Volume 9853
The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

ISSN: 0277-786X
ISSN: 1996-756X (electronic)

**Paper Numbering:** Proceedings of SPIE follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a six-digit CID article numbering system structured as follows:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Authors

Numbers in the index correspond to the last two digits of the six-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Conference Committee

Symposium Chair

Ming C. Wu, University of California, Berkeley (United States)

Symposium Co-chair

Majid Rabbani, Eastman Kodak Company (United States)

Conference Chairs

David B. Chenault, Polaris Sensor Technologies, Inc. (United States)
Dennis H. Goldstein, Polaris Sensor Technologies, Inc. (United States)

Conference Program Committee

Julia Craven-Jones, Sandia National Laboratories (United States)
Michael G. Gartley, Rochester Institute of Technology (United States)
Kristan P. Gurton, U.S. Army Research Laboratory (United States)
Neelam Gupta, U.S. Army Research Laboratory (United States)
Charles Kim, Northrop Grumman Electronic Systems (United States)
Michael W. Kudenov, North Carolina State University (United States) and College of Optical Sciences, The University of Arizona (United States)
Joao M. Romano, U.S. Army Armament Research, Development and Engineering Center (United States)
Joseph A. Shaw, Montana State University (United States)
J. Scott Tyo, UNSW Canberra (Australia)

Session Chairs

1 Mathematics and Modeling
   Michael G. Gartley, Rochester Institute of Technology (United States)

2 Instrumentation I
   Dennis Goldstein, Polaris Sensor Technologies, Inc. (United States)

3 Applications and Measurements I
   Dennis Goldstein, Polaris Sensor Technologies, Inc. (United States)

4 Instrumentation II
   Neelam Gupta, U.S. Army Research Laboratory (United States)
5  Analysis I
    **David B. Chenault**, Polaris Sensor Technologies, Inc. (United States)

6  Applications and Measurements II
    **Michael W. Kudenov**, North Carolina State University (United States)
    and College of Optical Sciences, The University of Arizona (United States)

7  Analysis II
    **Joseph A. Shaw**, Montana State University (United States)
Introduction

This conference is the latest in a long series of conferences that address current research in optical polarization with an emphasis on remote sensing applications. It is the twelfth conference with the title (with some slight variation) *Polarization: Measurement, Analysis, and Remote Sensing*.

As improvements in imaging sensors, polarizer fabrication techniques, understanding of the Mueller matrix, and modeling fidelity occur, so too do we see improvements in the ability of polarization sensors to perform the tasks required in remote sensing. Subsequently, the results presented in this volume proceedings are evidence of this.

The *Polarization* conference series started in 1997 in San Diego, California, United States. Conferences prior to the current one in reverse chronological order are documented in Proceedings of SPIE Vols. 9099, 8364, 7672, 6972, 6240, 5432, 4819, 4481, 4133, 3754 and 3121.

The proceedings you have before you are made up of papers from seven conference sessions: one session addressed Mathematics and Modeling, two sessions focused on Instrumentation, two sessions described Applications and Measurements, and two others were devoted to Analysis.

We would like to express our sincere appreciation to our committee members, session chairs, and contributing authors whose combined efforts made this conference a success.

David B. Chenault  
Dennis H Goldstein
