

Index

- accelerometer 90–91
- actuator 42–47, 56, 71, 73, 77
- adaptive optics 8, 40, 41, 69–79
- Airy
 - function 5–7, 26–27, 61, 63
 - pattern 23, 27
 - disc 5–6
- astigmatism 19
- atmosphere 1–8, 11–18, 22, 25, 35, 39, 42, 46, 49, 50, 52, 61, 66, 88, 92

- bandwidth, 40–42, 49, 50, 54, 57, 58, 66, 67, 90
- beam wander, 1, 4, 5, 8, 16, 22, 23

- camera 6, 8, 26, 37, 38, 50–51, 53, 59, 89, 90
 - charge coupled device (CCD) 34, 38, 89
 - orthogonal transfer 85, 87, 89, 90
- coma 19
- compensator 39, 41, 49, 51, 52, 56, 57, 69
- controller 49, 51, 60, 69, 89
 - fuzzy logic 60
 - proportional, integral, and derivative (PID) 59–60
 - proportional 59

- defocus 18–19, 38–39, 45
- degrees of freedom (DOF) 40–43
- distortion 2, 3, 11, 19

- fitting error 41, 65

- fluctuations 1, 11, 16, 22, 80, 92
- Foucault knife-edge test 33, 35
- Fried parameter 17, 42

- Gaussian
 - beam 53
 - function 6
 - profile 52, 53
 - reference sphere 64
- Greenwood frequency 66, 67

- image jitter 5–8, 18, 22, 23
- index of refraction 3, 7, 11–16, 86
- interferometer 27–32, 79, 80, 82, 83
 - Mach-Zehnder 28–31
 - point diffraction 25, 30
 - shearing 25, 30–32

- jitter 6, 17, 18, 23, 43, 70
 - image 5–8, 18, 22, 23

- laser guide star 43, 70, 74, 76–78
- liquid crystal (LC) 42, 85

- Marechal approximation 64–65
- microelectromechanical systems (MEMS) 85, 90, 91
- mesosphere 12

- optical communications 8, 11, 69

- path difference 15, 26, 27, 29, 31
- phase 2, 11, 14–20, 25–34, 39, 42, 56, 57, 64, 65, 79, 85–87

- phase-diversity 34
- plane wave 2–6, 15, 52,
- plane wavefront 2, 3, 4, 7, 26, 52, 54
- point spread function (PSF) 24, 63
- position sensitive detector (PSD) 55
- pressure 3, 11, 12
- pyramid sensor 35, 36

- r_0 7, 17, 18, 42, 61, 63, 66
- Rayleigh limit 23, 61
- Ronchi grating 32

- satellite 3, 78
- seeing 63, 74, 95
 - astromical 7, 42, 70, 90, 93
- sensor 25, 26, 34–37, 49–52, 58–60, 65, 66, 70, 71, 87, 89, 90, 92
- Shack-Hartmann array 37–38
- Snell's law of reflection and refraction 13
- spatial filter 30, 31, 52, 53
- steering mirror 30, 31, 52, 53
- stratosphere 12
- Strehl ratio 23, 24, 61, 63, 64, 65

- telescope 1, 3, 5, 8, 15, 17, 21, 30, 35, 36, 40, 49, 50, 51, 52, 59, 61, 63, 69, 70–82, 85, 90, 91, 95
- temperature 3, 11, 12
- thermosphere 12

- tilt 4, 15, 18–21, 22, 25, 26, 37–45, 52, 54, 56, 57, 59, 63, 65, 66, 69, 82, 83, 90
- tip 18, 19, 21, 22, 39, 40, 42, 44, 88
- tip-tilt 40–46, 49, 51, 54, 69–74, 77, 79, 80, 82, 83, 87, 88, 93
 - stages 46
- troposphere 12
- turbulence 8, 16, 18, 46, 52, 61, 63, 69

- wave 2–6, 14, 15, 24, 35, 52, 64, 87, 88
 - equation 14
 - plane 2–6, 15, 52
- wavefront 2
 - compensator 39, 41, 49, 56, 69
 - plane 2, 3, 4, 7, 26, 52, 54
 - sensor 25, 28, 30–33, 37, 38, 39, 41, 49, 52–55, 66, 69, 71, 73
 - direct 30
 - pyramid 35, 36
 - indirect 31, 32
- wind 5, 6, 92

- Young's experiment 28

- Zernike
 - modes 21, 22, 42
 - polynomial 19–21

Scott W. Teare is an associate professor and chairman of the Electrical Engineering Department at New Mexico Tech, in Socorro, NM where he teaches courses in optics, physics, and electrical engineering. He earned his Ph.D. in Physics from the University of Guelph, Canada. He holds appointments with the Air Force Research Laboratory, Kirtland Air Force Base, NM, as an optical physicist; and is an adjunct professor in the Astronomy Department at San Diego State University, CA. He has been involved in the research and development of adaptive optics systems and high-resolution imaging systems for the past ten years, and has published more than forty scientific and technical articles. His current research interests include experimental adaptive optics, wavefront sensing and radiation effects on semiconductor devices. He is a member of the American Astronomical Society, Canadian Association of Physicists (P.Phys.), Optical Society of America, Royal Astronomical Society; SPIE--The International Society for Optical Engineering, and a Senior Member of the Institute for Electronic and Electrical Engineers.

Sergio R. Restaino is the section head for the Wavefront Sensing and Control Section of the Remote Sensing Division at the Naval Research Laboratory in Albuquerque, NM. He earned his Ph.D. in Physics from the University of Florence, Italy. He is also an adjunct professor at several universities, including New Mexico Tech. He has been involved in research on high resolution imaging problems for the past thirteen years. Specifically, he is currently involved in research activities involving adaptive optics, image stabilization and long baseline optical interferometry. He has published more than one hundred and twenty journal and proceeding papers. He is the editor or coeditor of five proceedings of international conferences, and is a featured speaker in several international professional meetings. He is a member of the Optical Society of America and SPIE--The International Society for Optical Engineering.
