SESSION 2

10834 0I  Hyperspectral digital holographic microscopy approach for reduction of coherence induced disturbances in quantitative phase imaging of biological specimens [10834-49]

10834 0J  Qualitative characterization of collagen hydrogel membranes using digital holographic microscopy and SHG microscopy [10834-62]

10834 0K  Generation and spatio-temporal evolution of polarization speckle (Invited Paper) [10834-118]

10834 0L  Modulation of depolarization analyzed by interferometry setup [10834-89]

10834 0M  MOEMS-based imaging probe with integrated Mirau micro-interferometer and MEMS microscanner for swept-source OCT endomicroscopy [10834-47]

10834 0N  Holography and tomography with compact EUV and SXR sources [10834-85]

10834 0O  Learning-based signal retrieval from scattering media (Invited Paper) [10834-133]

10834 0P  Measurement of selective species concentration using spectroscopic holography [10834-58]

10834 0Q  Detection and sorting of microplastics in marine environment by new imaging tools [10834-60]

SESSION 3

10834 0R  Study of transparent media using a simple digital holographic interferometer configuration (Invited Paper) [10834-21]

10834 0S  Applications of optical coherence in interferometric metrology [10834-48]

10834 0T  Recent developments in high speed imaging and applications in speckle light [10834-36]

10834 0U  A single shot shearography device for simultaneous measurement in three shearing directions [10834-39]

10834 0V  Mechanical deformations of space mirrors under thermal stress and their effect on wavefront errors: measurements by ESPI and comparison with multiphysics modeling [10834-73]

10834 0W  Defect detection during laser welding by laser speckle photometry [10834-13]

10834 0X  EXTREME shearography: development of a high-speed shearography instrument for measurements of the surface strain components during an impact event [10834-34]

10834 0Y  Source coding of holographic data: challenges, algorithms and standardization efforts (Invited Paper) [10834-132]
Full and horizontal parallax Fourier holography with laser capture and LED display (Invited Paper) [10834-124]

Speckle suppression method for infrared digital holograms based on sparse object representation and noise diversity [10834-55]

An airborne, scanning, digital holography system [10834-56]

Deformation measurements in cortical bone-miniscREW interface in human maxilla by using digital speckle pattern interferometry [10834-6]

Wavefront reconstruction from two lateral shearing interferograms with Hilbert–Huang transform in monitoring of high power laser beam quality [10834-11]

Holographic optical element based digital speckle pattern shearing interferometer [10834-12]

Laser speckle photometry: an advanced method for defect detection in ceramics [10834-15]

Quantitative analysis of the agreement between scalar finite element simulation and pulsed TV-holography detection of the scattering of Rayleigh-Lamb waves in plates [10834-22]

Study of the cortical bone strength affectation due dehydration [10834-24]

Inspection of micrometric size semitransparent biological samples using a transmission digital holographic interferometer [10834-25]

Comparison between LED and LD as a light source for near-eye holographic display [10834-27]

Integration of relay optics in LED-based reflective off-axis digital holographic microscopy [10834-28]

Controlled compression test applied to composite materials reinforced with particles to predict fracture formation [10834-29]

Speckle imaging for monitoring the growth kinetics of Bacillus thuringiensis [10834-30]

Using spatial light modulator for correction of wavefront reflected from optically rough surface (Invited Paper) [10834-38]

A multidirectional system for shape measurement of a human body in motion [10834-41]

Wavefront complex modulation of semiconductor light sources via digital micromirror devices [10834-42]

Autofocusing method for holographic tomography of 3D samples with large axial thickness [10834-46]
Analysis of computerized aided designed and manufactured dental occlusal ceramics with multi-wavelength digital holography [10834-50]

Enhancing spatial resolution of two-wavelength digital holographic microscopy using speckle patterns generated from ring-slit apertures [10834-51]

Wavefront division off-axis digital holography microscopy on chip [10834-54]

Comparison between process simulation and deformation measured by defocused speckle photography [10834-57]

Tyres shoulder section characterization by means of ESPI [10834-59]

Combined optical coherence tomography and spectral technique for detection of changes in eggshells caused by Mycoplasma synoviae [10834-61]

Quantitative analysis of elasticity changes in UV radiated skin [10834-63]

Preprocessing of raw data for quality enhancement of the pointwise dynamic speckle analysis [10834-65]

Feasibility study of investigation of skin at cellular level by digital holographic microscopy [10834-69]

Sinogram cleaning procedure for optical diffraction tomography [10834-70]

Characterization of 3D phantom for holographic tomography produced by two-photon polymerization [10834-71]

Investigation of temporal response in finger blood flow and concentration change in occlusion test on human arm using bio-speckle patterns [10834-74]

Optical vortex application for a secure optical system [10834-75]

Redundant Haar wavelet regularization in sparse-view optical diffraction tomography of microbiological structures [10834-76]

Multi-modal quantitative analysis of HeLa cells using digital holographic microscopy and confocal laser scanning microscopy [10834-77]

Tomographic flow cytometry of circulating human breast adenocarcinoma cells [10834-79]

Processing of binary fringe patterns obtained by phase-shifting time-averaged shearography on vibrating objects [10834-80]

Multimodal DIC-thermovision investigations of polymer structural sandwich composites exposed to high energy laser beam [10834-83]

Speckle suppression and error reduction by synthesis and display of multiple kinoforms with sparsed image implementing dummy-area technique [10834-84]
Imaging through turbid media with wavefront modulated illumination full-field optical coherence microscopy [10834-86]

Scanning errors in holographic tomography [10834-90]

Modified variational image decomposition algorithm aided by the Hilbert transform as an alternative to 2D Hilbert-Huang transform for fringe pattern phase retrieval [10834-93]

Depth-of-field characteristic analysis of the imaging system with scattering medium [10834-94]

Height reconstruction algorithm for multi-incidence digital holography [10834-95]

The method of acquiring and processing 3D data from drones [10834-97]

Grating (moire) interferometry with decreased sensitivity [10834-100]

Dynamic speckle interferometry of technical and thin biological objects [10834-101]

Imaging dynamic objects hidden behind scattering medium by retrieving the point spread function [10834-102]

Histogram based hologram binarization for DMD application [10834-104]

Numerical model of diffraction effects of pixelated phase-only spatial light modulators [10834-106]

Extensive microstructural quality control inside a machine tool using multiwavelength digital holography [10834-107]

Phase shift strategies in phase shifting time averaging interferometry for harmonic motion measurements [10834-110]

The dynamic speckle-based wavemeter [10834-115]

Multiwavelength digital holography: height measurements on linearly moving and rotating objects [10834-119]

Inspection of mechanical surfaces with polarized structured light [10834-128]

An adaptive optics 3D STED microscope for super-resolution imaging of thick samples with background noise suppression using digital image processing [10834-134]
| 10834 2U | Study of the degradation process of glass-ionomer cements by analysis of speckle field dynamics [10834-35] |
| 10834 2V | Monitoring the hardening kinetics of glass-ionomer cements using temporal correlation of speckle patterns [10834-32] |
### Authors

Numbers in the index correspond to the last two digits of the seven-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first five digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Conference Committee

Conference Chairs

Malgorzata Kujawińska, Warsaw University of Technology (Poland)
Leszek R. Jaroszewicz, Wojskowa Akademia Techniczna im. Jarosława Dabrowskiego (Poland)

International Scientific Committee

Armando Albertazzi Gonçalves Jr., Universidad Federal de Santa Catarina (Brazil)
Anand Krishna Asundi, Nanyang Technological University (Singapore)
George Barbastathis, Massachusetts Institute of Technology (United States)
Chau-Jern Cheng, National Taiwan Normal University (Taiwan)
Peter J. de Groot, Zygo Corporation (United States)
Angel Doval, Universidad de Vigo (Spain)
Pietro Ferraro, Istituto di Scienze applicata e Sistemi Intelligenti (Italy)
Cosme Furlong, Worcester Polytechnic Institute (United States)
Marc P. Georges, Université de Liège (Belgium)
Yoshio Hayasaki, Utsunomiya University Center for Optical Research & Education (Japan)
Sen Han, University of Shanghai for Science and Technology (China)
Jonathan M. Huntley, Loughborough University (United Kingdom)
Björn Kemper, Westfälische Wilhelms-Universität Münster (Germany)
Byoungho Lee, Seoul National University (Korea, Republic of)
Peter Lehmann, Universität Kassel (Germany)
Ignacio Moreno, Universidad Miguel Hernández de Elche (Spain)
Wolfgang Osten, Institut für Technische Optik (Germany)
Giancarlo Pedrini, Institut für Technische Optik (Germany)
Pascal Picart, Laboratoire d’Acoustique de l’Université du Maine (France)
Fernando Mendoza-Santoyo, Centro de Investigaciones en Óptica, A.C. (Mexico)
Leszek Salbut, Warsaw University of Technology (Poland)
Peter Schelkens, Vrije Universiteit Brussel (Belgium)
Joanna Schmit, 4D Technology Corporation (United States)
Mikael Sjödahl, Luleå Tekniska Universitet (Sweden)
Pierre R. Slangen, Mines Alès (France)
Robert Słtńik, Warsaw University of Technology (Poland)
Mitsuo Takeda, Utsunomiya University Center for Optical Research & Education (Japan)
Cristina Trillo Yáñez, Universidad de Vigo (Spain)
James Davis Trolinger, MetroLaser, Inc. (United States)
Mario A. P. Vaz, Universidade do Porto (Portugal)
Ichirou Yamaguchi, RIKEN (Japan)
Toyohiko Yatagai, Utsunomiya University Center for Optical Research & Education (Japan)
Fucai Zhang, Southern University of Science and Technology of China (China)

Local Organizing Committee
Michał Józwik, Warsaw University of Technology (Poland)
Maciej Wieczorek, MW ScienceMeetings (Poland)
Introduction

Dear Friends and Colleagues,

It is our pleasure and privilege to welcome you to Poland at the International Conference on Speckle Metrology, Speckle2018. The conference is held in Janów Podlaski, in Bishop’s Castle dating back to the 15th century, recently transformed into a modern conference and leisure center and close to the Janów stables – the most famous Arabian horse breeders in this part of Europe.

Speckle2018 is the 7th in the series of the conferences started in 2000 in Lausanne and followed by Speckle Metrology 2003 in Trondheim (Norway), Speckles. From Grains to Flowers 2006 in Nimes (France), Speckle Fields Forever 2010 in Florianopolis (Brasil), Speckle Metrology in Vigo (Portugal), Laser Speckle 2015 in Guanajuato (Mexico). For 18 years the speckle and optical metrology community from all over the world has gathered at Speckle Conferences to present their latest research, share information of current advancements in the field and set the future directions of research, development of commercial instrumentation and applications.

During Speckle2018 we are delighted that several top international experts shared their knowledge and experience with all participants. Let us name two of them:

Professor Wolfgang Osten presented the keynote speech “Optical metrology - the long and unstoppable way to become an outstanding measuring tool”, which shows continuous progress in bridging between science and industry which is granted by optical metrology, while Professor Mitsuo Takeda’s invited talk takes us for the journey “Noise Inspired Research – a Journey Through Speckle Driven Years”. The other invited talks and presentations cover a wide range of research starting from phase retrieval techniques, theory of speckle and noise in optical data, new approaches to optical data capture and representation, digital holography and tomography, computational imaging and applications of optical methods in natural and life science and in engineering.

The Speckle2018 conference gathers scientists, engineers and students from 19 countries. We believe that the conference provides a stimulating environment for discussions and exchanging ideas during either the formal activities or the informal meetings, as well as the multiple social events. The meeting is an excellent opportunity to meet with old friends and establish new contacts at a beautiful place in Poland. Hopefully, it will be the starting point of many new joint ventures, research projects and friendships. We hope you enjoy the meeting.

Małgorzata Kujawińska
Leszek R. Jaroszewicz
