James M. Palmer (1937-2007) was a research professor emeritus in the College of Optical Sciences, University of Arizona. He received his AB in physics from Grinnell College in 1959, and his MS and PhD degrees in optical sciences in 1973 and 1975, respectively, from the University of Arizona, specializing in radiometry and infrared systems. Prior to attending the University of Arizona, he worked in industrial positions at Hoffman Electronics Corporation and Centralab, Semiconductor Division of Globe Union, Inc. Over a career spanning more than 40 years, he authored or coauthored more than 60 technical papers on many aspects of radiometry and photometry, and he was named Fellow of SPIE in 2003. Other awards include a NASA Group Achievement award for his work on the Pioneer Venus Mission (1979), a Tau Beta Pi Teacher of the Year Award (1992), and a Non-Traditional Student Teaching Award from the University of Arizona (1993). He taught numerous short courses at SPIE conferences, CIE meetings, and conferences of the Optical Society of America. He served as a consultant on commercial and government projects. Dr. Palmer was a brilliant lecturer whose former students, worldwide, have expressed gratitude for the knowledge they gained under his tutelage.

Barbara G. Grant received her BA in mathematics from San Jose State University in 1983, and her MS in optical sciences from the University of Arizona in 1989, where her graduate research focused on the absolute radiometric calibration of spaceborne imaging sensors. She was subsequently employed at Lockheed Missiles and Space Company, Sunnyvale, California, where supported by excellent management, she pursued problems in infrared sensor calibration and postflight data analysis of electro-optical payloads. She also worked as a NASA contractor, overseeing integration and test of imager and sounder payloads on the GOES weather satellite, for which she received two NASA awards. She is the author of two book-length volumes of market research for process spectroscopy instruments. Since 1995, her consultancy, Lines and Lights Technology, has addressed problems in systems engineering, infrared imaging and data analysis, UV measurement, and spectroradiometry, among other areas.
