This article [*J. Electron. Imaging*, **22**(2), 023012 (2013)] was originally published online on 10 May 2013 with an error on page 4. In several instances, the symbol $\mathcal{H}$ was omitted from the following passage:

With the computed transform $\mathbf{H}$, the RGB vector, $\hat{\mathbf{u}} \in \mathbb{R}^{3 \times 1}$, corresponding with the given CIEXYZ vector $\mathbf{q}$ under a certain illuminant, is predicted as

$$\hat{\mathbf{u}} \triangleq \mathcal{H}(\mathbf{q}) = \mathbf{H}^T \tilde{\mathbf{q}}. \quad (13)$$

Without loss of generality, suppose that three illuminants, namely, D65, A, and F11, are considered. Accordingly, we obtain three global transforms, represented by $\mathcal{H}_D(\cdot)$, $\mathcal{H}_A(\cdot)$, and $\mathcal{H}_F(\cdot)$ for these illuminants, and the RGB candidates are computed as $\hat{\mathbf{u}}_{D65} = \mathcal{H}_D(\mathbf{q})$, $\hat{\mathbf{u}}_A = \mathcal{H}_A(\mathbf{q})$, $\hat{\mathbf{u}}_{F11} = \mathcal{H}_F(\mathbf{q})$.

All online versions of the article were corrected on 22 May 2013. The article appears correctly in print.
