## Index

**A**
- acrylate coating, 92
- amplified spontaneous emission (ASE), 66

**B**
- beta-barium borate (BBO), 38
- biomedical monitoring, 14
- Bragg diffraction, 19
- Bragg peak, 20
- Bragg wavelength, 22
- Brillouin scattering effect, 125

**C**
- Canadian Communication Research Center, 9
- capacitive divisor, 195
- chemical etching, 229
- chirped Bragg grating, 165
- coarse wavelength division multiplex (CWDM), 75, 76
- coefficient of thermal expansion (CTE), 152
- cooling system, 36

**D**
- D-shaped fiber, 232
- dam monitoring, 121
- DC voltage measurement, 179
- distributed temperature sensing (DTS), 125
- dyke monitoring, 123

**E**
- edge filter, 68
- electrical isolation, 14
- electric-power industry, 3
- electromagnetic interference (EMI) immunity to, 4
- evanescent field, 26

**F**
- Fabry–Pérot (F-P) tunable filter, 69, 70
- fast Fourier transform (FFT), 213
- fiber Bragg grating (FBG), 6, 7
- fiber optic rotary joint (FORJ), 129
- flame brushing, 52
- frequency conversion crystal, 34
- fringe period, 53
- full width at half maximum (FWHM), 29
- fusion splicing, 46

**G**
- gas laser, 34
- graphene, 233

**H**
- heat conductance, 226
- heat exchange, 36
- hull monitoring, 118
- hydroelectric power plant (HPP), 129
- hydrogen loading, 12, 38
I
index of refraction, 10
interrogation techniques, 65

L
lab on fiber, 237
linear voltage differential
transformer (LVDT), 164
long-period grating (LPG), 12, 35

M
magnetostrictive actuation, 205
maximum voltage, 193

O
optical fiber sensor (OFS), 3, 5, 9
optical parts, 40
optical spectrum analyser (OSA), 44
ORMOCER, 97

P
phase mask, 22, 51
photodetector, 1, 71
photosensitivity, 9
polymeric optical fiber (POF), 2
Poisson ratio, 85
poly-metil-meta-acrylate (PMMA), 2
polyimide coating, 92
polymeric optical fiber (POF), 1

R
railway monitoring, 120
root mean square (RMS) current
sensor, 208
rotating machinery, 127

S
second harmonic generation
(SHG), 38
sensitivity, 29, 197
structural health monitoring
(SHM), 12, 116
superluminescent light-emitting
diode (SLED), 66
surface plasmon polariton
(SPP), 235

T
tapering, 231
temperature calibration, 80
temperature compensation, 101
temperature drift, 165
thermal expansion of silica, 27
thermo-optic coefficient, 27
total harmonic distortion
(THD), 215
total internal reflection (TIR), 5
transducer, 7
transmission line (TL), 208
transverse holographic method, 41

U
ultraviolet (UV), 10

V
Verdet constant, 204

Y
Young’s modulus, 86
Marcelo Martins Werneck was born in Petrópolis, Brazil. He received a B.Sc. in electronic engineering from the Pontifícia Universidade Católica of Rio de Janeiro in 1975 and a M.Sc. from the Biomedical Engineering Program, Federal University of Rio de Janeiro (UFRJ) in 1977. His Ph.D. was obtained from the University of Sussex, Brighton, U.K., in 1985. He has been with UFRJ since 1978, where he is currently a Lecturer and Researcher. He is also the Coordinator of the Instrumentation and Photonics Laboratory at the Electrical Engineering Program, UFRJ. His research interests include fiber optics sensors, nanobiosensors, transducers, and instrumentation.

Regina Célia da Silva Barros Allil was born in Rio de Janeiro, Brazil. She received her B.Sc. in electronic engineering from the Faculdade Nuno Lisboa, Rio de Janeiro, in 1988, and her M.Sc. from the Biomedical Engineering Program, UFRJ, in 2004. Her D.Sc. was obtained from the Electronic Engineering Program, Instrumentation and Photonics Laboratory, UFRJ, in 2010. She has been a researcher with the Institute of Chemical, Biological, Radiological, and Nuclear Defense at the Brazilian Army Technological Center, Rio de Janeiro, since 1985. She is also a researcher at the Instrumentation and Photonics Laboratory, UFRJ. Her research interests include fiber optics sensors, optoelectronic instrumentation, and biosensors.

Fábio Vieira Batista de Nazaré was born in Maceió, Estate of Alagoas, Brazil, in 1984. He received his B.Sc. in electronic engineering from the Universidade Federal de Pernambuco, Recife, Brazil, in 2007. He was a Research Engineer with the Nuclear Instrumentation Laboratory, Regional Center of Nuclear Sciences, Recife. He received his M.Sc. in electrical engineering from the Institute for Post-Graduate Studies and Research in Engineering, UFRJ, in 2010, where he also received his D.Sc. at the Instrumentation and Photonics Laboratory, Electrical Engineering Program, in 2014. He worked there as an electronic engineer between 2012 and 2016, mainly developing projects concerning optical sensors and fiber Bragg grating devices. He currently works as an Intellectual Property Researcher at the Instituto Nacional da Propriedade Industrial (INPI), Rio de Janeiro.
**CONTRIBUTORS**

Bruno Cerqueira Rente Ribeiro was born in Rio de Janeiro, Brazil. He is an Electronic Engineer who graduated from the Centro Federal de Educação Técnologica Celso Sucow da Fonseca (CEFET), Rio de Janeiro, in 2010. He received his M.Sc. in physics from the Centro Brasileiro de Pesquisas Físicas (CBPF) and is a Ph.D. researcher in the Instrumentation and Photonics Laboratory at the Electrical Engineering Program, UFRJ. He is currently a Lecturer at CEFET and also a Researcher at the institution’s Photonics Laboratory with interest in fiber optic sensors, nanophotonics, and instrumentation.

Leandro Alves Garção was born in Volta Redonda, Estate of Rio de Janeiro, Brazil, in 1985. He received his B.Sc. in tele communications engineering from the Faculdade Novo Milênio, Vila Velha, Estate of Espírito Santo, Brazil, in 2014. He is currently pursuing his M.Sc. at the Instrumentation and Photonics Laboratory, Electrical Engineering Program, UFRJ. His research interests include fiber optic sensors (mainly fiber Bragg gratings), transducers, and instrumentation.

Marceli Nunes Gonçalves was born in Rio de Janeiro, Brazil. She graduated with a B.Sc. in electrical engineering from the UFRJ, in 2013, and a M.Sc. in 2015. She is currently pursuing a D.Sc. at the Photonics and Instrumentation Laboratory (LIF), UFRJ. Her current research interests include fiber optic sensors applied to electric power systems.
