Medical Imaging 2015: Computer-Aided Diagnosis

Lubomir M. Hadjiiski
Georgia D. Tourassi
Editors

22–25 February 2015
Orlando, Florida, United States

Sponsored by
SPIE

Cosponsored by
ALIO Industries (United States) • Alpinion Medical Systems (United States) • Modus Medical Devices Inc. (Canada) • Bruker (United States)

Cooperating Organizations
AAPM—American Association of Physicists in Medicine (United States) • APS—American Physiological Society (United States) • CARS—Computer Assisted Radiology and Surgery (Germany) • Medical Image Perception Society (United States) • Radiological Society of North America (United States) • Society for Imaging Informatics in Medicine (United States) • World Molecular Imaging Society • The DICOM Standards Committee

Published by
SPIE

Volume 9414
Part One of Two Parts

Proceedings of SPIE. 1605-7422, V. 9414
SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Contents

xiii  Authors
xix  Conference Committee
xxiii  Introduction
xxvii  2015 Medical Imaging Paper Award Recipients

Part One

MUSCULOSKELETAL AND MISCELLANEOUS

9414 02  Automatic diagnosis of inflammatory muscle disease for MRI using computer-extracted features of bivariate histograms [9414-1]
9414 03  Segmentation of the sternum from low-dose chest CT images [9414-2]
9414 04  Detection of degenerative change in lateral projection cervical spine x-ray images [9414-3]
9414 05  Diagnostic index of 3D osteoarthritic changes in TMJ condylar morphology [9414-4]
9414 06  3D statistical shape models incorporating 3D random forest regression voting for robust CT liver segmentation [9414-5]

LUNG AND CHEST I

9414 07  Pulmonary embolism detection using localized vessel-based features in dual energy CT [9414-6]
9414 08  Robustness evaluation of a computer-aided detection system for pulmonary embolism (PE) in CTPA using independent test set from multiple institutions [9414-7]
9414 09  Automatic detection of spiculation of pulmonary nodules in computed tomography images [9414-8]
9414 0A  Improving CAD performance by seamless insertion of pulmonary nodules in chest CT exams [9414-9]
9414 0B  Analysis of the Vancouver lung nodule malignancy model with respect to manual and automated segmentation [9414-10]
9414 0C  Factors affecting uncertainty in lung nodule volume estimation with CT: comparisons of findings from two estimation methods in a phantom study [9414-11]

Efficient Hilbert transform-based alternative to Tofts physiological models for representing MRI dynamic contrast-enhanced images in computer-aided diagnosis of prostate cancer [9414-27]

The evaluation of multi-structure multi-atlas pelvic anatomy features in a prostate MR lymphography CAD system [9414-28]

KEYNOTE AND NOVEL METHODS

Deep learning with non-medical training used for chest pathology identification [9414-30]

Texture classification of anatomical structures in CT using a context-free machine learning approach [9414-31]

Multi-test cervical cancer diagnosis with missing data estimation [9414-32]

HEAD AND NECK

Atlas-based segmentation of brainstem regions in neuromelanin-sensitive magnetic resonance images [9414-33]

Automatic anatomy recognition in post-tonsillectomy MR images of obese children with OSAS [9414-34]

Multi-fractal detrended texture feature for brain tumor classification [9414-35]

Small white matter lesion detection in cerebral small vessel disease [9414-36]

Automated prediction of tissue outcome after acute ischemic stroke in computed tomography perfusion images [9414-37]

Automated segmentation of thyroid gland on CT images with multi-atlas label fusion and random classification forest [9414-38]

Detection of Alzheimer's disease using group lasso SVM-based region selection [9414-39]

BREAST II

Identifying metastatic breast tumors using textural kinetic features of a contrast based habitat in DCE-MRI [9414-40]

Association of mammographic image feature change and an increasing risk trend of developing breast cancer: an assessment [9414-76]

Local mammographic density as a predictor of breast cancer [9414-20]

Digital breast tomosynthesis: application of 2D digital mammography CAD to detection of microcalcification clusters on planar projection image [9414-43]
Combination of conspicuity improved synthetic mammograms and digital breast tomosynthesis: a promising approach for mass detection [9414-44]

**PROSTATE AND COLON II**

9414 1A Characterization of aggressive prostate cancer using ultrasound RF time series [9414-106]

9414 1B Multimodal classification of prostate tissue: a feasibility study on combining multiparametric MRI and ultrasound [9414-46]

9414 1C Towards intraoperative surgical margin assessment and visualization using bioimpedance properties of the tissue [9414-47]

9414 1D Quantification, validation, and follow-up of small bowel motility in Crohn's disease [9414-48]

9414 1E A content-based image retrieval method for optical colonoscopy images based on image recognition techniques [9414-49]

9414 1F Detection of colonic polyp candidates with level set-based thickness mapping over the colon wall [9414-50]

**VESSELS, HEART, AND EYE II**

9414 1G Automated measurement of pulmonary artery in low-dose non-contrast chest CT images [9414-51]

9414 1H Quantitative analysis of arterial flow properties for detection of non-calcified plaques in ECG-gated coronary CT angiography [9414-52]

9414 1I Automated age-related macular degeneration classification in OCT using unsupervised feature learning [9414-53]

9414 1J Automatic discrimination of color retinal images using the bag of words approach (First Place RFW All Conference Best Student Paper Award) [9414-54]

**LUNG AND CHEST II**

9414 1K Reducing annotation cost and uncertainty in computer-aided diagnosis through selective iterative classification [9414-55]

9414 1L A computer-aided diagnosis system to identify regions of pathologic change in temporal subtraction images of the chest [9414-56]

9414 1M Exploring new quantitative CT image features to improve assessment of lung cancer prognosis [9414-57]
Nonlinear dimensionality reduction of CT histogram based feature space for predicting recurrence-free survival in non-small-cell lung cancer [9414-58]

Computer-aided detection of lung cancer: combining pulmonary nodule detection systems with a tumor risk prediction model [9414-59]

Part Two

MULTI-ORGAN

Pneumothorax detection in chest radiographs using local and global texture signatures [9414-60]

Computer-aided detection of bladder mass within contrast-enhanced region of CTU [9414-61]

Automatic identification of IASLC-defined mediastinal lymph node stations on CT scans using multi-atlas organ segmentation [9414-62]

Ureter segmentation in CT urography (CTU) by COMPASS with multiscale Hessian enhancement [9414-63]

Prediction of treatment outcome in soft tissue sarcoma based on radiologically defined habitats [9414-65]

POSTERS: BREAST

Potential reasons for differences in CAD effectiveness evaluated using laboratory and clinical studies [9414-41]

Usefulness of histogram analysis of spatial frequency components for exploring the similarity and bilateral asymmetry in mammograms [9414-66]

Automated lesion detection in dynamic contrast enhanced magnetic resonance imaging of breast [9414-67]

Fully automated quantitative analysis of breast cancer risk in DCE-MR images [9414-68]

Quantification of tumor changes during neoadjuvant chemotherapy with longitudinal breast DCE-MRI registration [9414-69]

A new Fourier transform based CBIR scheme for mammographic mass classification: a preliminary invariance assessment [9414-70]

Utilizing digital breast tomosynthesis projection views correlation for microcalcification enhancement for detection purposes [9414-71]

A new breast cancer risk analysis approach using features extracted from multiple sub-regions on bilateral mammograms [9414-72]
Chest wall segmentation in automated 3D breast ultrasound using rib shadow enhancement and multi-plane cumulative probability enhanced map [9414-73]

A new CAD approach for improving efficacy of cancer screening (Cum Laude Poster Award) [9414-74]

Feature extraction from inter-view similarity of DBT projection views [9414-75]

Simplified false-positive reduction in computer-aided detection scheme of clustered microcalcifications in digital breast tomosynthesis [9414-77]

Automatic breast density classification using a convolutional neural network architecture search procedure [9414-79]

Automated detection of breast tumor in MRI and comparison of kinetic features for assessing tumor response to chemotherapy [9414-80]

Preliminary study on the automated detection of breast tumors using the characteristic features from unenhanced MR images [9414-81]

Estimation of corresponding locations in ipsilateral mammograms: a comparison of different methods [9414-82]

POSTERS: HEAD AND NECK

3D active shape models of human brain structures: application to patient-specific mesh generation [9414-84]

Computer-aided recognition of dental implants in x-ray images [9414-85]

Computer aided detection of brain micro-bleeds in traumatic brain injury [9414-87]

Automatic segmentation method of striatum regions in quantitative susceptibility mapping images [9414-88]

Decoding brain cancer dynamics: a quantitative histogram-based approach using temporal MRI [9414-89]

Discriminative analysis of non-linear brain connectivity for leukoaraiosis with resting-state fMRI [9414-90]

Automated classification of mandibular cortical bone on dental panoramic radiographs for early detection of osteoporosis [9414-91]

Imbalanced learning for clinical survival group prediction of brain tumor patients [9414-92]

Longitudinal MRI assessment: the identification of relevant features in the development of Posterior Fossa Syndrome in children [9414-93]

Quantification of vocal fold motion using echography: application to recurrent nerve paralysis detection [9414-94]
Automatic detection of larynx cancer from contrast-enhanced magnetic resonance images [9414-95]

POSTERS: LUNG AND CHEST

Quantitative assessment of smoking-induced emphysema progression in longitudinal CT screening for lung cancer [9414-96]

A novel spherical shell filter for reducing false positives in automatic detection of pulmonary nodules in thoracic CT scans [9414-97]

An outlier filtering approach for machine sourced weak segmentations [9414-98]

Segmentation of interstitial lung disease patterns in HRCT images [9414-99]

Semi-automated segmentation of solid and GGO nodules in lung CT images using vessel-likelihood derived from local foreground structure [9414-100]

Improved pulmonary nodule classification utilizing lung parenchyma texture features [9414-101]

Quantification of pulmonary vessel diameter in low-dose CT images [9414-102]

Automated detection of lung tumors in PET/CT images using active contour filter [9414-103]

Peripleural lung disease detection based on multi-slice CT images [9414-104]

POSTERS: PROSTATE AND COLON

Prostate cancer detection from model-free T1-weighted time series and diffusion imaging [9414-45]

Context-specific method for detection of soft-tissue lesions in non-cathartic low-dose dual-energy CT colonography [9414-105]

POSTERS: VESSELS, HEART, AND EYE

Automated detection of Schlemm’s canal in spectral-domain optical coherence tomography [9414-108]

Computer-based assessment of right ventricular regional ejection fraction in patients with repaired Tetralogy of Fallot [9414-109]

Automatic generation of endocardial surface meshes with 1-to-1 correspondence from cine-MR images [9414-110]
Semi-automated measurements of heart-to-mediastinum ratio on 123I-MIBG myocardial scintigrams by using image fusion method with chest x-ray images [9414-111]

Myocardial strain estimation from CT: towards computer-aided diagnosis on infarction identification [9414-112]

Heart rate measurement based on face video sequence [9414-113]

Characterization of vascular tree architecture using the Tokunaga taxonomy [9414-116]

POSTERS: MUSCULOSKELETAL AND MISCELLANEOUS

Bone age assessment meets SIFT [9414-117]

A novel framework for the temporal analysis of bone mineral density in metastatic lesions using CT images of the femur [9414-118]

Spinal focal lesion detection in multiple myeloma using multimodal image features [9414-119]

Knee osteoarthritis image registration: data from the Osteoarthritis Initiative [9414-120]

Dynamic cortex stripping for vertebra evaluation [9414-121]

Prognosis of intervertebral disc loss from diagnosis of degenerative disc disease [9414-122]

A web-based procedure for liver segmentation in CT images [9414-123]

POSTERS: MULTI-ORGAN

Evaluation of chemotherapy response in ovarian cancer treatment using quantitative CT image biomarkers: a preliminary study [9414-124]

Voxel-based registration of simulated and real patient CBCT data for accurate dental implant pose estimation [9414-125]

Automated classification of bone marrow cells in microscopic images for diagnosis of leukemia: a comparison of two classification schemes with respect to the segmentation quality [9414-126]

Human wound photogrammetry with low-cost hardware based on automatic calibration of geometry and color [9414-127]

Automatic anatomy partitioning of the torso region on CT images by using multiple organ localizations with a group-wise calibration technique [9414-128]

Automated torso organ segmentation from 3D CT images using structured perceptron and dual decomposition [9414-129]
9414 3M  Automatic detection and segmentation of vascular structures in dermoscopy images using a novel vesselness measure based on pixel redness and tubularness [9414-130]

9414 3N  Investigation of optimal feature value set in false positive reduction process for automated abdominal lymph node detection method [9414-131]

9414 3O  A pilot study on bladder wall thickness at different filling stages [9414-132]
Authors

Numbers in the index correspond to the last two digits of the six-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

**Nicholas A. Petrick**, U.S. Food and Drug Administration (United States)
**Carol L. Novak**, Siemens Corporation, Corporate Technology (United States)
Introduction

Following the success of previous years, the CAD Conference at the SPIE Medical Imaging Symposium 2015 again invited original papers on all aspects related to CAD, including: theory, overall system development, database construction, segmentation, feature extraction, classifier design, workstation design, and evaluation.

In 2015, the CAD Conference received 149 abstracts and offered acceptance to approximately 88%. Abstract submissions came from various countries including: United States, Japan, Germany, the Netherlands, South Korea, Brazil, India, United Kingdom, Australia, Canada, France, Israel, Singapore, Spain, Portugal, China, and Mexico. The presentations spanned three-and-a-half days and included 64 oral presentations, 62 posters, a keynote address, a panel discussion, and a live demonstration workshop.

Keynote

On Monday morning, Dr. Tanveer Syeda-Mahmood from IBM Research - Almaden (United States) gave the CAD conference keynote on “Role of machine learning in clinical decision support”. She was introduced by Dr. Larry Clarke from the National Cancer Institute (NCI), who discussed the importance of joint efforts among NCI, academia, and industry for big data collection, storage, and analysis, machine learning, publicly available datasets, and Grand Challenges.

In the very inspiring keynote, Dr. Syeda-Mahmood presented the new IBM research avenues and initiatives related to clinical decision support. She discussed the role of advanced machine learning techniques and presented examples from practical multimodal decision support systems such as the IBM AALIM (Advanced Analytics for Information Management) system. The IBM AALIM system pioneered a new direction in evidence-based medicine using the concept of patient similarity and exploiting consensus opinions of other physicians who have seen similar patients. The fusion of healthcare data with inference algorithms from artificial intelligence, machine learning techniques, and patient similarity is driving a multimodal approach for clinical decision support.

In addition, Dr. Syeda-Mahmood discussed the IBM Medical Sieve Radiology Grand Challenge: a worldwide collaborative research effort across IBM research labs that is expandng patient data and knowledge-driven learning methods to define new clinical decision support systems for radiologists. The next generation for clinical decision support, she said, will involve cognitive assistants using multimodal reasoning and machine learning in all stages of disease detection.
LUNGx: the CAD Grand Challenge

As part of the CAD Conference, SPIE, along with additional support from the American Association of Physicists in Medicine (AAPM) and the National Cancer Institute (NCI), conducted a “Grand Challenge” on developing quantitative image analysis methods for the diagnostic classification of malignant and benign lung nodules. This LUNGx Challenge provided a unique opportunity for participants to compare their algorithms to those of others from academia, industry, and government in a structured, direct way using the same data set.

The results of 13 algorithms from 11 groups were compared. An algorithm presented by Lyndsey Pickup, Mirada Medical UK (United Kingdom), was identified as the winner, and an algorithm presented by Yoganand Balagurunathan, Moffitt Cancer Center and University of Arizona (United States) was named runner-up. During the conference, participants presented posters about their LUNGx methods and results. The Challenge winner and runner-up were invited to join the special panel discussion. Additional information, including updates and lessons learned from the LUNGx Challenge, will be published soon in the SPIE Journal of Medical Imaging.

Panel Discussion

The special panel discussion on Tuesday afternoon focused on the topic of “CAD Grand Challenges—Present and Future.” The moderators of the panel were Georgia D. Tourassi, Oak Ridge National Laboratory (United States) and Lubomir M. Hadjiiski, University of Michigan Health System (United States). The Panelists were: Samuel G. Armato, The University of Chicago (United States); Karen Drukker, The University of Chicago (United States); Laurence P. Clarke, National Cancer Institute (United States); George Redmond, National Cancer Institute (United States); Stephen Aylward, Kitware, Inc. (United States); Nicholas A. Petrick, U.S. Food and Drug Administration (United States); Lyndsey Pickup, Mirada Medical UK (United Kingdom), Yoganand Balagurunathan, Moffitt Cancer Center and University of Arizona (United States).

The panel provided a forum for discussion of the current experience with the LUNGx Challenge, other CAD grand challenges, and the future potential of these avenues for evaluation and testing of decision support systems. The panel included experts from academia, the National Cancer Institute (NCI) (United States), the Food and Drug Administration (FDA) (United States), industry, and the winners of the LUNGx Challenge. The panel members and audience discussed current and future opportunities for CAD Grand Challenges to become important testbeds and to enable cross platforms for decision support system evaluation. The panel agreed that by efficient planning and coordination among key organizing institutions, CAD Grand Challenges can play a vital role in the selection of promising classes of algorithms and systems for further clinical translational efforts and prompting advances in computer-aided diagnosis and ultimately precision medicine.
Live demonstration workshop

In our annual Tuesday evening live demonstration workshop, 13 research groups interactively presented their real-time demonstrations of CAD workstations. The workshop was organized by Stephen Aylward, Kitware, Inc. (United States), and Heang-Ping Chan, University of Michigan Health System (United States). The applications ranged from detection, characterization, treatment monitoring, surgery, segmentation, and visualization aids in breast, lung, brain, abdomen, bladder, and spine imaging.

Awards

Ibrahim Sadek, Université de Bourgogne, (France) from our CAD Conference was named the Robert F. Wagner Best Student Paper First-Place Winner for the entire 2015 Medical Imaging Symposium, for his paper, "Automatic discrimination of color retinal images using the bag of words approach," [9414-54].

The high level of participation in all venues of the CAD conference gave a clear indication of the substantial active research work in the CAD field and the importance of the SPIE Medical Imaging CAD Conference as a major meeting place to present and discuss ongoing research and future directions.

Lubomir M. Hadjiiski
Georgia D. Tourassi
2015 Medical Imaging Award Recipients

Robert F. Wagner Award

Robert F. Wagner was an active scientist in the SPIE Medical Imaging meeting, starting with the first meeting in 1972 and continuing throughout his career. He ensured that the BRH, and subsequently the CDRH, was a sponsor for the early and subsequent Medical Imaging meetings, helping to launch and ensure the historical success of the meeting. The Robert F. Wagner All-Conference Best Student Paper Award (established 2014) is acknowledgment of his many important contributions to the Medical Imaging meeting and his many important advances to the field of medical imaging.

This award is cosponsored by:

The Medical Image Perception Society

2015 Recipients:

First Place: **Automatic discrimination of color retinal images using the bag of words approach** (9414-54)
I. Sadek, D. Sidibé, F. Meriaudeau, Univ. of Burgundy (France)

Second Place: **Automated pulmonary lobar ventilation measurements using volume-matched thoracic CT and MRI** (9417-42)
F. Guo, S. Svenningsen, E. Bluemke, M. Rajchl, J. Yuan, A. Fenster, G. Parraga, The Univ. of Western Ontario (Canada)

Conference Awards

2015 Recipients:

Cum Laude Poster Award: **A new CAD approach for improving efficacy of cancer screening** [9414-74]
B. Zheng, M. Tan, Y. Qiu, The Univ. of Oklahoma (United States); W. Qian, F. Lure, The Univ. of Texas at El Paso (United States); L. Li, Hangzhou Dianzi Univ. (China); J. Pu, Univ. of Pittsburgh (United States); Y. Kang, Northeastern Univ. (China)
