xiii Introduction

OPTOELECTRONICS AND MICRO/NANO-OPTICS

10460 02 Silica waveguide-type ring resonators for resonant micro-optic gyroscopes [10460-1]
10460 03 Research of high-hardness and wear-resistant SiOx film coating on acrylic substrates [10460-2]
10460 04 Broadband beam shaping using two cascaded diffractive optical elements with different sizes of effective phase region [10460-3]
10460 05 Optical diode based on cascaded nonlinear nanocavities [10460-4]
10460 06 Gold reflective metallic gratings with high absorption efficiency [10460-5]
10460 07 Compact plasmonic memristor with high extinction efficiency [10460-7]
10460 08 Method for extending optical axis dynamic range and detecting high-precision centroid based on a two-dimension orthogonal diffraction grating [10460-8]
10460 09 Design and optimization of surface profilometer based on coplanar guide rail [10460-9]
10460 0A Study on combined polishing process of aspherical aluminum mirrors [10460-10]
10460 0B A novel nano-sensor based on optomechanical crystal cavity [10460-11]
10460 0C Fabrication of hierarchical superhydrophobic surfaces [10460-12]
10460 0D A Si nanocube array polarizer [10460-13]
10460 0E Silicon-on-insulator-based polarization-independent 1x3 broadband splitter with adiabatic coupling [10460-14]
10460 0F Photoresponse and photo-induced memory effect in the organic field-effect transistor based on AlOx nanoparticles at the interface of semiconductor/dielectric [10460-15]
10460 0G Performance of Joule-Thomson coolers for large diameter focal plane infrared photodetectors [10460-16]
Far-field propagation of Kerr spatial solitons in graphene embedded planar dielectric waveguide [10460-17]

In-line photonic microcells based on the elliptical microfibers for refractive index sensors applications [10460-18]

Modeling and simulation for fewer-axis grinding of complex surface [10460-19]

Design and simulation of flight control system for man-portable micro reconnaissance quadcopter [10460-20]

The spontaneous emission noise limit of active resonator optical waveguide gyroscope [10460-21]

Distributed solar radiation fast dynamic measurement for PV cells [10460-22]

A tunable optical 90° hybrid composed of a 2×4 MMI, a 2×2MMI coupler, and a heater pad [10460-25]

Numerical modeling study of silver nano-filling based on grapefruit-type photonic crystal fiber sensor [10460-26]

Fabrication of a high-integration multi-spectral imaging lens and its application [10460-27]

The spatial light modulator for controlling beam deflection [10460-28]

High performance VO₂ thin films fabricated by room-temperature reactive magnetron sputtering and rapid thermal annealing [10460-30]

Highly-transparent multi-layered spin-coated silk fibroin film [10460-31]

Tunable dual-band absorber based on hybrid graphene metamaterial in terahertz frequencies [10460-32]

Effects of ambient temperature on performance of Joule-Thomson coolers for large diameter infrared photo-detectors [10460-33]

Multifocal microlens for bionic compound eye [10460-34]

Design and simulation of a lighting system for a shadowless space [10460-35]

Research on the influence of baffle in luminous flux measurement with integrating sphere [10460-36]

Numerical analysis of focal depth for continuous phase filters [10460-37]

The research on material removal characteristic of reactive ion beam figuring for optics mirrors [10460-38]

Brownian dynamics of the optically trapped spinning microparticles in low pressures [10460-39]
Refractive index measurement based on confocal method

Effect of H$_2$O intentionally doping on photoelectric properties in MOVPE-growth GaN layers

PbS quantum dot-graphene hybrid phototransistor

Research on the calibration methods of the luminance parameter of radiation luminance meters

Extraordinary optical transmission through wedge-shape metallic slits array embedded with rectangular cavities

Modification of optical properties of spin-coated TiO$_2$ film by heat treatments

Coherent field-controlled rectification in one-dimension waveguide coupling to three-level atoms system

Simulating continuous-time and discrete-time quantum walks with self-collimated light

The optical properties and stability of submicron hollow particles

The calibration of specular gloss meters and gloss plates

Distinguishing the number of captured microspheres in dual-beam optical trap by measuring the back light signal

GaN ultraviolet p-i-n photodetectors with enhanced deep ultraviolet quantum efficiency

Noise suppression for the differential detection in nuclear magnetic resonance gyroscope

Architectural design of deep metallic sub-wavelength grating for practical holography display

Research on characteristics measurement of infrared defect tester

Effect of nano-scale morphology on micro-channel wall surface and electrical characterization in lead silicate glass micro-channel plate

Multi-factor fiber coil temperature distribution model of FOG based on distributed fiber temperature sensor

Study on mechanism and suppression method of bias drift at different temperature caused by cross-coupling of FOG circuit

The calculation and representation of polarization aberration induced by 3D mask in lithography simulation

Preparation of surface enhanced Raman substrate and its characterization
Metalens with mono-layered-film phase compensation mechanism realizing subwavelength focusing [10460-66]

Study on the influence of inner wall morphology and structure defect on the emission point of microchannel plate [10460-69]

Enhanced spectral sensitivity in two dimensional photonic crystal slab index of refraction sensors [10460-70]

Characterization of the contribution of CGH fabrication error to measurement uncertainty in null test [10460-72]

Fabrication of micro/nano optical fiber by mechano-electrospinning [10460-73]

The development of high sensitivity silicon avalanche photodiode array [10460-74]

Design of double-ring resonator for tunable lasers on silicon [10460-75]

Defect analysis and detection of micro nano structured optical thin film [10460-76]

Design of TIR collimating lens for ordinary differential equation of extended light source [10460-77]

Study on the degree of polarization of the wire grid polarizer [10460-78]

Manufacture of ultra high precision aerostatic bearings based on glass guide [10460-80]

Retrieve polarization aberration from image degradation: a new measurement method in DUV lithography [10460-84]

Solution algorithm of dwell time in slope-based figuring model [10460-89]

Preparation and properties of CVD-graphene/AgNWs hybrid transparent electrodes for the application of flexible optoelectronic devices [10460-90]
Authors

Numbers in the index correspond to the last two digits of the seven-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first five digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Zhiping Zhou, Peking University (China)

Session Chairs

1 Plasmonics
   Min Gu, Royal Melbourne Institute of Technology University (Australia)

2 2D Materials and Semiconductor
   Materials
   Qiu Min, Zhejiang University (China)

3 Metasurface and Metamaterials
   Li Qiang, Zhejiang University (China)

4 Metasurface and Metamaterials
   Li Zhipeng, Capital Normal University (China)

5 Holography, Diffractive Optic
   Qiwen Zhan, University of Dayton (USA)

6 Nanosensor
   Liu Hui, Nanjing University (China)
Introduction

Applied Optics and Photonics China (AOPC2017) is the annual conference of the CSOE, and one of the largest academic and industry activities in the field of optical and optoelectronic technology in China. The organization committee has built a platform of academic exchanges, industry exhibitions, and cooperation negotiations in one. There are 8 technical conferences, 7 themes of the Exhibition and approximately 600 technical presentations. We sincerely hope that the research and development of optoelectronic technology are promoted, and the international cooperation between industry and the optical and optoelectronic fields are enhanced.

AOPC2017 is technically co-sponsored by the Chinese Society for Optical Engineering, the Optical Society of Korea (OSK), Optics and Photonics Society of Singapore (OPSS), European Optical Society (EOS), Optical Society of Japan (OSJ) and SPIE. There are also 60 cooperative organizers to support the conference. We received over 1209 contributions from more than 15 countries, including the United States, the United Kingdom, Germany, France, Spain, Australia, Canada, Mexico, Brazil, Japan, Korea, Thailand, Singapore, the Russian Federation, China, and more. There are more than 700 presentations published in the Proceedings of SPIE. After careful discussion, we suggested four keynote speeches which are presented by famous scientists from Germany, Australia, Japan and China. 138 excellent invited talks were presented, 45 are from outside of China. Their presentations reflect first-class research in the field of optics and photonics technology. On behalf of the Organization Committee of AOPC, I express thanks to all the invited speakers and authors for their contributions and support of the conference.

Finally, on behalf of Prof. Zhuang Songlin, and other co-chairmen, and the Organization Committee of AOPC, I would like to heartily thank our sponsors and cooperating organizers for all they have done for the conference, the participants and friends for their interests and efforts in helping us to make the conference a success, the program committee for their effective work and valuable advice, and especially the AOPC2017 Secretariat and the staff of SPIE for their tireless effort and outstanding services in preparing the conference and publishing the Proceedings.

We wish AOPC2017 great success! Hope to see you next year!

Guofan Jin
