Jason D. Schmidt is a Major in the U.S. Air Force and an assistant professor of electro-optics at the Air Force Institute of Technology in the Department of Electrical and Computer Engineering. Previously, he was a research physicist at the U.S. Air Force Research Laboratory’s Starfire Optical Range. He received the doctoral degree in Electro-Optics from the University of Dayton. Dr. Schmidt has been an active researcher in optical wave propagation through atmospheric turbulence for ten years. He received the Young Investigator Award in 2008 from the Air Force Office of Scientific Research. Besides optical wave propagation, Dr. Schmidt’s research interests include free-space optical communications and adaptive optics.
