Guang-ming (George) Dai obtained his BS in physics from Xiamen University in 1986 and his PhD in astronomy from Lund University in 1995. Afterward, he served as a postdoctoral fellow and research scientist at Washington University's Department of Electrical and Systems Engineering, the Mallinckrodt Institute of Radiology, and the Center for Visual Science at the University of Rochester, respectively. He was also a senior software engineer between 1997 and 2001. He joined Visx in 2001 as a staff scientist working on various wavefront technology-related projects. Since Visx's merger with

Advanced Medical Optics in 2005, he has been the principal scientist leading the research effort to alleviate presbyopia using refractive surgery with an optimized wavefront shape that extends the depth of field. He is a fellow of the American Academy of Optometry, a member of the Optical Society of America and the Association for Research in Vision and Ophthalmology, and a past member of SPIE and IEEE. He also serves as a member of the Editorial Advisory Board for the newly endorsed Open Optics Journal. Additionally, he has published about 20 peer-reviewed journal articles and holds more than 20 US patents and pending patents.
