Copying of material in this book for internal or personal use, or for the internal or personal use of specific clients, beyond the fair use provisions granted by the U.S. Copyright Law is authorized by SPIE subject to payment of copying fees. The Transactional Reporting Service base fee for this volume is $18.00 per article (or portion thereof), which should be paid directly to the Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923. Payment may also be made electronically through CCC Online at copyright.com. Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/13/$18.00.

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIEDigitalLibrary.org

**Paper Numbering:** Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID Number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID Number.
Contents

vii Conference Committee
ix Introduction

SESSION 1 METROLOGY METHODS

8839 02 Spatial fringe analysis based on FFT using only two speckle pattern in ESPI (Invited Paper) [8839-1]
Y. Arai, Kansai Univ. (Japan)

8839 04 Improve dithering technique for 3D shape measurement: phase vs intensity optimization [8839-3]
J. Dai, Zhejiang Univ. (China); B. Li, S. Zhang, Iowa State Univ. (United States)

8839 05 Dual resolution imaging for metrology applications [8839-4]
K. Harding, D. Gray, GE Global Research (United States)

SESSION 2 METROLOGY ANALYSIS

8839 06 Surface profile measurement of a diffraction grating by a laser beam scanning interferometer using sinusoidal phase modulation (Invited Paper) [8839-5]
O. Sasaki, T. Kubota, S. Choi, T. Suzuki, Niigata Univ. (Japan)

8839 07 The diffractive optics calibrator: design and construction [8839-6]
W. Cai, P. Zhou, C. Zhao, J. H. Burge, College of Optical Sciences, The Univ. of Arizona (United States)

8839 08 Comparison between LCOS projector and DLP projector in generating digital sinusoidal fringe patterns [8839-7]
B. Li, Iowa State Univ. (United States); J. Gibson, Bethune-Cookman Univ. (United States); J. Middendorf, Y. Wang, S. Zhang, Iowa State Univ. (United States)

8839 09 Characterization of the optical components fabricated by femtosecond pulses in transparent materials [8839-8]
L. Mazule, S. Liukaityte, V. Sabonis, Vilnius Univ. (Lithuania); T. Gertu, ALTECHNA Co. Ltd. (Lithuania); M. Mikutis, D. Paipulas, T. Puodziunas, V. Sirutkaitis, Vilnius Univ. (Lithuania)

SESSION 3 INTERFEROMETRY AND FIBER METHODS

8839 0A Coaxial phase-shifting laser diode interferometer based on pulse modulation (Invited Paper) [8839-10]
T. Suzuki, T. Serizawa, O. Sasaki, S. Choi, Niigata Univ. (Japan)
Using fiber optic probes for photoluminescence and evaluation of an InGaN/GaN epitaxial wafer [8839-12]
W. Jung, J. Kim, H.-E. Joe, B.-K. Min, K. Oh, Yonsei Univ. (Korea, Republic of)

OCT based on multi-frequency sweeping Fizeau interferometer with phase modulating method [8839-13]
S. Choi, T. Watanabe, O. Sasaki, T. Suzuki, Niigata Univ. (Japan)

SESSION 4  METROLOGY APPLICATIONS I

Multimodal inspection in power engineering and building industries: new challenges and solutions (Invited Paper) [8839-14]
M. Kujawińska, M. Malesa, K. Malowany, Warsaw Univ. of Technology (Poland)

Automated cylindrical mapper using chromatic confocal measurement [8839-15]
E. Heidari, K. G. Harding, R. W. Tait, GE Global Research (United States)

Calibration of high aspect ratio quality control optical scanning system [8839-16]
A. Karadžinova, T. Hildén, J. Heino, Univ. of Helsinki (Finland); M. Berdova, Aalto Univ. and Micronova Nanofabrication Ctr. (Finland); R. Lauhakangas, F. García, E. Tuominen, I. Kassamakov, Univ. of Helsinki (Finland)

One-shot measurement of the air-liquid interface effect by a spectral-domain low-coherence dynamic light scattering technique [8839-17]
T. Watarai, T. Iwai, Tokyo Univ. of Agriculture and Technology (Japan)

Development of blood vessel search system using near-infrared light for laparoscopic surgery [8839-18]
K. Narita, E. Nakamachi, Y. Morita, A. Hagiwara, Doshisha Univ. (Japan)

SESSION 5  METROLOGY APPLICATIONS II

High-resolution real-time 3D shape measurement on a portable device [8839-20]
N. Karpinsky, M. Hoke, V. Chen, S. Zhang, Iowa State Univ. (United States)

Uni-axial inner profile measurement [8839-21]
T. Wakayama, Saitama Medical Univ. (Japan); T. Yoshizawa, NPO 3D Associates (Japan)

On-machine laser triangulation sensor for precise surface displacement measurement of various material types [8839-22]
K. Žbontar, B. Podobnik, F. Povše, LPKF Laser and Elektronika d.o.o. (Slovenia); M. Mihelj, Univ. of Ljubljana (Slovenia)

Adaptive control system for improvement of contrast in interferograms [8839-23]
N. Veloz, J. González-Laprea, R. Escalona, Univ. Simón Bolívar (Venezuela)
Full-field transmission-type angle deviation microscopes [8839-24]
M.-H. Chiu, M.-H. Tsai, National Formosa Univ. (Taiwan)
Conference Committee

Program Track Chair

Hi. Philip Stahl, NASA Marshall Space Flight Center (United States)

Conference Chairs

Kevin G. Harding, GE Global Research (United States)
Peisen S. Huang, Stony Brook University (United States)
Toru Yoshizawa, NPO 3D Associates (Japan)

Conference Program Committee

Yasuhiko Arai, Kansai University (Japan)
Anand Krishna Asundi, Nanyang Technological University (Singapore)
Mehdi Daneshpanah, KLA-Tencor Corporation (United States)
Khaled J. Habib, Kuwait Institute for Scientific Research (Kuwait)
Qingying Jim Hu, QUEST Integrated, Inc. (United States)
Katsuichi Kitagawa, Toray Precision Company, Ltd. (Japan)
Peter Kühmstedt, Fraunhofer-Institut für Angewandte Optik und Feinmechanik (Germany)
Yukitoshi Otani, Utsunomiya University (Japan)
Guiju Song, GE Global Research (United States)
Xianyu Su, Sichuan University (China)
Takamasa Suzuki, Niigata University (Japan)
Joseph D. Tobiason, Micro Encoder Inc. (United States)
Rainer Tutsch, Technische Universität Braunschweig (Germany)
Jiangtao Xi, University of Wollongong (Australia)
Song Zhang, Iowa State University (United States)

Session Chairs

1 Metrology Methods
   Kevin G. Harding, GE Global Research (United States)

2 Metrology Analysis
   Takamasa Suzuki, Niigata University (Japan)

3 Interferometry and Fiber Methods
   Toru Yoshizawa, NPO 3D Associates (Japan)
4 Metrology Applications I
   Song Zhang, Iowa State University (United States)

5 Metrology Applications II
   Yukitoshi Otani, Utsunomiya University (Japan)
Introduction

This proceedings volume of the 2013 conference on Dimensional Optical Metrology and Inspection for Practical Applications offers valuable insights and significant advancements for the field of optical dimensional metrology. As computer technology has improved, so have the tools for optical metrology. Reported in these proceedings is improved quality pattern projecting using dithering, faster processing using the GPU for real-time 3D at 60 frames per second, and the reduction of phase noise by using multiple frequency projections. These capabilities represent improvements upon the current commercial offerings for fast 3D metrology. Another paper on new methods discusses interesting work on the use of a Fizeau system that produced surface micro-profiles down to 10 nanometer resolution with less noise than white light interferometers. An innovative approach in another paper shows an inner diameter gage, projecting light out from the center, but also looking along the same line, using depth from focus to measure the radius at any given point. The design allows for measurements in tight spaces and ridges within the inner surface. Finally, as an example of the many practical applications discussed, the reader may find interesting some very timely work on the combination of digital image correlation methods and thermo imaging for monitoring pipes and boiler drums in the power generation industry. Overall, the field of optical dimensional metrology continues to be a vibrant and growing field that is finding new, practical applications every day.
