Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a six-digit CID article numbering system structured as follows:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Numbers in the index correspond to the last two digits of the six-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Introduction

Interfaces play an essential role in many processes across biological, physical and chemical science, ranging from solar energy conversion and cross-membrane transport process processes to electrochemistry and catalysis. The *Physical Chemistry of Interfaces and Nanomaterials* conference brings together an interdisciplinary group of scientists (from academia, industry, and government laboratories) who study fundamental processes at interfaces and in nanomaterials.

This year's fifteenth edition of the conference moved along the spirit of previous years including sessions on organic/inorganic interfaces, charge transfer processes, and inorganic and hybrid systems. Sessions focused on ultrafast spectroscopy and microscopy, nanoparticles, and the electronic structure of perovskites. To highlight the recent developments in the perovskite materials and the new aspects in organic photovoltaics, we have organized an extensive joint session with the *Organic Photovoltaics* conference – a one full day forum dedicated to topics centering around charge transport in organic bulk heterojunctions and perovskite-based solar cells.

We hope the participants will agree with us that the presentations were diverse and stimulating. We are grateful to SPIE, the Organizing Committee, and most of all to the speakers that contributed to the success of this meeting.
