Proceedings of SPIE 0277-786X, V. 9559

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

High and Low Concentrator Systems for Solar Energy Applications X, edited by Adam P. Plesniak,
Andru J. Prescod, Proc. of SPIE Vol. 9559, 955901 · © 2015 SPIE
CCC code: 0277-786X/15/\$18 · doi: 10.1117/12.2218584

Proc. of SPIE Vol. 9559 955901-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *High and Low Concentrator Systems for Solar Energy Applications X*, edited by Adam P. Plesniak, Andru J. Prescod, Proceedings of SPIE Vol. 9559 (SPIE, Bellingham, WA, 2015) Six-digit Article CID Number.

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a six-digit CID article numbering system structured as follows:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v	<i>Authors</i>
vii	<i>Conference Committee</i>
ix	<i>Introduction</i>
xi	<i>Photochemical upconversion of light for renewable energy and more (Plenary Paper)</i> <i>[9562-202]</i>

SESSION 1 CONCENTRATING OPTICS AND TRANSMISSION

9559 02	Fresnel lens characterization for solar concentration efficiency [9559-1]
9559 03	Demonstration of an intermediate-scale lens-to-channel waveguide solar concentrator [9559-2]
9559 05	Fabrication and comparison of selective, transparent optics for concentrating solar systems [9559-4]

SESSION 2 ABSORBERS, COATINGS, AND RECEIVERS

9559 07	High-temperature selective solar thermal absorber based on Fabry-Perot resonance cavity [9559-5]
9559 08	Solar selective coatings based on carbon: transition metal nanocomposites [9559-6]
9559 09	Coupled optical-thermal-fluid and structural analyses of novel light-trapping tubular panels for concentrating solar power receivers [9559-7]
9559 0A	Testing and optical modeling of novel concentrating solar receiver geometries to increase light trapping and effective solar absorptance [9559-8]

SESSION 3 PV AND HYBRID PV-THERMAL

9559 0B	Model and analysis of solar thermal generators to reduce the intermittency of photovoltaic systems with the use of spectrum splitting [9559-9]
9559 0C	Design and feasibility of high temperature nanoparticle fluid filter in hybrid thermal/ photovoltaic concentrating solar power [9559-10]
9559 0D	A high temperature hybrid photovoltaic-thermal receiver employing spectral beam splitting for linear solar concentrators [9559-11]

9559 OE **Concentrating PV module output power using a wireless microcontroller based automatic sun tracker** [9559-12]

SESSION 4 HOLOGRAPHIC SYSTEMS AND ELECTROWETTING

9559 OF **Simulation of an electrowetting solar concentration cell** [9559-13]

9559 OG **Holographic lens spectrum splitting photovoltaic system for increased diffuse collection and annual energy yield** [9559-14]

9559 OI **Design of a holographic micro-scale spectrum-splitting photovoltaic system** [9559-16]

Authors

Numbers in the index correspond to the last two digits of the six-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Conference Committee

Symposium Chair

Oleg V. Sulima, GE Global Research (United States)

Conference Chairs

Adam P. Plesniak, Arzon Solar, LLC (United States)

Andru J. Prescod, SunShot Initiative, U.S. Dept. of Energy
(United States) and ManTech International Corporation
(United States)

Conference Program Committee

Harry A. Atwater Jr., California Institute of Technology (United States)

Noel C. Giebink, The Pennsylvania State University (United States)

Raymond K. Kostuk, College of Optical Sciences, The University of
Arizona (United States)

Introduction

Both Andru and Adam would like to thank all contributors and attendees to this year's 2015 SPIE Optics and Photonics Conference on High and Low Concentrator Systems for Solar Energy Applications. At the end of the 2013 conference, the conference leadership decided to expand the scope of the program to include research and discussion of concentrating optics for all solar energy applications, namely concentrator photovoltaic (CPV) and concentrated solar power (CSP) to encourage greater collaboration across the field of optics in solar. With the completion of the 2015 program, we are pleased to see a healthy diversity of research from the community.

Here are a few highlights from the 2015 conference:

- Research presentations from top US universities, such as Texas A&M University, The University of Arizona, Arizona State University, and The University of Tulsa
- Research presentations from top international universities, such as The University of New South Wales and RMIT University.
- Presentations from Sandia National Laboratory, a top US research institute
- Presentations from top companies in the industry, including Abengoa Research SL and Arzon Solar, LLC.

The time between now and the 2016 SPIE conference will no doubt be interesting for concentrating solar as well as renewable energy in general. While the U.S. waits to see the outcome of important policies, such as the Solar ITC (investment tax credit) scheduled to change drastically in December 2016, the world market for renewable energy research, technology, and products continues to expand rapidly as more and more areas of the globe look to adopt cleaner, more sustainable, and less volatile sources of energy. Continuous research into technologies and ideas in the field of high and low concentrator systems for solar energy will continue to be an important part of the balance.

Thanks to all of our researchers, authors, and presenters for a successful 2015 program. We look forward to seeing all of you again next year!

**Adam P. Plesniak
Andru J. Prescod**
