **Phase disturbing speckle-suppressing method in fiber metrology under coherent illumination** [9525-112]
- 9525 38 **Generalized phase-shifting algorithms: error analysis** [9525-113]
- 9525 3A **Uncertainty reduction of light spot angular position estimation in optical measurement system based on quadrant photodiode** [9525-115]
- 9525 3B **An approach to defect inspection for packing presswork with virtual orientation points and threshold template image** [9525-116]

- 9525 3C **Short wavelengths active bichromatic pulsed pyrometer for solids and liquids designed for measurements in harsh environments** [9525-117]
- 9525 3D **Sapphire fiber optic sensor for hot flow temperature analysis** [9525-118]
- 9525 3G **Integration of an intensity-modulated optical fiber temperature sensor into ceramic coating obtained by wire flame thermal spray** [9525-121]
- 9525 3H **Measurement of concentration of sugar in solutions with laser speckle decorrelation** [9525-122]
- 9525 3I **Precise angular position measurement of a point source in an optoelectronic system with CCD arrays upon a single readout** [9525-123]
- 9525 3J **Cost effective spectral sensor solutions for hand held and field applications** [9525-124]
- 9525 3K **Integration of an autonomous optical sensor system in the machining area of milling centers** [9525-125]
- 9525 3L **Quantifying height of machined steps on copper disk using Fourier domain short coherence interferometer** [9525-126]
- 9525 3M **The research of the nonexcluded air control error component using the optical-electronic system based on the dispersion method** [9525-127]
- 9525 3N **The definition of the railway position control error in the plane and profile using the optical-electronic system** [9525-128]
- 9525 3O **Aberration influence on accuracy of angle measurements by means of autocollimator** [9525-129]
- 9525 3P **Measurement of in-plane rotation angle by sampling Moiré technique** [9525-130]
- 9525 3Q **Monitoring of deep-sea industrial facilities using fiber optic cable** [9525-131]
- 9525 3T **The choice of marks for systems with noncontact position control** [9525-136]
- 9525 3U **Improving the resolution in phase-shifting Gabor holography by CCD shift** [9525-137]
- 9525 3V **Rapid detection of delamination areas in laminated structural elements by means of optically monitored strain solitons** [9525-138]
- 9525 3W **Diffusivity measurement using compact low cost field portable device based on light deflection** [9525-139]
- 9525 3X **GPUs benchmarking in subpixel image registration algorithm** [9525-140]
- 9525 3Y **Remote sensing of temperature and concentration profiles of a gas jet by coupling infrared emission spectroscopy and LIDAR for characterization of aircraft engine exhaust** [9525-141]
- 9525 3Z **Experimental measurement of group velocity dispersion during operation in cladding-pumped large-mode-area Yb-doped fibers** [9525-142]

- 9525 40 **Optic-electronic system for measuring the three-dimensional angular deformation of pipe sections at large constructions** [9525-143]
- 9525 42 **Optical-electronic system for real-time position control of roof's supporting structure** [9525-145]
- 9525 43 **Autocollimating systems for roll angle measurement of large-scale object deformation** [9525-146]
- 9525 45 **Measurement of plasma parameter in Dielectric Barrier Discharge (DBD) by Moiré deflectometry technique** [9525-148]
- 9525 46 **Research and development objectives for the spectral coherence tomography** [9525-149]
- 9525 47 **Application of Fresnel diffraction from a 2D array of reflective disks in optical profilometry of a flat surface** [9525-151]
- 9525 4A **Light scattering and transmission measurement using digital imaging for online analysis of constituents in milk** [9525-154]
- 9525 4B **Applying of digital signal processing to optical equisignal zone system** [9525-155]
- 9525 4C **System for deflection measurements of floating dry docks** [9525-156]
- 9525 4F **Evaluation of focal length of a lens using the Lau effect** [9525-159]
- 9525 4G **Potential use of the characteristic Raman lines of toluene (C_7H_8) as a reference on the spectral analysis of fuel blends** [9525-160]
- 9525 4J **Monitoring industrial facilities using principles of integration of fiber classifier and local sensor networks** [9525-162]
- 9525 4K **Length characterization of a piezoelectric actuator travel with a mode-locked femtosecond laser** [9525-164]
- 9525 4L **Preparation of optical frequency references based on gas filled hollow core photonics crystal fibers** [9525-165]
- 9525 4M **Industrial interferometry systems for multi-axis measurement** [9525-166]
- 9525 4N **Narrow-linewidth tunable laser working at 633 nm suitable for industrial interferometry** [9525-167]
- 9525 4O **Multipath interference characterization of bend-insensitive fibers for short-reach optical communications** [9525-168]

Authors

Numbers in the index correspond to the last two digits of the six-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Conference Committee

Symposium Chairs

Wolfgang Osten, Universität Stuttgart (Germany)
Gunther Notni, Fraunhofer-Institut für Angewandte Optik und
Feinmechanik (Germany)
Andrew John Moore, Heriot-Watt University (United Kingdom)

Conference Chair

Peter Lehmann, Universität Kassel (Germany)

Conference Co-Chairs

Wolfgang Osten, Universität Stuttgart (Germany)
Armando Albertazzi G. Jr., Universidade Federal de Santa
Catarina (Brazil)

Conference Program Committee

Oleg V. Angelsky, Yuriy Fedkovych Chernivtsi National University
(Ukraine)
Anand Krishna Asundi, Nanyang Technological University (Singapore)
Ralf B. Bergmann, Bremer Institut für angewandte Strahltechnik GmbH
(Germany)
Harald Bosse, Physikalisch-Technische Bundesanstalt (Germany)
Chau-Jern Cheng, National Taiwan Normal University (Taiwan)
Yuri V. Chugui, Technological Design Institute of Scientific Instrument
Engineering (Russian Federation)
Wim M. J. Coene, ASML Netherlands B.V. (Netherlands)
Jürgen W. Czarske, Technische Universität Dresden (Germany)
Peter J. de Groot, Zygo Corporation (United States)
Pietro Ferraro, Istituto Nazionale di Ottica (Italy)
Cosme Furlong, Worcester Polytechnic Institute (United States)
Marc P. Georges, Universiteit de Liège (Belgium)
Christophe Gorecki, FEMTO-ST (France)
Yoshio Hayasaki, Utsunomiya University (Japan)
Myung K. Kim, University of South Florida (United States)
Tomasz Kozacki, Warsaw University of Technology (Poland)
Richard Kowarschik, Friedrich-Schiller-Universität Jena (Germany)
Eberhard Manske, Technische Universität Ilmenau (Germany)
Kaoru Minoshima, The University of Electro-Communications (Japan)
Andrew John Moore, Heriot-Watt University (United Kingdom)

Gunther Notni, Fraunhofer-Institut für Angewandte Optik und
Feinmechanik (Germany)
Yukitoshi Otani, Utsunomiya University (Japan)
YongKeun Park, KAIST (Korea, Republic of)
Pascal Picart, Université du Maine (France)
Eduard Reithmeier, Leibniz Universität Hannover (Germany)
Christian Rembe, Polytec GmbH (Germany)
Robert Schmitt, RWTH Aachen Universität (Germany)
Jörg Seewig, Universität Kaiserslautern, Germany
Pierre Slangen, Ecole des Mines d'Alès (France)
Cristina Trillo, Universitat de Vigo (Spain)
Rainer Tutsch, Technische Universität Braunschweig (Germany)
Eriko Watanabe, The University of Electro-Communications (Japan)

Session Chairs

- 1 Resolution-enhanced Techniques
Peter Lehmann, Universität Kassel (Germany)
Wolfgang Osten, Institut für Technische Optik (Germany)
- 2 Interferometric Techniques
Pasquale Memmolo, Istituto Italiano di Tecnologia (Italy)
- 3 OCT and Fiber Sensors
Peter Lehmann, Universität Kassel (Germany)
- 4 Digital Holography
Pascal Picart, Université du Maine (France)
- 5 White-Light Interferometry
Peng Gao, Xi'an Institute of Optics and Precision Mechanics (China)
- 6 Speckle and Shearing Interferometry
Jörg Seewig, Universität Kaiserslautern (Germany)
- 7 Confocal and WLI Techniques
Peter J. de Groot, Zygo Corporation (United States)
- 8 Fringe Projection and 3D Imaging
Matias R. Viotti, Universidade Federal de Santa Catarina (Brazil)
- 9 Deflectometry
Gunther Notni, Fraunhofer-Institut für Angewandte Optik und
Feinmechanik (Germany)

- 10 Joint Session I: Measurement of Optical Components and Systems
Jean-Michel Asfour, Dioptic GmbH (Germany)
Christof Pruss, Institut für Technische Optik (Germany)
- 11 Joint Session II: Measurement of Optical Components and Systems
Jean-Michel Asfour, Dioptic GmbH (Germany)
Christof Pruss, Institut für Technische Optik (Germany)
- 12 3D Shape, Displacement, and Deformation Measurement
Jürgen W. Czarske, Technische Universität Dresden (Germany)
- 13 Nondestructive Testing and In-process Measurement
Marc P. Georges, Universiteit de Liège (Belgium)
- 14 Vibration Measurement
Joris Dirckx, Universiteit Antwerpen (Belgium)
- 15 Defect Detection
Armando Albertazzi G. Jr., Universidade Federal de Santa Catarina (Brazil)

Introduction

Optical metrology systems for industrial inspection are well-established for tens of years in nearly all relevant fields of industrial production. In times where the physical limits of most measurement principles are well-understood, it often seems to be a question of ingenious utilization of well-known physical concepts in combination with innovative components that push new developments and enhance the capabilities of optical metrology. Nevertheless, there remains considerable room for extension of application ranges, improvement of accuracy and reliability, and integration of optical inspection systems in industrial processes.

In 2015, two further aspects that direct public attention to optical technologies and metrology are noteworthy. The first is the international year of light proclaimed by the UNESCO and supported by many international and national organizations and institutions. The IYL supports optical technologies since it emphasizes their importance with respect to education, research and economy. The second aspect is driven by the industry 4.0 (Smart Factory) agenda and it is related to the future of manufacturing. Smart manufacturing systems and intelligent industrial networks require intensive application of measurement systems especially in industrial environments. Even today, optical systems show great potential in this context, since they are characterized by in-process capabilities, high speed, high accuracy, and reasonable costs.

As a consequence, the Munich conference is still an important international forum of scientific exchange and discussion in the field of optical metrology. More than 160 submissions demonstrate that even after nearly 14 years, the Munich conference series is a considerable event for researchers working in the field of optical metrology all over the world.

With more than 75 oral presentations and 80 posters, the 2015 conference could hold the high number and outstanding level of contributions. This builds the basis of its success. As in previous years, a significant number of contributions deal with optical measurement of three-dimensional geometrical features. A traditional field of application the conference always focuses on, is the measurement of optical components, e.g. aspheres, free-form surfaces, and optical systems. Therefore, we are happy to announce once again a joint session that will be held together with the EOS Conference on Manufacturing and Testing of Optical Components (EOSMTOC) on Wednesday afternoon.

As there are always individuals pushing things forward, we would like to thank those who supported this conference with their dedication. First, we would like to express our sincere gratitude to the members of the program committee for their support in the run-up of the conference. We also thank all authors, especially the distinguished plenary and invited speakers: Ramesh Raskar (MIT Media Laboratory, United States) for his paper "Extreme Computational Imaging: Photography, Health-tech and Displays," as well as Kaoru Minoshima (University of Electro-Communications, Japan), Peng Gao (State Key Laboratory of Transient Optics and Photonics, Chinese Academy of Sciences, China), Matias Viotti (Universidade Federal de Santa Catarina, Brazil), Joris Dirckx (University of Antwerp, Belgium), Marc Georges (Centre Spatial de Liège - Université de Liège, Belgium), and the invited speakers of the joint session, Greg Forbes (QED Technologies Inc., University of North Carolina at Charlotte, United States) and Michael Schulz (Physikalisch-Technische Bundesanstalt, Germany) for their stimulating lectures. Additionally, many thanks are due to the SPIE staff for their professional and cooperative work during the conference organization and the preparation of this proceedings volume. Finally, thanks are also due to all authors, who not only fill the conference with life but also give added value by contributing to these proceedings.

Peter Lehmann
Wolfgang Osten
Armando Albertazzi G. Jr.
