Volume 9931

Proceedings of SPIE 0277-786X, V. 9931

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Spintronics IX, edited by Henri-Jean Drouhin, Jean-Eric Wegrowe, Manijeh Razeghi, Proc. of SPIE
Vol. 9931, 993101 · © 2016 SPIE · CCC code: 0277-786X/16/\$18 · doi: 10.1117/12.2258399

Proc. of SPIE Vol. 9931 993101-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

**SPIE. DIGITAL
LIBRARY**

SPIDigitalLibrary.org

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a six-digit CID article numbering system structured as follows:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii	<i>Authors</i>
xi	<i>Conference Committee</i>
xv	<i>Introduction</i>

SPIN PHOTONICS AND SPIN PLASMONICS

9931 02	The effect of fringe fields from patterned magnetic domains on the electroluminescence of organic light-emitting diodes [9931-1]
---------	---

SPIN PHOTONICS AND SPIN LASERS

9931 0B	Leaky modes of dielectric cavities (Invited Paper) [9931-10]
9931 0C	High-frequency operation of spin vertical-cavity surface-emitting lasers: towards 100 GHz (Invited Paper) [9931-11]
9931 0D	Comparative analysis of energy-efficient long wavebands vertical cavity surface emitting lasers (Invited Paper) [9931-12]
9931 0F	Spin-photonic devices based on optical integration of Pancharatnam-Berry phase elements (Invited Paper) [9931-14]

MAGNETIC TUNNEL JUNCTIONS

9931 0G	Electric polarization control of magnetoresistance in complex oxide heterojunctions (Invited Paper) [9931-15]
9931 0H	Oxygen-vacancy driven tunnelling spintronics across MgO (Invited Paper) [9931-16]
9931 0I	Novel compact model for multi-level spin torque magnetic tunnel junctions (Invited Paper) [9931-17]

SPIN HALL EFFECT

9931 0W	Spin-transfer torque in ferromagnetic bilayers generated by anomalous Hall effect and anisotropic magnetoresistance (Invited Paper) [9931-31]
---------	--

MRAMS I

- 9931 13 **Spin-transfer torque switched magnetic tunnel junctions in magnetic random access memory (Invited Paper)** [9931-37]
- 9931 17 **Discussions on switching mechanism for ultimate reduction in energy consumption for STT-MRAM (Invited Paper)** [9931-41]

ULTRA-FAST MAGNETIZATION DYNAMICS

- 9931 1B **Spatio-temporal tracking of magnetic dynamics of adatoms via magnetic fields driven by femtosecond optical vortices (Invited Paper)** [9931-45]

ULTRA-FAST MAGNETIZATION DYNAMICS, SPIN COHERENCE, AND SPIN RESONANCE

- 9931 1L **Coherent manipulation of nuclear spins using spin injection from a half-metallic spin source (Invited Paper)** [9931-55]

SPIN ICE

- 9931 1M **Four states magnetic dots: a design selection by micromagnetic modeling (Invited Paper)** [9931-57]
- 9931 1O **Vertex micromagnetic energy in artificial square ice (Invited Paper)** [9931-59]
- 9931 1P **Exploring frustrated magnetism with artificial spin ice (Invited Paper)** [9931-60]
- 9931 1Q **Realizing artificial spin ice states for magnetic colloids on optical trap arrays (Invited Paper)** [9931-61]

QUANTUM WELLS AND QUANTUM DOTS I

- 9931 1V **Access to long-term optical memories using photon echoes retrieved from electron spins in semiconductor quantum wells (Invited Paper)** [9931-66]
- 9931 1W **Magneto-optical studies of CdSe/CdMnS/CdS core/multi-shell colloidal nanoplatelets (Invited Paper)** [9931-67]

TUNNEL HALL EFFECT AND CHIRALITY

- 9931 24 **Spin transmission through magnetic/nonmagnetic semiconductors interface (Invited Paper)** [9931-75]
- 9931 27 **Spin-orbit assisted chiral-tunneling at semiconductor tunnel junctions: study with advanced 30-band $k \cdot p$ methods (Invited Paper)** [9931-78]

SPIN-ORBIT COUPLING

- 9931 2E **New relativistic Hamiltonian: the angular magnetoelectric coupling (Invited Paper)**
[9931-85]
- 9931 2F **Birefringent coherent diffraction imaging (Invited Paper)** [9931-86]
- 9931 2I **Chiral asymmetry driven by unidirectional magnetic anisotropy in Spin-Orbitronic systems (Invited Paper)** [9931-89]

VOLTAGE CONTROL AND NEW DEVICES

- 9931 2M **Layer coupling and read disturbances in a buffered magnetic logic environment (Invited Paper)** [9931-93]
- 9931 2N **CMAT non-volatile spintronic computing: complementary MTJ logic (Invited Paper)**
[9931-94]

MAGNETO-ACOUSTICS AND MAGNETO-PLASMONICS

- 9931 2V **Transient grating generation of ultrafast surface magneto-elastic waves (Invited Paper)**
[9931-103]
- 9931 2W **The road towards nonlinear magneto-plasmonics (Invited Paper)** [9931-104]

MAGNONICS I

- 9931 34 **Topological magnon insulators: Chern numbers and surface magnons (Invited Paper)**
[9931-111]

CHIRAL TEXTURES AND MAJORANA FERMIONS

- 9931 36 **Shape-dependence of the barrier for skyrmions on a two-lane racetrack (Invited Paper)**
[9931-113]

MAJORANA STATES AND TOPOLOGICAL INSULATORS

- 9931 3I **Cyclotron resonance and cavity resonance effects in magneto-optical Faraday and Kerr effects on topological insulators (Invited Paper)** [9931-125]

GRAPHENE AND ORGANIC MATERIALS

- 9931 3M **Magneto-strain driven quantum heat engine on a graphene flake (Invited Paper)**
[9931-130]

- 9931 3O **Simple and advanced ferromagnet/molecule spinterfaces (Invited Paper)** [9931-132]
- 9931 3P **Electron transport and noise spectroscopy in organic magnetic tunnel junctions with PTCDA and Alq₃ barriers (Invited Paper)** [9931-133]

SUPERCONDUCTIVITY I

- 9931 3V **Accessing and probing of the photo-induced hidden state in 1T-TaS₂ with time- and angle-resolved photoemission spectroscopy (Invited Paper)** [9931-139]
- 9931 3Y **Edge current in a small chiral superconductor (Invited Paper)** [9931-142]

NANOMAGNETISM

- 9931 4I **Growth and oxidation of vanadium ultra-thin buffer layers on Fe(001) (Invited Paper)** [9931-145]

POSTER SESSION

- 9931 47 **Dependence of quantum kinetic effects in the spin dynamics of diluted magnetic semiconductors on the excitation conditions** [9931-151]
- 9931 48 **Geometric phase gradient and spin Hall effect of light** [9931-152]
- 9931 49 **Frequency tuning of polarization oscillations in spin-lasers** [9931-153]
- 9931 4A **Anisotropic longitudinal optical conductivity of a spin-orbit coupled system: effect of cubic Dresselhaus coupling** [9931-154]

Authors

Numbers in the index correspond to the last two digits of the six-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Introduction

The ninth edition of the Spintronics symposium of the SPIE conference gathered more than one hundred and fifty speakers in San Diego, California, United States, from Sunday 28 August to Thursday 1 September 2016.

In line with the eight previous editions, the Spintronics conference held in the framework of the Optics + Photonics symposium, covered most of the hot topics in Spintronics. The conference was also an invaluable opportunity for informal and extremely stimulating discussions between experts as well as for networking in a friendly atmosphere, witnessing for the dynamism of our field of research.

With 32 oral sessions plus one poster session, the symposium gave a broad spectrum of hot topics in Spintronics.

Recent fundamental results at the forefront of theoretical, experimental, and technological developments have been discussed. Special attention (with 2 sessions) has been paid to the developments of MRAMs, spin-hall effects, quantum well and quantum dots, spin-orbit effects, skyrmions, Majorana states and topological insulators, magnonics, and superconductivity. Many other active topics were covered, including: spin ice, spin coherence, ultrafast magnetization dynamics, voltage control, spin dynamics, spin photonics and plasmonics, magneto-acoustic and magnetic-plasmonics, transition metal dichalcogenides, magnetic circular dichroism, magnetic tunnel junctions, and nanomagnetism.

Additionally, we are grateful to the SPIE staff and to the program committee members who did a tremendous work. Special thanks to all colleagues and friends who helped organizing focused sessions. We warmly thank all the authors and speakers for their active participation. They have made this conference a great success.
