Proc. of SPIE Vol. 9697 969701-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print. Papers are published as they are submitted and meet publication criteria. A unique citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID Number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages.

Contents

vii	<i>Authors</i>
ix	<i>Conference Committee</i>
xi	<i>Introduction</i>

OPHTHALMIC NEW TECHNOLOGY

9697 03	Megahertz FDML laser with up to 143nm sweep range for ultrahigh resolution OCT at 1050nm [9697-2]
9697 06	In vivo tear film thickness measurement and tear film dynamics visualization using spectral domain OCT and an efficient delay estimator [9697-5]

FLOW AND PERFUSION IMAGING

9697 0J	Noise-immune complex correlation for vasculature imaging based on standard and Jones-matrix optical coherence tomography [9697-18]
9697 0K	Depth encoded three-beam swept source Doppler optical coherence tomography [9697-19]

OCT NEW TECHNOLOGY

9697 0P	Noncontact phase-sensitive dynamic optical coherence elastography at megahertz rate [9697-24]
9697 0S	Flexible A-scan rate MHz OCT: computational downscaling by coherent averaging [9697-27]
9697 0T	The how and why of a \$10 optical coherence tomography system [9697-28]

ADAPTIVE/COMPUTATIONAL OPTICS

9697 0W	Adaptive optics OCT using 1060nm swept source and dual deformable lenses for human retinal imaging [9697-31]
9697 0Z	3D-spectral domain computational imaging [9697-34]

BRAIN, SMALL ANIMAL AND HAND-HELD OCT

- 9697 16 **Optical polarization tractography based on polarization-sensitive optical coherence tomography [9697-41]**
- 9697 18 **Imaging of the stroke-related changes in the vascular system of the mouse brain with the use of extended focus optical coherence microscopy [9697-43]**

PS-OCT

- 9697 1I **Accurate and quantitative polarization-sensitive OCT by unbiased birefringence estimator with noise-stochastic correction [9697-53]**
- 9697 1K **Spectral-domain, polarization-sensitive optical coherence tomography system insensitive to fiber disturbances [9697-55]**

ELASTOGRAPHY

- 9697 1N **Corneal elastic anisotropy and hysteresis as a function of IOP assessed by optical coherence elastography [9697-58]**
- 9697 1O **Optical coherence elastography based on high speed imaging of single-shot laser-induced acoustic waves at 16 kHz frame rate [9697-59]**
- 9697 1P **Imaging shear wave propagation for elastic measurement using OCT Doppler variance method [9697-60]**
- 9697 1Q **Ultrahigh resolution optical coherence elastography using a Bessel beam for extended depth of field [9697-61]**
- 9697 1R **Single shot line-field optical coherence elastography [9697-62]**

IMAGE PROCESSING

- 9697 1S **Three-dimensional choroidal segmentation in spectral OCT volumes using optic disc prior information [9697-63]**
- 9697 1V **Development of a new, robust and accurate, spectroscopic metric for scatterer size estimation in optical coherence tomography (OCT) images [9697-66]**
- 9697 1W **Quantitative optical coherence tomography by maximum a-posteriori estimation of signal intensity [9697-67]**

NOVEL CONTRAST MECHANISMS

- 9697 24 **Diffusion-sensitive optical coherence tomography for real-time monitoring of mucus thinning treatments** [9697-75]
- 9697 25 **OCT-based in vivo tissue injury mapping** [9697-76]

NOVEL MICROSCOPY

- 9697 28 **Depth-resolved nanoscale nuclear architecture mapping for early prediction of cancer progression** [9697-79]

POSTER SESSION

- 9697 2H **Dual mode-locked swept sources for SS-OCT** [9697-88]
- 9697 2N **Coarse-grained and fine-grained parallel optimization for real-time en-face OCT imaging** [9697-94]
- 9697 2P **Suppression of saturation artifacts in swept source optical coherence tomography using dual channel detection** [9697-96]
- 9697 2R **Broadband master-slave interferometry using a super-continuum source** [9697-98]
- 9697 2S **Theory of Fourier phase within the framework of Fourier-domain optical coherence tomography** [9697-99]
- 9697 2T **Narrow linewidth broadband tunable semiconductor laser at 840 nm with dual acousto-optic tunable configuration for OCT applications** [9697-101]
- 9697 2V **Depths-encoded angular compounding for speckle reduction in optical coherence tomography** [9697-103]
- 9697 2X **Extending the effective imaging depth in spectral domain optical coherence tomography by dual spatial frequency encoding** [9697-105]
- 9697 31 **Optical coherence tomography probe design for reduced artifact generation and manufacturability** [9697-109]
- 9697 34 **Magnetic force Optical Coherence Elastography at 1.5 million a-lines per second** [9697-112]
- 9697 39 **Automated detection of inflammatory cells in whole anterior chamber of a uveitis mouse from swept-source optical coherence tomography images** [9697-117]
- 9697 3A **Automatic three-dimensional segmentation combined with in vivo microvascular network imaging of human retina by intensity-based Doppler variance optical coherence tomography** [9697-118]

- 9697 3B **Automatic airway wall segmentation and thickness measurement for long-range optical coherence tomography images** [9697-119]
- 9697 3C **Optimization of modified scanning protocol based correlation mapping optical coherence tomography at 200 kHz VCSEL source for *in vivo* microcirculation imaging applications** [9697-120]
- 9697 3D **Ex vivo brain tumor analysis using spectroscopic optical coherence tomography** [9697-121]
- 9697 3F **Optical coherence tomography for blood glucose monitoring through signal attenuation** [9697-123]
- 9697 3G **Profilometry of the air-tissue interface by all-semiconductor akinetic programmable swept-source with centimeters coherence length** [9697-124]
- 9697 3H **Nanoparticles displacement analysis using optical coherence tomography** [9697-125]
- 9697 3I **Spectroscopic low coherence interferometry using a supercontinuum source and an ultra broadband spectrometer** [9697-126]
- 9697 3M **Tri-band optical coherence tomography for lipid and vessel spectroscopic imaging** [9697-130]
- 9697 3N **Continuous imaging of the blood vessels in tumor mouse dorsal skin window chamber model by using SD-OCT** [9697-131]

Authors

Numbers in the index correspond to the last two digits of the six-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Conference Committee

Symposium Chairs

James G. Fujimoto, Massachusetts Institute of Technology
(United States)

R. Rox Anderson, Wellman Center for Photomedicine, Massachusetts
General Hospital (United States) and Harvard School of Medicine
(United States)

Program Track Chair

Tuan Vo-Dinh, Fitzpatrick Institute for Photonics, Duke University
(United States)

Anita Mahadevan-Jansen, Vanderbilt University (United States)

Conference Chairs

Joseph A. Izatt, Duke University (United States)

James G. Fujimoto, Massachusetts Institute of Technology
(United States)

Valery V. Tuchin, N.G. Chernyshevsky Saratov State University
(Russian Federation)

Conference Program Committee

Peter E. Andersen, Technical University of Denmark (Denmark)

Kostadinka Bizheva, University of Waterloo (Canada)

Stephen A. Boppart M.D., University of Illinois at Urbana-Champaign
(United States)

Zhongping Chen, Beckman Laser Institute and Medical Clinic
(United States)

Johannes de Boer, Vrije University Amsterdam (Netherlands)

Wolfgang Drexler, Medizinische Universität Wien (Austria)

Grigory V. Gelikonov, Institute of Applied Physics (Russian Federation)

Christoph K. Hitzenberger, Medizinische Universität Wien (Austria)

Robert A. Huber, Universität zu Lübeck (Germany)

Rainer A. Leitgeb, Medizinische Universität Wien (Austria)

Xingde Li, Johns Hopkins University (United States)

Yingtian Pan, Stony Brook University (United States)

Adrian Gh. Podoleanu, University of Kent (United Kingdom)

Andrew M. Rollins, Case Western Reserve University (United States)

Guillermo J. Tearney M.D., Wellman Center for Photomedicine
(United States)

Ruikang K. Wang, University of Washington (United States)

Maciej Wojtkowski, Nicolaus Copernicus University (Poland)
Yoshiaki Yasuno, University of Tsukuba (Japan)

Session Chairs

- 1 Ophthalmic New Technology
Joseph A. Izatt, Duke University (United States)
- 2 Cardiac Applications
Guillermo J. Tearney, Wellman Center for Photomedicine
(United States)

Introduction

These proceedings are from the Optical Coherence Tomography and Coherence Domain Optical Methods in Biomedicine XX, held February 15-17, 2016 at the SPIE Photonics West Symposia in San Francisco, California. This year's conference featured 134 oral and poster presentations from leading national and international research groups.

Optical coherence tomography and other coherence domain optical methods and instruments have proven to be effective tools for noninvasive medical diagnostics and monitoring a wide spectrum of pathologies as well as fundamental biomedical research. The focus of this conference was on the physical and mathematical grounds of coherence domain methods, as well as presentation of innovative instrumentation and techniques and their applications in biomedical science and clinical practice.

The conference was organized into several sessions including: Ophthalmic New Technology; Cardiac Applications; Flow and Perfusion Imaging; OCT New Technology; Adaptive/Computational Optics; Catheter/Endoscopic/Needle Probes; Brain, Small Animal and Hand-Held OCT; PS-OCT; Elastography; Image Processing; Novel Contrast Mechanisms; Novel Microscopy; and two poster sessions. A predominant fraction of the papers focused on optical coherence tomography – basic research, instrumentation and applications.

This year, there were presented significant advances in the development of new OCT technologies with discussion of OCT novel and upgraded technologies. The innovative hardware and software achievements in many cases were tested for biomedical applications to demonstrate their new facilities.

Many papers presented recent achievements in biological and clinical applications of OCT (five sessions: Ophthalmic New Technology; Cardiac Applications; Flow and Perfusion Imaging; Brain, Small Animal and Hand-Held OCT; and Elastography). This high quality research was a good addition to numerous OCT papers presented on Clinical Conferences of BiOS. Many of Conferences had special sessions on OCT, such as Photonics in Dermatology and Plastic Surgery; Therapeutics and Diagnostics in Urology; Optical Imaging, Therapeutics, and Advanced Technology in Head and Neck Surgery and Otolaryngology; Diagnostic and Therapeutic Applications of Light in Cardiology; Diagnosis and Treatment of Diseases in the Breast and Reproductive System II;

Clinical and Translational Neurophotonics; Endoscopic Microscopy XI; Optical Techniques in Pulmonary Medicine III; Lasers in Dentistry XXII; and Ophthalmic Technologies XXVI.

The poster session contained 50 papers on the major above mentioned topics. A short course for engineers, scientists, and clinicians SC312 - *Principles and Applications of Optical Coherence Tomography* by James Fujimoto accompanied the conference.

All submissions were fully peer reviewed. Authors were requested to submit a 3-page summary of their paper. The program committee evaluated the submissions for technical content and assigned a numerical score to each paper. The selection of the papers as oral presentations, posters, or non-acceptance was based upon the program committee score. We have had very positive feedback and a record number of submissions and attendees again this year.

Not all presented papers are published in this volume however the Conference Program and this Introduction reflect the full range of topics discussed during this very successful meeting.

The conference chairs would like to thank the members of the technical program committee for their help in organizing the conference. We sincerely appreciate the support of the SPIE and the conference staff. Finally, we would like to thank all of the conference attendees and manuscript authors for their contributions and participation which helped to make this meeting a success.
