Index

3D beam propagation method (BPM), 238

ABAQUS, 61
accelerometer, 21, 400
acoustic surface waves (SAW), 270
active equalizer, 324
actuator, 425
actuator design, 95
add/drop multiplexers (ADM), 320
AlN, 257
alternative bonding techniques, 343
amorphous silicon, 273
amplitude detection, 260
angular rate sensor, 83
Anise, 61
anneal process, 234
anneal step, 11
anodic bonding, 340
ANSYS, 61
anti-stiction techniques, 344
antiresonant reflecting optical waveguide (ARROW), 217
arrayed waveguide grating routers (AWGR), 320
ARROW Waveguide Optical Sensors, 279
atmospheric pressure (APCVD), 12
ball bonding, 353
beam splitters, 249
BEMMODULE, 113
bending of the silicon wafer, 232
biaxial stress, 234
BiCMOS, 112
BICMOS processing, 62
bimetallic actuators, 49
Biosensors, 289
birefringence-preserving polarization, 243
bonding, 13
border, 195
boron doping, 11
borosilicate glass (BK-7), 266
boundary-element method (BEM), 136
Bragg Gratings, 284
Bubnov–Galerkin finite-element method, 145
bulk micromachining, 14, 172, 255
buried oxinitride waveguides, 239
calibration, 372
cantilever beam, 259

capacitive pressure sensors, 78
channel waveguide, 212
charge transport, 134
chemical vapor deposition (CVD), 12
Chip-on-Flex (COF) technology, 365
CMOS processing, 62
coefficients of thermal expansion (CTE), 49
comb-drive electrostatic actuator, 256
comparison of LPCVD and PECVD methods, 225
complementary metal oxide semiconductor (CMOS), 112
compressive stress, 232
computer-aided design (CAD), 111
constitutive equations, 126
contrast ratio, 193
control-volume method (CVM), 136
cost model, 449
couplers, 249
coupling efficiency, 251
coupling strategies, 157
creation of wealth, 485
crystal elasticity, 130
DAVINCI, 61
deep reactive ion etching, 33
Defense Advanced Research Projects Agency (DARPA), 3
deformable mirrors, 87
deposition data of LPCVD silicon nitride and silicon oxinitride films, 224
deposition data of PECVD silica, silicon nitride, and silicon oxinitride films, 222
deposition rates for silicon wet oxidation, 220
design failure mode and effect analysis (DFMEA), 74
design for manufacturing, 91
design of accelerometers, 81
design of pressure sensors, 75
design rules, 63
device packaging techniques, 373
die separation, 176, 346
dielectric effects, 132
dielectric permittivity, 132
Digital Light Processing (DLP™), 170
Digital Micromirror Device (DMD™), 28, 170
digital mirror display (DMD), 405
direct wafer bonding, 337
directional coupler, 250
discontinuous market pull, 493
discontinuous technology push, 494
discretization Methods, 136
DM, 87
DM modeling, 90
drive-in step, 11
dry oxidation, 219
dynamic thermal scene simulators (DTSS), 157

EDP, 255
eigensolutions, 156
elasto-optic effects, 135, 270
electrical interconnection, 353
electron-beam irradiation, 236
electrostatic, 51
electrostatic microactuators, 256
embedded-strip waveguide, 214
encapsulation, 369
epi-poly, 17
epitaxial (epi) layer, 17
equations of motion, 115
established infrastructure (B), 486
etching, 10
Eureka, 504
Eurimus, 504
Europractice, 503
Evanescent Interaction, 268
evanescent modulation, 281

Fabry–Pérot cavity, 273
fiber-to-waveguide coupling loss, 251
finite-difference method (FDM), 136
finite-element method (FEM), 136
flame hydrolysis deposition, 227
flip chip, 353
flip-chip transfer, 360
FLOTRAN, 61
Fresnel loss, 251

Global, 197
GRIN microlens, 288

HDTV, 170
heat transport thermoelectricity, 136
hermetic seal, 180
hidden hinge, 174
High Density Interconnect (HDI), 363
high-volume production, 73
horizontal “hot wall” LPCVD reactor, 223
humidity resistance test, 230

image, 195
in-use stiction, 344
index contrast, 214
industry association, 487
inertial sensor packaging, 399

inertial sensors, 21
information technology (IT), 496
integration of MEMS devices, 66
IntelliCAD, 61
interferometers, 249
interferometric distance sensors, 287
interferometric or intensity modulation techniques, 275
inverse statement, 148
ion exchange, 236

kinematics of deformation, 127
KOH, 255

Lagrange equation, 115
Lagrangian for crystalline continua, 121
laser irradiation, 236
LIGA, 18, 172
light-actuated micromechanical photonic switch (LAMPS), 315
lightwave networks, 303
linear equation systems, 155
local, 197
local polymerization-driven diffusion reactions, 248

low pressure (LPCVD), 12, 223
luminescence quenching, 289

M3 commercialization process, 488
M3 infrastructure, 510
M3 R&D activities, 484
M3 roadmap, 506
M3 roadmapping, 507
M3 technologies, 481
Mach–Zehnder interferometer, 250
Mach–Zehnder interferometer multiplexers, 243
magnetic actuator, 264
magnetic sensors, 53
manifold absolute pressure (MAP), 75
manifold air temperature (MAT), 75
MAP sensor, 75
market research, 485
marketing, 484
material interface, 124
Materials in micromachining, 254
MCM-ceramic (MCM-C) technology, 357
MCM-deposited (MCM-D) technology, 358
MCM-laminate (MCM-L) technology, 357
MCM-silicon technology, 359
mechanical dissipation, 130
mechanical effects, 127
MEMCAD, 61
MEMS, 333
MEMS acoustic actuators, 57
MEMS and MOEMS testing, 427
MEMS automated assembly, 417
MEMS devices, 5, 302
MEMS modeling, 61
MEMS packaging, 69
MEMS/MOEMS devices, 49
metal leadframes, 349
Michelson interferometer, 250
micro-optoelectromechanical systems (MOEMS), 111
microactuators, 255
microbridge, 277
microcantilever beam, 277
microconveyor belts, 32
microelectromechanical systems (MEMS), 3, 170, 481
microfluidics packaging, 422
microgrippers, 31
microhinges, 415
microlatches, 415
micromachined amplitude-modulated optical sensors, 277
micromachined cantilever beam accelerometer, 278
micromachined deformable mirror (μDM), 87
micromachined integrated optic switches, 261
micromachined nanoprobes, 292
micromachined optical modulators, 267
micromachined optical sensors, 274
micromachining, 4
micromotor, 25
microoptoelectromechanical systems (MOEMS), 210
micropumps, 26
microsensors, 50
microstereolithography, 34
microsystem, 111, 333
microsystem modeling, 112
microsystem simulation, 112
microsystems technology (MST), 481
microtip, 30
mirror planarity, 92
mismatching between the fiber and waveguide modes, 251
Modular, Monolithic Micro-Electro-Mechanical Systems (M3EMS), 356
modulators, 249
Multi-User MEMS Process (MUMPs), 413
Multichip Module (MCM), 356
nanotechnology, 35
NASTRAN, 61
national point contacts (NPC), 504
near-field detection, 260
near-field scanning optical microscope (NSOM), 327
Nexus, 500
nonlinearities, 153
nonuniformities, 197
optical birefringence, 234
optical bypass switch, 262
optical crossbar switch, 265
optical immunosensors, 291
optical interrogation, 274
optical lithography, 9
Optical MEMS, 334
optical microdevices, 54
optical pressure sensor, 279
optical readout, 276
optical sensors, 50
optical switches, 310
optical switches with active microactuation, 265
optical switches with passive microactuation, 262
optical testing, 181
optochemical sensors, 289
optomechanical pressure sensor, 158
optomechanical sensor, 274
overlap integral, 251
overmolding, 369
oxidation, 9
oxinitride strip-loaded waveguide, 237
P-glass flow (or PSG-flow), 226
package assembly, 179
packaging, 13
Parallel plate PECVD reactor, 221
parallel-plate electrostatic capacitor, 256
partial differential equations (PDEs), 136
passive optical networks (PONs), 314
patterning, 9
PEPPER, 61
Phase Modulation, 268
phosphine, 242
phosphorus doping, 11
phosphorus-doped oxide, 215
phosphorus-doped silica, 226
phosphosilicate glass, 225
phosphosilicate glass waveguides, 242
pick and place, 348
piezoelectric actuators, 57, 257
piezoelectricity, 132
piezoresistance, 57
piezoresistive acceleration sensor, 81
planar lightwave circuit, 263
plasma-enhanced chemical vapor deposition, 220
plasmon resonance, 291
Poisson ratio, 232
polynomial, 249
polycarbonate, 228
polyguide, 249
polymide, 228
polyimide microplatform, 267
polymer deposition, 228
poly(methyl methacrylate) (PMMA), 228
polysiloxane, 228, 248
polystyrene, 228
power limiter, 318
pre-molded packages, 349
pressure sensor, 5, 20, 374
propagation loss, 251
PROSIT-ISE, 114
public relations, 485
pure silica, 214
pyroelectricity, 132
PZT, 257
radiation losses, 251
rate constants for wet and dry oxidation of silicon, 220
reconfigurable drop module (RDM), 320
reflectivity, 193
release stiction, 344
reliability, 203
reliability of MEMS, 432
REMESH, 114
residual stress distribution, 276
resonant devices, 57
resonant microsensors, 83
rib waveguide, 212
sacrificial layer, 255
sawing, 177
scaling, 64
scattering loss, 251
scratch drive actuator (SDA), 257
self-test design, 66
SENSIM, 61
shape memory alloys (SMA), 59
shape of microlenses, 164
silicon nitride, 215
silicon oxinitride, 215
silicon oxinitride channel waveguides, 236
silicon piezoresistive pressure sensors, 76
silicon processing, 3
silicon V-groove, 253
silicon wafers, 8
silicon-rich silicon nitrides, 215
single-crystal epi, 17
slab waveguide, 214
smart sensors, 68
solution methods, 152
SPICE, 113
spin-coating technique, 228
splitters, 249
startup funding attraction, 485
stiction, 180, 344
Stoney formula, 232
strain amplitude, 270
strain-elasto-optic coefficient, 270
strain-induced optical birefringence, 282
stress, 128
stress and strain in MOEMS thin films, 98
stress-induced birefringence, 235
stress-induced membrane, 275
strip-loaded waveguide, 214
strong form, 137
structural, 255
structural layer, 255
SUPREM, 61
surface micromachining, 15, 172, 255
surface plasmon resonance, 289
SVG (Super Video Graphics Adapter), 170
SXGA (Super Extended Graphics Adapter), 171
TAB, 353
tape automated bonding, 353
TE/TM polarization converters, 249
technology CAD (TCAD), 112
tensile stress, 232
TEOS, 226
thermal expansion (CTE), 129, 369
thermal expansion actuators, 49
thermal imager, 157
thermal oxidation, 218
thermo-optic effect, 272
tilt angle, 193
tilt mirror, 304
time integration, 154
total available market (TAM), 334
transducer, 333
trimming, 372
tunneling sensor, 59
user-supplier club (USC), 502
variable optical attenuator, 304
variable optical attenuator (VOA), 306
VLSI, 302
wafer bonding, 336
wafer-scale package, 337
waveguide-cantilever, 294
wavelength division multiplexed (WDM), 243, 305
weak form, 144
wet oxidation, 219
window aperture, 198
wirebonding, 353
X-crosses, 249
XGA, 170
Y-junctions, 249
Young’s modulus, 232
ZnO, 257
