Proc. of SPIE Vol. 9616 961601-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Publication of record for individual papers is online in the SPIE Digital Library.

**SPIE. DIGITAL
LIBRARY**

SPIDigitalLibrary.org

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a six-digit CID article numbering system structured as follows:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

- v *Authors*
- vii *Conference Committee*
- ix *Introduction*

KEYNOTE SESSION

- 9616 02 **Discussions on radiation and space environment exposure of replicated optical mirrors produced from carbon composites (Keynote Paper) [9616-33]**

TECHNOLOGY FOR PLANETARY DEFENSE I

- 9616 03 **Stand-off molecular composition analysis (Invited Paper) [9616-1]**
- 9616 04 **Orbital simulations on the deflection of Near Earth Objects by directed energy (Invited Paper) [9616-2]**
- 9616 05 **Directed energy deflection laboratory measurements (Invited Paper) [9616-3]**
- 9616 06 **Simulations of directed energy thrust on rotating asteroids [9616-4]**

TECHNOLOGY FOR PLANETARY DEFENSE II

- 9616 07 **Local phase control for a planar array of fiber laser amplifiers (Invited Paper) [9616-5]**
- 9616 08 **Orbital simulations of laser-propelled spacecraft [9616-6]**
- 9616 09 **Directed energy interstellar propulsion of wafersats [9616-7]**
- 9616 0A **Solar lens mission concept for interstellar exploration [9616-8]**

RADIATION TESTING AND MODELING OF ORGANIC MATERIALS

- 9616 0B **Effects of degradation on the performance of a triphenylene based liquid crystal organic semiconductor (Invited Paper) [9616-10]**
- 9616 0D **Using complementary tools to characterize the effects of radiation in electro-optic polymeric materials (Invited Paper) [9616-12]**

EFFECTS OF PROTON IRRADIATION ON SEMICONDUCTOR PHOTODETECTORS

- 9616 OE **Proton irradiation of MWIR HgCdTe/CdZnTe** [9616-13]
- 9616 OF **MWIR unipolar barrier photodetectors based on strained layer superlattices** [9616-14]
- 9616 OG **Empirical trends of minority carrier recombination lifetime vs proton radiation for rad-hard IR detector materials** [9616-15]
- 9616 OH **Low-frequency noise spectrum measurements of mid-wave infrared nBn detectors with superlattice absorbers** [9616-16]
- 9616 OI **Progress towards vertical transport study of proton-irradiated InAs/GaSb type-II strained-layer superlattice materials for space-based infrared detectors using magnetoresistance measurements** [9616-17]

ADVANCES IN RADIATION HARD ATOMIC CLOCKS, GYROS AND LASERS

- 9616 OJ **High power VCSEL devices for atomic clock applications (Invited Paper)** [9616-18]
- 9616 OK **A multi-channel tunable source for atomic sensors (Invited Paper)** [9616-19]
- 9616 OL **Miniature atomic clock for space applications (Invited Paper)** [9616-20]
- 9616 ON **Compact, highly sensitive optical gyros and sensors with fast-light (Invited Paper)** [9616-22]

LIGHT HARVESTING AND IMAGE SENSORS FOR SPACE ENVIRONMENT I

- 9616 OO **Polymer light harvesting composites for optoelectronic applications (Invited Paper)** [9616-23]

LIGHT HARVESTING AND IMAGE SENSORS FOR SPACE ENVIRONMENT II

- 9616 OR **A CMOS TDI image sensor for Earth observation** [9616-26]

PERFORMANCE DEGRADATION IN PHOTONIC DEVICES FOR SPACE APPLICATIONS: MODELING AND EXPERIMENT

- 9616 OS **Microscopic model for studying radiation degradation of electron transport and photodetection devices (Invited Paper)** [9616-27]
- 9616 OU **Surface conduction in InAs and GaSb** [9616-29]
- 9616 OV **Radiation effects on Yb:YLF crystals used in cryogenic optical refrigerators** [9616-30]
- 9616 OW **Potential of CdSiP₂ for enabling mid-infrared laser sources** [9616-31]
- 9616 OX **Deflection of uncooperative targets using laser ablation** [9616-32]

Authors

Numbers in the index correspond to the last two digits of the six-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Performance Degradation in Photonic Devices for Space Applications: Modeling and Experiment

David A. Cardimona, Air Force Research Laboratory (United States)

Introduction

This volume contains papers presented at the SPIE Optics + Photonics conference entitled *Nanophotonics and Macrophotonics for Space Environments IX*. The conference proceedings are primarily comprised of in-progress and advanced research and development in a variety of photonic-based technologies for improving many current space technology applications.

The papers contained within the proceedings are authored by academic, industrial, and government agencies involved in investigating, designing, testing and analyzing photonic concepts, the survivability and reliability of components, and systems for potential and near-term operation in adverse space environments. Of particular interest are space effects that can degrade space technologies, such as near-Earth ionization and displacement radiation, temperature cycling, micrometeorite impacts, interactions with asteroids and comets, and other cosmic events encountered in interstellar and space exploration missions.

Within the proceedings are papers dealing with recent investigations and advances in photonic-based designs for directed-energy fiber-optic laser arrays for planetary defense concepts and future space exploration missions. A variety of polymer, organic and hybrid materials for efficient energy harvesting in space, and recent advances in radiation hardened semiconductors for applications requiring improved components (such as ring lasers, photoconductors, photovoltaic cells and radiation hardened IR detectors) are included in this volume.

Among the many innovative concepts found within these proceedings are applications and relatively new concepts involving the use of atomic clock Rb-based materials and vertical cavity emitting laser technologies for accomplishing radiation hardened space applications, such as precision interferometry sensors, inertial navigation systems, precision time keeping, and fast light enhanced optical gyroscopes. Discussed within these topic areas are novel approaches for achieving stable, light-weight systems and tunable single frequency operation that exceed present-day conventional systems. Of particular interest is the reported developmental progress of inertial navigation systems based on atomic interferometry, which would allow GPS-level precision in a GPS-free or GPS-jammed environment.

The chairs wish to thank the program committee, co-chair, session chairs, authors, and especially the SPIE staff for their excellent assistance and efforts for making this conference a success.

Edward W. Taylor
David A. Cardimona
