

# Index

2-D octonion DFT, 280, 284, 288

## A

Agaian-Michelson enhancement  
measure, 338  
alpha-rooting, 298, 303

## C

center-symmetric local binary  
patterns, 349  
color cube, 116  
color direction images, 259  
color enhancement measure, 302  
color image enhancement, 305, 308  
color image, 150  
color models, 113, 123, 163  
color splitting-signal, 254, 258  
color visibility image, 352  
color-in-quaternion image, 269  
color-to-gray model, 146, 148  
color-to-gray transform, 143  
compass gradients, 360  
complex conjugate, 5  
complex exponential function, 8  
complex number, 3  
contrast, 333  
convolution, 323

## D

DFT, 143  
direction images, 226, 262, 273  
discrete Fourier transform, 143  
division of quaternions, 29

## E

edge, 322  
EME entropy measure, 338  
EME measure, 299, 312, 326  
EME visibility operator, 336  
EMEC measure, 302, 314  
enhancement measure, 299  
exponential function, 144

## F

facial color image recognition, 363  
facial image processing, 344  
facial image representation, 318  
facial image, 346

## G

Gaussian function, 322, 344  
generator of the signal, 268  
golden ratio, 23  
gradient, 322–323  
Grigoryan-Agaian enhancement  
measure, 337

## H

hexagonal lattice, 274  
hexagonal QDFT, 274  
hue component, 126, 129

## I

image brightness, 140  
image correlation, 320  
image enhancement, 296  
image restoration, 369

imaginary unit, 3, 12–13, 200  
 impulse response, 380  
 inner product, 36  
 intensity component, 129  
 inverse 2-D QDFT, 312

## L

Laplacian gradient, 322, 324, 343  
 LBP image, 346, 349  
 local binary patterns, 318

## M

mean operator, 327  
 mean-square-root measure, 339  
 Michelson visibility color  
   image, 355  
 Michelson visibility image, 333–334  
 Michelson visibility measure, 337  
 Michelson visibility operator, 339  
 models of mapping, 116  
 module of quaternion, 28  
 module, 5  
 multiplication of complex  
   numbers, 4, 10  
 multiplication of quaternions,  
   14, 19, 31, 154  
 multiplicative visibility image, 339

## N

non-uniform pattern, 350

## O

octonion DFT, 197, 200, 206, 210  
 octonion exponential function, 197  
 octonion image, 149, 152, 283  
 octonion signal, 203  
 octonion, 1  
 optimal filter, 381

## P

paired representation, 264  
 paired splitting-signals, 264  
 Panetta-Agaian measure, 338

perpendicular vectors, 37  
 phase of the DFT, 145  
 pixel, 110  
 polar form, 8  
 Prewitt compass gradients, 361  
 principle of superposition, 273  
 pure quaternion image, 118  
 pure quaternion, 17, 19, 21  
 pure unit quaternion, 31

## Q

quaternion conjugate, 27  
 quaternion DFT, 213, 232, 236,  
   240, 243  
 quaternion exponent, 75  
 quaternion gradient image, 357  
 quaternion gradient, 318  
 quaternion hyperbolic sine, 79  
 quaternion image enhancement, 301  
 quaternion image gradient, 356  
 quaternion image, 113, 116,  
   264, 276  
 quaternion logarithm, 74, 76  
 quaternion numbers, 1, 13, 16  
 quaternion sine, 77  
 quaternion Sobel gradient, 357  
 quaternion splitting-signals,  
   278, 286

## R

retinex, 303, 314  
 Robinson compass gradients, 361

## S

sampling points, 345  
 saturation component, 126  
 sine-Michelson visibility image, 334  
 Sobel operators, 324  
 splitting-signal, 216, 219,  
   222, 229, 254  
 square of the quaternion, 19  
 symplectic decomposition, 246

**T**

Table of multiplications, 15  
tensor representation, 213, 216, 252,  
266, 276, 285  
tensor transform, 272, 290  
two-window gradient, 340

**U**

uniform LBP image, 349, 365  
uniform LBP table, 351  
uniform pattern, 349

**V**

value component, 130  
vector product, 39

**W**

Weber ratio, 339  
Weber visibility color image, 354  
Weber visibility image, 328  
Weber visibility operators, 330, 332  
Weber-Fechner law, 326  
Wiener filtration, 369, 373

**Dr. Artyom M. Grigoryan** received the MSs degrees in mathematics from Yerevan State University (YSU), Armenia, USSR, in 1978, in imaging science from Moscow Institute of Physics and Technology, USSR, and in electrical engineering from Texas A&M University, USA, and Ph.D. degree in mathematics and physics from the YSU. He was a senior researcher with the Department of Signal and Image Processing at Institute for Problems of Informatics and Automation, and Yerevan State University, National Academy Science of Armenia. In 1996–2000 he was a Research Engineer with the Department of Electrical Engineering, Texas A&M University. In December 2000, he joined the Department of Electrical Engineering, University of Texas at San Antonio, where he is currently an Associate Professor. He is the author of five books, ten book-chapters, four patents, and many journal papers and specializing in the theory and application of fast multi-dimensional Fourier transforms, elliptic and quaternion Fourier transforms, tensor and paired transforms, unitary heap transforms, design of robust linear and nonlinear filters, image enhancement, encoding, and encryption, computerized tomography, and processing biomedical images.

**Dr. Sos S. Agaian** is Peter T. Flawn Professor of Electrical and Computer Engineering at the University of Texas, San Antonio, and Adjunct Professor at the Graduate School and University Center, City University of New York, and Professor at the Health Science Center, San Antonio. Dr. Agaian received his M.S. degree (summa cum laude) in mathematics and mechanics from Yerevan University, Armenia, the Ph.D. degree in math and physics from the Steklov Institute of Mathematics, Russian Academy of Sciences, and the Doctor of Engineering Sciences degree from the Institute of the Control System, Russian Academy of Sciences. He has authored more than 600 scientific papers, 9 books, and holds 15 patents. He is a Fellow of the International Society for Photo-Optical Instrumentations Engineers, Fellow of the IEEE, Fellow the Science Serving Society (AAAS), and Fellow Imaging Sciences and Technology (IS&T). He also serves as a foreign member of the Armenian National Academy. He is the recipient of MAESTro Educator of the Year, sponsored by the Society of Mexican American Engineers. Dr. Agaian has invented technologies that have been adopted across multiple disciplines, including the US government, and commercialized by industry. He is an Editorial Board Member of the Journal of Pattern Recognition and Image Analysis and an Associate Editor for several journals, including the Journal of Electronic Imaging (SPIE, IS&T) and the System Journal (IEEE). His research interests are multimedia processing, information security, artificial intelligence, computer vision, 3D imaging sensors, Fusion, and biomedical and health informatics.
