Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print. Papers are published as they are submitted and meet publication criteria. A unique citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID Number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages.

Introduction

The International Conference on Optics and Photonics 2015 (ICOP 2015) was the Golden Jubilee concluding conference of the Optical Society of India. The scope of the conference encompassed a wide variety of themes related to optics and photonics and no attempt had been made to give it a specific topical flavour.

This proceedings is a collection of 85 selected papers out of more than 300 papers presented at the conference. The topics include optical system design, optical testing and metrology; surface plasmon resonance in sensor applications; nonlinear optics and nano photonic applications; optical fiber and waveguides; optical polarization measurements; and digital image processing. We are hopeful that this documentation will be of help to a wide cross section of researchers in optics and photonics.

We wish to acknowledge the SPIE staff, for their untiring efforts in compilation of this volume.
