**Grigoriy Trestman** has over 40 years of experience in developing switch-mode power supplies for gas discharge lasers, electronic ballasts for fluorescent lamps, drivers for laser diodes, and LEDs. He holds a Masters in Physics and a Ph.D. in Photochemistry.

Trestman worked as a Senior Research Scientist in the Department of Research and Development of Tajik State University (USSR) for 20 years. After immigrating to the United States, he worked as a Power-Electronics Design Engineer for several U.S. companies (Glassman High Voltage Inc., Converter Power Inc., Philips Color Kinetics Inc.) for another 20 years. For the past 13 years, he worked as a Staff Engineer for Osram Sylvania Inc. He is currently a power-electronics consultant.

Trestman is a co-author and instructor of several professional development courses: “Powering and Integration of Laser Diode Systems;” “Electronic Ballast Design;” “Electrical Ballasts for AC, DC, and Pulsed Loads;” and “Powering Lasers and Laser Systems.” He holds eight U.S. patents and 14 patents in the former U.S.S.R. for various aspects of power conversion, electrical supply of CW, and pulse devices.
